SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY, SEPTEMBER 29 1945

HEARD AT HEADQUARTERS

Medicine and the Changing Order

The New York Academy of Medicine recently set up a committee to study the economic and social changes of the present time and how these are likely to affect medicine. The committee includes many prominent medical men in New York and also representatives of labour, industry, law, and the Church. It has set about its objectives by a series of conferences held every week, at which economists, sociologists, historians, publicists, bankers, industrialists, and others, as well as doctors, deliver addresses on subjects on which they are expert. Already 54 such weekly conferences have been held. The subjects have included the Beveridge plan, the public's attitude towards the medical profession, the general problems of social change, medical education, health insurance plans, the problems of rural medicine, what labour wants in the way of medical care, the problems of the negro physician, the prospects of psychiatry, public health nursing, and many others. Only one of the speakers so far has been from this side of the Atlantic—Prof. J. M. Mackintosh, who addressed a conference on problems of rural medicine. It will be some time before the committee is able to put forward any final recommendations, but with such a background they should be weighty when they do appear.

The B.M.A. Conversations

The B.M.A. conversations with Mr. Willink still rankle with some people in the Labour movement. One speaker at the Trades Union Congress, Miss D. M. Elliott, of the General and Municipal Workers Union, in pleading the need for more health visitors, said that she hoped the new Minister of Health would never forget that the health of this country did not depend on the B.M.A. or on doctors generally. It depended on many other people, all working together in a common service—health visitors, nurses, domestic workers and auxiliary staffs of hospitals, and women public health officers. The provision of more health visitors, she said, had been delayed by the prolonged discussions of the B.M.A. with the late Minister of Health—discussions which should never have taken place or have been so prolonged. People had been waiting to go into tuberculosis institutions or had been suffering because of the long hours which nurses, especially in mental hospitals, were having to work, while the Minister of Health " dillied and dallied," discussing the new service with the doctors, as though they were the only people who mattered. That is all very well, but now the new Minister of Health, in his first speech as Minister, has forecast discussions—long discussions—with the doctors before the health scheme takes final shape.

Chairs in Industrial Medicine

At the instance of the National Union of Railwaymen the Trades Union Congress passed a resolution calling for the establishment of more chairs of industrial medicine at the universities and also for a wide extension of the medical curriculum to cover industrial diseases. The mind of Congress was evidently very much exercised on this subject. It was urged as a matter of supreme importance that examining surgeons and medical referees should be expert in the particular diseases with which they had to deal, especially industrial dermatitis. The resolution was supported by Dr. H. B. Morgan, M.P., who said that when it was complained that certifying factory surgeons and medical referees knew little about industrial diseases it ought to be remembered that they were taught nothing on the subject. There were lectureships in industrial diseases in only three of the medical schools in this country, and those who had to deal with such diseases had mostly to learn by experience. A member of the Mineworkers Union painted a dire picture of health and safety conditions in the mining industry. He said that in 1938, with 781,000 men employed in that industry, there were 131,776 cases of injury or disease incapacitating the men for more than three days, but in 1943, although in the meantime the numbers employed in the industry had fallen to 707,000, these cases had risen to 173,000.

Medical Costs

Some loose thinking on the subject of medical costs is rebuked in an American publication. It is pointed out that the real problem in the costs of medical care is often not understood. Efforts are commonly directed towards a reduction of the costs of the treatment of an active illness, generally towards a lowering of the fees paid to doctors or the charges of the hospital or other agencies involved, and it is not realized that these do not affect the more important cost factors. " In the long run real economy in medical care derives from the quality and competence of the treatment given rather than from the expenditures in a given illness." Therefore, if illness be treated competently and effectively the ultimate expenditure on medical care over a period may be appreciably reduced, even though the costs of the treatment of the immediate illness are higher. Thus it is pointed out that a reduction in the costs of medical care is not necessarily achieved by lowering the fees of those concerned, but rather by having fewer sickness expenditures on account of a lowered incidence in illness which comes about as the result of competent medical care and treatment. It seems elementary economics when stated in that way, but it is a thing too often forgotten.

T.U.C.'s Call for Research

Trade unionists are emphasizing the importance of science and research, partly with a view to combating industrial diseases, but not in the medical field alone. At the recent Trades Union Congress at Blackpool one member, Prof. P. M. S. Blackett, F.R.S., who was associated with Rutherford at the Cavendish Laboratory in the early days, pleaded for the setting up by Congress of a scientific committee to advise it on problems of scientific interest to the trade union movement, a proposal which was accepted unanimously. As an instance of the need for research, a delegate representing the Chemical Workers Union declared that as much as two-thirds of the possible output of penicillin in this country is wasted because of failure to prevent impurity, whereas in American penicillin factories, thanks to special measures such as the use of rubber mats which extract all the dust and dirt from workers' shoes, the production of a sufficiently pure penicillin is greatly increased. Congress called upon the Government to subsidize industrial research and to set up a national research and development council with powers to control patents and to improve scientific and technical education in the schools.

The late Mr. Bishop Harman

At a meeting of the National Ophthalmic Treatment Board on Sept. 14, the chairman, Dr. David Wilson, reporting the death of Mr. Bishop Harman, said that the Board would remember his long services, his enthusiasm and drive, his commanding presence and eloquence, his quickness in seizing a point and ability in argument, his gift of inventing instruments connected with his branch of the profession, and his work for the blind and the L.C.C. schools. He was an active pioneer in all he undertook. Dr. Wilson then asked the Board to stand for a moment in respect for Mr. Bishop Harman's memory, and then moved that the following be placed on the Minutes:

> " The Board places on record its sense of the irreparable loss it has sustained by the death of Mr. Bishop Harman. More responsible than any other single individual for the inception of the National Eye Service, he was its chairman and inspiration from its beginning to within a year of his death. During that time he placed freely at the disposal of the Board his great gifts and his high status and influence in the ophthalmic world and in the B.M.A. with the enthusiasm so characteristic of him. The Board gratefully pays this last tribute to one who by his long and unselfish labours earned the implicit confidence and respect of all who worked with him."

NATIONAL HEALTH INSURANCE IN CHILE

Chile claims to be the first country in the Western Hemisphere to introduce national health insurance. This it did in 1924, when a compulsory insurance fund was created to which all manual workers, both men and women, in industry, commerce, agriculture, domestic service, and self-employment were affiliated. This fund is financed by the employers, who contribute 5% of their wages bill, the wage-earners, who contribute 2½% of their wages, and the State, which contributes a further 1½%. The fund finances sickness and medical benefits, including periodical health examinations under a Preventive Medicine Act passed in 1938, and also cash benefits during maternity and sickness. The maternity cash benefit is equal to 50% of the wages during the six weeks before and the six weeks after childbirth, together with a lactation benefit, equal to 10% of the wages, payable for one year. The fund further provides old-age and death benefits.

General and special medical treatment is given under the fund, together with pharmaceutical, dental, and hospital care; the maternity benefit includes wives of insured men, and medical care is also provided for children under the age of 2. The fund is administered by a board comprising three representatives of employers, three of insured persons, and one representative of the Chilean Medical Association, which is the Chilean counterpart of the British Medical Association. The chairman of the board is the Minister of Health, who by tradition is a doctor, and the chief of the State Social Insurance Department, likewise a doctor, is also a member of the board. The medical service is directed from a headquarters whose chief medical officer not only discharges the administrative functions but also determines the policy to be followed in the different sections of the service. There is also a medical director in each province.

Chilean Health Centres

Medical care is furnished through health centres which are classified as clinics of the first, second, and third class, first-aid centres, remote rural posts, hospitals, sanatoria, convalescent centres, prophylactic centres, and other special establishments. The first-class clinics are situated in the larger cities and provide complete care for all kinds of persons, and look not only to the curative but also to the social and preventive aspects of medicine, and are equipped with ancillary technical services. The second-class clinics are established in towns with fewer than 10,000 inhabitants, and the third-class meet the local needs of small distant settlements, confining their work to general medical care and the care of mothers and infants. The rural medical posts are situated deep in the "back" areas, and are visited periodically by a general practitioner and occasionally by specialists and dentists. When a patient needs hospital care he is admitted under certificate of the clinic doctor to one of the hospitals of the Administration of Public Charities and Social Assistance, which is a public authority owning almost all the hospitals in Chile and one of the main organizations of social medicine in the country. The compulsory insurance fund is in contract with this organization and meets patients' costs.

Health insurance covers more than 1½ million people in Chile, or 90% of the working population. Medical care is furnished through 183 clinics and 519 rural medical posts, and just upon 1,000 doctors are employed.

Under the Preventive Medicine Act all persons affiliated to social insurance are compulsorily subjected to a periodical, gratuitous, and systematic medical examination. They may be ordered preventive rest—that is, abstention from work—when a doctor considers this necessary as a means of averting serious illness; during this time they receive payment of benefit, and at the end of the period they are entitled to return to their previous post. To finance this benefit 2½% is set aside from the gross revenue of the insurance fund, and the employer contributes an additional 1% on the wages.

The Doctor's Status

The medical practitioners who serve the social insurance scheme are paid salaries in proportion to the number of hours they work. Some are employed full-time. They are classified in a scale of rank, to each degree of which a specified salary attaches, and this scale of rank, together with length of service and merit, is taken into account for the purpose of granting increments of salary or filling vacancies. The basic hourly salary is increased for a chief of the clinic or one who is assigned to a rural or difficult area. Special allowances are made to tuberculosis experts, radiologists, and other specialists. Other salaried work, such as a post in the public health service or in a hospital, is allowed under certain conditions, and private practice is also permitted outside the hours of service. The doctors are themselves insured in the social insurance institution, and thus are eligible for invalidity payments and old-age and survivors' pensions, and can obtain personal loans and mortgages. Postgraduate courses are organized from time to time, and the insurance institutions arrange, when circumstances permit, for a practitioner to travel abroad for postgraduate study. Practically all the doctors in Chile to-day are officials either of social insurance, of the public health department, or of the hospital administration.

At the beginning of the social insurance scheme medical benefit was furnished by doctors, following the methods of private practice, and freedom of choice was afforded. But it was found under this arrangement that no medical care could be provided for rural areas where there were no resident doctors and the patient was unable to travel to the nearest centre of population. The system was therefore abandoned, and medical officers were appointed to semi-rural areas with the responsibility of visiting the remote districts, and finally this intermediate stage was exchanged for the organization described above.

For the information on the Chilean medical service we are indebted to an article in the *Canadian Medical Association Journal* of December, 1944, by Manuel de Viado, M.D., Chief of Vital Statistics Section, Administration of Public Welfare and Social Assistance, Chile, and Alejandro Flores, late secretary to the Minister of Health, Chile.

Correspondence

Release of Air Force M.O.s

SIR,—Why is the release of medical officers from the Services still so inordinately slow? If I am a voice crying in the wilderness please inform me, and I will cease. But I do not think I am alone, as the same question has been on the lips of all Service medical officers, whether Army or Air Force, whom I have met since Japan surrendered.

We in the Air Force have been officially notified in to-day's Station Routine Orders, nearly a month after VJ-Day, that the "Air Ministry have decided to speed up release of medical officers" to the extent of releasing up to Group 20 by February, 1946. This is the last straw to a normally submissive and peace-loving member of the profession, who has had over five years' war service in the R.A.F.V.R. I feel bound to protest against this snail-like progress in releasing medical officers, which makes a hollow mockery of the phrase "speed-up."

We have been instructed by a signal from headquarters immediately to complete medical examination prior to release (and also inevitably the accompanying Forms 2561 in duplicate) up to and including all personnel in Group 26. This indicates that in most branches and trades of the R.A.F. Group 26 may expect release in the very near future, since Forms 2561 are to be completed, as nearly as possible, just prior to release lest attributable illness or accident subsequently alters the health records of the individual and raises new possibilities of claims for pensions. But medical officers, even long after Japan has well and truly surrendered, may expect Group 20 to be released in February, 1946.

Is it not time that this discrimination against our release be removed by the firm and swift action of the Central Medical War Committee? The cry is for new medical recruits to enable M.O.s to be released. Yet I look in vain in the *Journal* for any substantial increase in strength for the R.A.F. A tiny trickle of new flying officers is occasionally listed, but gone are the days when war forced the pace and 15 to 20 new M.O.s joined the R.A.F. each fortnight. Are we not interested in winning the peace? Cannot the same urgency be employed in reverse?

Whatever Service chiefs may say about the necessity for a proportion of 2.3 doctors per 1,000 Service personnel, the fact remains that there is a gross waste of qualified medical man-power in the R.A.F. To quote the obvious example of this station and a near-by Group Headquarters which I know well, there are four M.O.s on this station of 1,200, when *one* could do all the necessary medical work *and* also have nearly every afternoon off; at Group Headquarters there are *six* M.O.s—one Group Captain, one W/Cmdr., three S/Ldrs., and one F/Lt., none of whom is a fraction as busy as the average general practitioner. Everyone knows (the lay public as well as the Central Medical War Committee) that doctors are far more urgently needed in civilian practice than in the Services. Yet here we remain, in our thousands, half employed and yet the most slowly released of all branches.

The courtesy of your columns to publish these facts and opinions would be more than usually appreciated, since serving over-seas one does tend to feel remote and powerless, and a truthful and fearless answer to the questions asked, which are of moment to us all, would be an excellent stimulus to the flagging morale of many of us in all the Services.—I am, etc.,

"SQUADRON LEADER, R.A.F.V.R."

Classification for Release

SIR,—May I suggest that, if medical officers are to be released on a different system from other members of the Forces, a method of classification is adopted which takes more account of "service" and less of "age" than the Age and Service Group does at present. Surely six years is long enough for any man to be in the Army, and if we are not to be allowed out in our proper turn then a time limit should be made, and after, say, six and a half years of military service the medical officer should be allowed out no matter what group he may belong to.—I am, etc.,

D. TURNER,
Ibadan, Nigeria. Lieut.-Col., R.A.M.C.(T.A.).

Demobilization of Doctors

SIR,—A great deal has been said in the medical and lay press on demobilization of doctors. Some excellent letters have appeared in both the *Journal* and the *Lancet*, stating the case of the serving M.O. Most of these letters point out that there are large numbers of M.O.s with little work to do—a fact which can be verified statistically (weekly returns) as well as by inquiry from unselected M.O.s. Just one more example.

This unit runs a C.R.S. in Germany. It has beds for 30-odd patients. We do sick parades for our own unit and any stray detachments of pioneers, R.A.S.C., etc., in the neighbourhood. The average number of "in-patients" is 12 to 15. On sick parades we see no more than another 10 to 15 a day, usually fewer. And we have *four* medical officers and over 80 O.R.s. We have done little to justify our existence since the end of April. The four artillery units in this area, from whom we receive our "in-patients," each has one M.O. I have done the sick parades for two of the units during the absence of the R.M.O.s on leave; average daily sick were about 6 in each case. That and "other commitments" certainly do not give more than two hours' work a day for even the most conscientious. As I have moved through a considerable area of the British zone in Germany since April I know that the position here is not exceptional.

Mr. Bevan's statement in reply to Sir John Mellor on Aug. 23 (*Journal*, Sept. 1, p. 305) should not go without comment. Really, Mr. Bevan! According to his figures the ratio of doctors in the B.L.A. compared to doctors at home is slightly more than 6:1—namely, one doctor for 2,576 civilians at home and 1 doctor for 409 troops. He states that we have "considerable additional commitments to displaced persons and others." Have we, though? The number of D.P.s is gradually dwindling, and in any case they are mostly taken care of by D.P. doctors and German doctors. By "others" I presume Mr. Bevan means German civilians. They are definitely not our responsibility, as 21 Army Group has repeatedly pointed out, and there is no shortage of German doctors in most areas. Last, but not least, I should like to point out that Mr. Bevan has apparently completely overlooked the fact that soldiers are the fittest and healthiest of the nation—in other words, say, 1,000 soldiers have a much lower sickness rate than 1,000 civilians, who include babies, pregnant mothers, aged and infirm persons.

Every M.O. I have spoken to is convinced that speedy revision of War Establishments is called for. There is no longer any need for regiments to have R.M.O.s; one M.O. could quite easily look after two or three regiments, be they infantry or artillery. As in 1940 at home, they could very easily do the "milk rounds" in an Army vehicle, and both civilian and Service needs would be satisfied, to say nothing of M.O.s themselves.—I am, etc.,

"CAPTAIN, B.A.O.R."

Emigration a Solution?

SIR,—As a serving medical officer who is more than a little tired of our Government's "Nazi" attitude to the medical profession in general and serving medical officers in particular, I would be grateful if you could, through the medium of the *Journal*, give me information relative to facilities which might be available to medical officers who wish to emigrate on their demobilization.

An account of the possibilities of practice in the U.S.A., Canada, and South Africa would be especially welcomed by myself and many of my Service colleagues who feel that the reward for our service is to have imposed on us what we fought against.—I am, etc.,

"SURG. LIEUT., R N.V.R."

The Silent Service

SIR,—I wish to express my thanks for your frequent publication of letters from doctors with demobilization depression. They must make dull reading for those who are not in chains, but each one brings a little light into the bleak outlook of the sufferers. One feels, one day, that the walls of Jericho may fall and that each and every one must blow a little on his trumpet.

I am one of the saddest cases, a Naval medical officer. I see that the War Office and the Air Ministry have announced their programme of demobilization up to the early months of next year. Knowing some of the difficulties, I congratulate them. There is an ominous silence from the Admiralty, but fortunately it is becoming conspicuous. I am disappointed that the Central Medical War Committee have not commented on the gentlemen "who are conspicuous by their absence." It gives the very wrong impression, I hope, that this can go on for ever without that body protesting. I am sure this cannot be.

Holding tightly on to my sanity, I return to look for my latest textbook, hidden under a pile of "wait for it" A.F.O.s, to read about the diseases that occur in a land so far away.—I am, etc.,

"SURG. LIEUT.-CMDR, R.N."

Balancing the Issues

SIR,—As an E.M.S. officer I do not think the Service M.O.s are being quite fair in suggesting that E.M.S. personnel could replace them in the Forces. In the first place, as stated recently in the *B.M.J.*, the number of E.M.S. officers is very small compared with the number of Service M.O.s, and could only replace a small fraction of them. We also have not had free choice of job, nor the freedom to change our job or to take the varied house-jobs in hospitals which we should have been able to do in peacetime. As to time for reading and study, I know that many Service M.O.s have very little medical work to fill in their time, and so should have more time free for study. This lack of work probably also accounts for the feeling of frustration which so many have. It is true that we have been in the U.K., but many have been away from home; and I believe many Service M.O.s have also spent a long time in U.K. hospitals. We have been treating Service patients in the same way as if we had been in the Forces.

I do not wish to be selfish, but to have each side considered fairly. Many E.M.S. officers have wished to join the Forces but have been unable to obtain permission. At the same time, now that the war is over, the needs of the Forces must decrease, as the need to cover large numbers of casualties has gone. At this time it will be hard on the civilian practitioners, except the newly qualified, to be conscripted to military service. May I suggest the following points which might solve the problem and yet be fair to all:

1. Better distribution of medical man-power in the Forces, so that the existing establishment may be reduced and all M.O.s can have sufficient *medical* work. The return of alien doctors to their own countries and the use of civilian doctors for troops billeted in their district, or the use of Service M.O.s to assist civilian G.P.s might also help, thus releasing many Service M.O.s.
2. Return of voluntary recruitment for all doctors except perhaps the newly qualified; the latter could be asked to do a maximum of one or two years' military service.
3. Use of E.M.S. hospitals to absorb the overflow from civilian hospitals until better hospital accommodation is provided for all.

—I am, etc.,

Cheshire. "E.M.S. OFFICER."

Women Doctors in the R.A.M.C.

SIR,—In the *Supplement* of Aug. 25 (p. 51) Dr. Janet Campbell made known the Minister of Labour's decision to discontinue compulsory conscription of women doctors. During the war years women doctors have, so far as possible, been treated on an equal basis with the men, and this has included compulsory conscription. Consequently those of us attached to the R.A.M.C. were not surprised to find that we were to be demobilized as doctors and not as women. Although this involves a considerably slower rate of demobilization, we considered it to be perfectly fair.

Now, however, we learn that there is to be no further compulsory conscription for women. This not only reduces the number of civilian doctors available to replace Army medical officers and thus speed up demobilization, but it places the younger men and women of the R.A.M.C. at an unfair disadvantage. Our contemporaries who have remained in civilian life are already far ahead of us in experience and higher qualifications. This is the luck of war, and as many of us are volunteers it is inevitable. In one or two years' time, however, when the men and women who were conscripted within a few months of qualification do finally return to civilian life, it will be very hard for them to find that they have to compete with young women doctors qualifying now, after the cessation of hostilities.

and having the advantage of two years' normal medical experience.

May we women doctors with the R.A.M.C. plead that all women doctors should be treated in the same way. If civilian medical women are now to be treated as women, may women members of the R.A.M.C. also be treated as women and demobilized accordingly.—We are, etc.,

J. W. PAUL, Capt., R.A.M.C.
C. P. LARKINS, Capt., R.A.M.C.
K. E. RYMER, Capt., R.A.M.C.
M. P. ELMAN, Capt., R.A.M.C.

110 (BR) General Hospital,
B.A.O.R.

The Doctor at Home

SIR,—This morning an E.N.T. surgeon informed me that the R.A.M.C. doctors whom he had met were under the impression that the civilian doctors did not want them back as they wanted to keep the "magnificent" fees they had earned, that there were no practices for them, and that their services were belittled. I feel very strongly this erroneous idea should be contradicted at once. I believe I am expressing the opinion of the great majority of general practitioners when I say that we do want them back badly; we have shared with those on service the "magnificent" fees we have earned by the sweat of our brow. There are many aged medical men "hanging on by their eyelids," longing to retire and be relieved by younger men from the Forces, and those of us around 60 years of age are tired out and require a respite. We have applied to our Alma Mater for a young energetic doctor to join us, and we are informed that they are snapped up as soon as they are demobilized.

With reference to belittling their services, etc., many of us served in World War No. 1. We remember the tedium of having little or no clinical work to do, then the rush of a battle, the red tape, the separation from wife and children, and the working under trying conditions: probably their conditions were worse than ours. No, I repeat we do not belittle their services, and we want them back.—I am, etc.,

"G.P., 58."

How Many for How Much?

SIR,—The Spens Committee will shortly be issuing their report. We shall then be informed how much a doctor has been earning and, presumably, how much he should be allowed to earn in the future. This may or may not be helpful to the Minister of Health responsible for the new Act, but if the new health service is to be of any real value to the community there is another aspect of the question of remuneration which must be faced.

Why is it that any suggestion that the new health service should be based on the National Health Insurance Act is not well received in official circles? Surely it is because there is a very definite opinion in the country to-day that the insured person is not getting the best medical service that it is possible for him to get. Those of us who have been trying to give it him, if we will face the facts honestly, will agree with this contention. We know through bitter experience that it is a physical impossibility to carry out our work honestly and conscientiously under the system of "mass medicine" into which the National Health Service has degenerated.

The Spens Committee may tell us how much we may expect to earn, but if the new Act is to succeed there must be a strict limitation of the number of patients any doctor is allowed to take on his list, and the capitation fee must be adjusted to this figure.—I am, etc.,

Oswestry. W. B. A. LEWIS.

BRITISH MEDICAL ASSOCIATION

Ogier Ward, F.R.C.S., at 149, Harley Street, W.1.

POSTGRADUATE NEWS

The regulations for the Diploma in Medical Radiotherapy of the English Conjoint Board require a course of study extending over two years. During the first nine months candidates are required to attend a course of systematic instruction; the rest of the time must be spent in the radiotherapeutic department of a recognized hospital. To meet these requirements a course of instruction will begin at the Holt Radium Institute, Manchester, early in January, 1946. Lectures and practical demonstrations will be given in the following subjects: Physics as applied to radiotherapy, biological effects of radiation, pathology in relation to radiotherapy, principles and practice of radiotherapy. Inclusive fee 50 guineas. Thereafter it is hoped that paid posts will be found for candidates in radiotherapeutic departments where they may complete the attendance required by these regulations. Further information may be had from the Dean of the Medical School, University of Manchester. All applicants must attend for interview before being accepted for the course. Special consideration will be given to practitioners being demobilized.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male. W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

NORTH OF ENGLAND JOINT CANCER COMMITTEE.—The above named Joint Committee is prepared to receive applications for the appointment of ASSISTANT RADIOTHERAPIST from registered medical practitioners. In accordance with the present practice of constituent authorities the post is of a temporary character. The person appointed will work under the direction of the Director of the Organisation. The commencing salary is within the scale £900 to £1,200 according to experience, rising by annual increments of £100 to a maximum of £1,200. The appointment is whole time, and private practice will not be permitted. Terminable by three months previous notice in writing by either side. The appointment is conditional upon the successful candidate passing a medical examination for the purposes of the Local Government Superannuation Act, 1937. Applications giving particulars of experience and names of not more than three persons to whom reference may be made as to the suitability of the applicant for the post, should reach me within 14 days of the date of appearance of this advertisement. Canvassing, either directly or indirectly, will disqualify a candidate.—John Atkinson, Town Clerk and Hon. Secretary of the Joint Cancer Committee, Town Hall, Newcastle-upon-Tyne.

CORPORATION OF ABERDEEN. Woodend Hospital.—LABORATORY ASSISTANT, male or female, required to undertake routine clinical biochemistry and haematology at Woodend Hospital, Aberdeen. Salary, £215 per annum, rising by annual increments of £10 to £235 per annum, with war bonus in addition. The present rates of bonus are: male £60 per annum, female £48 per annum. The post is superannuable. Applications should be lodged with Dr. J. Smith, Public Health Laboratories, City Hospital, Aberdeen, on or before October 13, 1945.—D. B. Gunn, Town Clerk, Town House, Aberdeen.

COUNTY BOROUGH OF SOUTHEND-ON-SEA. Southend Municipal Hospital, Rochford, Essex. RESIDENT HOUSE MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident House Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be tenable for a period of six months, otherwise for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments, valued at £100 per annum, plus cost-of-living bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officers' Superannuation Acts are applicable. The post will become vacant on November 1, 1945, and forms of application can be obtained from the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex.—H. J. Worwood, Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF IPSWICH. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from registered medical practitioners for the above appointment. The possession of the Diploma in Public Health or an equivalent qualification will be an advantage. The salary scale is £600 p.a. rising by annual increments of £25 to £700, plus war bonus, and the successful candidate will devote the whole of his or her time to the duties of the office, under the direction of the Medical Officer of Health. The approval of the Minister of Health has been obtained for the appointment, and candidates should submit with their applications full information as to their liability for military service, medical fitness, and position as regards deferment. Applications, endorsed "Assistant Medical Officer of Health," should be forwarded to the Medical Officer of Health, Elm Street, Ipswich, at once.—A. Moffat, Town Clerk, Town Hall, Ipswich.

THE HERTFORDSHIRE COUNTY COUNCIL. The Lister Emergency Hospital, Hitchin, Herts (400 beds).—Applications are invited from registered medical practitioners for the following appointments—HOUSE PHYSICIAN (A), vacant November 3, 1945, and HOUSE SURGEON (A) vacant October 23, 1945. Salary at the rate of £150 per annum with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise it will be for a period not exceeding one year.

HOUSE PHYSICIAN and RESIDENT ANAESTHETIST (B2), vacant November 3, 1945. Salary at the rate of £200 per annum with full residential emoluments. R practitioners holding A posts may apply. The appointment will be for a period of six/months.

Applications should be sent immediately to Dr. P. J. W. Mills, Medical Superintendent.—P. Elton Longmore, Clerk of the County Council.

COUNTY BOROUGH OF SOUTHEND-ON-SEA.—Applications are invited from registered medical practitioners of either sex, including R and W practitioners who now hold A posts, for the following appointment at the Southend Municipal Hospital, Rochford, Essex: RESIDENT ASSISTANT MEDICAL OFFICER, (B2), duties mainly Obstetrics and Anaesthetics. The salary is at the rate of £325 p.a., with full residential emoluments, plus war bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officer's Superannuation Acts are applicable. The appointment will be limited to six months for R practitioners, otherwise for a period of one year, and subject to one months' notice on either side. This post becomes vacant on November 1, 1945. Application forms, obtainable from the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex, should be returned to him as soon as possible.—D. G. Fincham, Deputy Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF SOUTHEND-ON-SEA, Southend Municipal Hospital, Rochford. ASSISTANT RESIDENT OBSTETRIC OFFICER (B1).—Applications are invited from women practitioners for the post of Assistant Resident Obstetric Officer at the Council's Municipal Hospital, Rochford, (four miles from Southend-on-Sea), salary scale £400 × £25 to £500, together with full residential emoluments and war bonus amounting to £24 1s. per annum. Candidates should have had post-graduate experience in midwifery, and preference will be given to those possessing a senior qualification. In fixing the commencing salary, regard will be had to previous experience and qualifications. The Local Government Superannuation Act, 1937, will apply. Application forms obtainable from the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex.—D. G. Fincham, Deputy Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF BOLTON. Townleys Hospital, Farnworth. TEMPORARY ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered male medical practitioners for the above appointment. Suitably qualified R practitioners holding B2 appointments also R practitioners now holding B1 appointments and rejected by the R.A.M.C. may apply. An interest in obstetrics is desirable The salary will be at the rate of £350 p.a., plus bonus, with emoluments valued at £130 p.a. Application forms, which may be obtained from the Medical Officer of Health, Public Health Department, Civic Centre, Bolton, to be completed and returned, together with copies of two recent testimonials, to the undersigned as soon as possible.—Philip S. Rennison, Town Clerk, Town Hall, Bolton.

COUNTY BOROUGH OF BURNLEY. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from medical practitioners, either sex, for the above temporary position. Persons already in whole-time public health employment by local authorities will not be eligible to apply. The duties will be mainly in connexion with the School Medical Service but will include maternity and infectious diseases. Salary £500 per annum rising by £25 per annum to a maximum of £700 per annum plus bonus of at present £59 16s. Conditions of appointment and forms of application may be obtained from the Medical Officer of Health, St. James's Street, Burnley, to whom applications must be returned as soon as possible.—Archibald Glen, Town Clerk, Town Hall, Burnley.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE. County and Emergency Hospital, Otley (296 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of a RESIDENT MEDICAL OFFICER (B2), vacant now, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be for a period not exceeding one year. The salary is at the rate of £200 per annum, with full residential emoluments. Applications should be submitted to the Deputy Medical Officer, County Hall, Wakefield.—Bernard Kenyon, Clerk of the County Council, County Hall, Wakefield.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D. Storey, Town Clerk, City Hall, Norwich.

CITY OF STOKE-ON-TRENT. City General Hospital. Appointment of SENIOR ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of Senior Assistant Resident Medical Officer (B1) at the City General Hospital, Stoke-on-Trent (1,200 beds). Applicants should have held house appointments and had surgical experience. Suitably qualified R practitioners, holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary £350 per annum rising by annual increments of £25 per annum to £450 per annum, plus bonus and residential emoluments. Local Government Superannuation Act, 1937, applies. Appointment subject to one month's notice on either side. All fees receivable to be paid to the Corporation. Applications endorsed "Senior Assistant Resident Medical Officer, City General Hospital," to be sent to the undersigned as soon as possible.—Harry Taylor, Town Clerk.

CITY OF LEEDS. Public Health Department. St. Mary's Infirmary. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male, for the post of Resident Medical Officer (B2) for the above hospital, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. Preference will be given to candidates who have held an A post in a maternity hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The Hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part I Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid in to the City funds. Applications, endorsed "R.M.O.," to be forwarded to the undersigned.—J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

CITY OF LEICESTER. City General Hospital, Gwendolen Road.—Applications are invited from registered medical practitioners, for the appointment of RESIDENT HOUSE SURGEON (A). Duties, obstetrical, gynaecological and surgical. Salary is at the rate of £200 p.a. with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months, otherwise will not exceed one year. Applications (on forms supplied) must be submitted as soon as possible, endorsed "House Surgeon, City General Hospital" and addressed to, E. K, Macdonald, Medical Officer of Health, City Health Department, Grey Friars, Leicester.

COUNTY BOROUGH OF HALIFAX. Isolation Hospital (100 beds). RESIDENT MEDICAL OFFICER (B1) (Temporary Appointment).—Applications are invited from registered medical practitioners for the above temporary appointment at a commencing salary of £350 per annum, rising, by annual increments of £25 to a maximum of £450, together with the usual residential allowances, valued at £150 per annum, and a temporary cost-of-living bonus of £29 18s. Candidates should be over military age or otherwise exempt from service with the Forces. The appointment is subject to the provisions of the Local Government Superannuation Act. The appointment will also be subject to one month's notice on either side. Applications must be received by the undersigned not later than Friday October 12, 1945.—G. C. F. Roe, Medical Officer of Health, Public Health Department, Powell Street, Halifax.

Applicants must reside within easy access of Home, which accommodates 50 adult women suffering from pulmonary tuberculosis.

Application forms obtainable from the Medical Officer of Health (S.D.2), County Hall, S.E.1. Stamped foolscap envelope necessary, returnable by October 8, 1945. Canvassing disqualifies.

LONDON COUNTY COUNCIL. Public Health Department. Consultant and Specialist Services. WHOLE-TIME THORACIC SURGEONS.—Applications are invited for permanent appointment to whole-time positions of (1) Chief Thoracic Surgeon and (2) Thoracic Surgeon, in the Public Health Department of the London County Council, mainly for work in the Council's sanatoria and medical tuberculosis hospitals, but also as may be required at any of the special or general hospitals. The Chief Thoracic Surgeon, in addition to surgical work, will be responsible for organizing all thoracic surgery in the Council's hospital service. Scales of salary: Chief Thoracic Surgeon, £2,000 by £100 to £2,500 a year, Thoracic Surgeon, £1,250 by £50 to £1,500 a year, plus cost-of-living addition (at present £60 a year for men, or £48 a year for women). There are no emoluments. If warranted by the status and experience of a selected candidate, appointment at a point higher than the minimum of the scale may be recommended. Forms of application, giving particulars as to conditions of appointment and service, obtainable (stamped addressed foolscap envelope necessary) from Medical Officer of Health (S.D.6.), County Hall, London, S.E.1. To permit of candidates in H.M. Forces serving over-seas being considered the latest date for the return of application forms has been fixed for January 28, 1946. If the selected candidate is subject to any restriction on the transfer of his service, or is engaged in National or essential Local Government Service, he will not be required to take up his new appointment until the restriction is removed. Canvassing disqualifies.

LANCASHIRE COUNTY COUNCIL. Public Health Committee. Abbotsfield Hospital, Flixton, Manchester. ASSISTANT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the above appointment including R and W practitioners who now hold A posts. If the successful applicant is an R practitioner the appointment will be limited to six months, otherwise it may be renewed for a further period of six months. Salary is at the rate of £300 per annum, together with an allowance of £150 per annum in lieu of residential emoluments. Forms of application may be obtained from the County Medical Officer of Health, Hospital and Medical Department, County Offices, Preston, to whom all applications must be forwarded immediately.—R. H. Adcock, Clerk of the County Council County Offices, Preston

---

BURSLEM HAYWOOD AND TUNSTALL WAR MEMORIAL HOSPITAL, High Lane, Tunstall, Stoke-on-Trent.—Applications are invited from registered medical practitioners, male and female, including R and W practitioners who now hold A posts, for the post of HOUSE SURGEON (B2). If held by an R or W practitioner the appointment will be limited to six months. Salary is at the rate of £225 per annum, with full residential emoluments. Applications should be forwarded as soon as possible to O. E. Lowndes, Secretary.

MIDDLESEX COUNTY COUNCIL. MEDICAL OFFICER (B1) (Resident) required at REDHILL COUNTY HOSPITAL, Edgware, Middx.—Applications invited from registered medical practitioners, including R and W practitioners holding B2 posts, who should preferably have held previous medical appointments. R practitioners holding B1 posts ineligible unless rejected by R.A.M.C. Salary £350 p.a., plus cost-of-living bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties, entirely medical, such as Council may require, under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months. Post vacant November 8, 1945. Applications to Medical Director, "Z," of Hospital. Closing date October 6, 1945.— C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

METROPOLITAN BOROUGH OF FULHAM. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited from qualified medical practitioners of either sex for the position of temporary Assistant Medical Officer and second Resident Medical Officer at the Council's Maternity Home. Salary £350 × £25 – £550 per annum, plus emoluments valued at £150 per annum, plus cost-of-living bonus. The commencing salary will be fixed at a point on the scale according to the previous experience of the successful candidate. Candidates already in whole-time public health employment by local authorities are not eligible for this position. Applications, setting out in tabular form particulars with regard to age, education, nationality, training, qualifications, and present and past appointments, with particular reference to obstetric experience and the salaries received in each case, accompanied by not more than three recent testimonials and endorsed "Temporary Assistant Medical Officer", must be received by me not later than than October 13.—Cyril F. Thatcher, Town Clerk, Town Hall, Fulham, S.W.6.

KINGSTON-UPON-HULL CORPORATION HEALTH DEPARTMENT. Anlaby Road Hospital (581 beds). TEMPORARY ASSISTANT MEDICAL OFFICER (B1).—Applications are invited for the above temporary appointment from registered medical practitioners of either sex. Salary £350 per annum, rising by annual increments of £25 to £450 per annum, plus war bonus, together with an allowance at the rate of £150 per annum in lieu of board, residence, and laundry outside the hospital. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Forms of application, etc., may be obtained from, and should be returned duly completed to, the Medical Officer of Health, Guildhall, Kingston-upon-Hull, at the earliest possible moment.

ASHINGTON HOSPITAL, Ashington, Northumberland.—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1). Applicants must be unmarried and have had a previous surgical house post, and preference will be given to candidates holding a F.R.C.S. degree. Salary will be according to experience and qualifications, with a minimum of £350 per annum. R practitioners holding B2 posts may also apply. Applications from practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Applications to be sent to the undersigned.—A. Anderson Bonar, F.R.C.S.Ed., Ashington Hospital.

BARNSLEY HALL EMERGENCY HOSPITAL, Bromsgrove, Worcestershire.—Applications are invited from registered medical practitioners, male and female, for the appointment of a B1 MEDICAL OFFICER to the Spinal Unit. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from male R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary is at the rate of £350 per annum with full residential emoluments. Applications should be addressed to the Medical Superintendent.

BRADFORD ROYAL INFIRMARY.—Applications are invited from registered medical practitioners, male single, for the posts of HOUSE SURGEON (B2), vacant now, and HOUSE PHYSICIAN (A), vacant October 17, 1945. Six months' appointment. In the case of the B2 post, R practitioners who now hold A posts may apply and for the A post practitioners within three months of qualification and liable under the National Service Acts may also apply. Salary £150 per annum, with full residential emoluments. There are 372 beds and 8 resident officers. Applications should be sent immediately to H. Trusson, House Governor and Secretary.

BURTON-ON-TRENT GENERAL INFIRMARY (200 beds normal).—Applications are invited from registered medical practitioners for the appointment of CASUALTY OFFICER AND HOUSE SURGEON (A). Salary at the rate of £200, with the usual residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months. Applications to be sent to the Secretary-Superintendent.

BRISTOL ROYAL HOSPITAL FOR SICK CHILDREN AND WOMEN (usually known as the Children's Hospital).—Applications are invited for the post of RESIDENT MEDICAL OFFICER (B2) from registered medical practitioners, including R practitioners who now hold A posts. Part of the duties of the Resident Medical Officer will be spent at Eastern House E.M.S. Children's Hospital, Weston-super-Mare. Salary according to experience, with a minimum of £125 per annum. If held by an R practitioner appointment will be limited to six months. Duties to commence immediately. Applications to be sent to the undersigned not later than October 6, 1945.—Reginald C. Thomas, F.C.I.S., Secretary.

BIRMINGHAM UNITED HOSPITAL. The General Hospital. The Queen Elizabeth Hospital (also incorporating the Queen's Hospital 1840-1941).—Applications are invited from registered medical practitioners, male or female, for the appointment of RESIDENT ANAESTHETIST (B2) at the General Hospital, including R and W practitioners who now hold A posts. The appointment is for six months and is a recognized resident anaesthetist post for the purpose of taking the Diploma in Anaesthetics. Candidates from the Forces will be specially considered. Salary £100 to £120 p.a., according to experience, with full residential emoluments. Applications should be sent to the undersigned at once.—G. Hurford, Secretary, Birmingham United Hospital, The Queen Elizabeth Hospital, Birmingham, 15.

BIRMINGHAM AND MIDLAND EAR AND THROAT HOSPITAL, Edmond Street, Birmingham, 3 (105 beds).—Applications are invited for the appointment of a HOUSE SURGEON (A). Practitioners within three months of qualification who are liable to service under the National Service Acts may apply. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Duties to commence immediately. Salary at the rate of £250 per annum, with full residential emoluments. Applications should be forwarded to the undersigned immediately.—W. H. Lomas, House Governor

---

BOLTON ROYAL INFIRMARY (270 beds—Resident Medical Staff, 6).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant October 21, 1945, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months Salary £175 per annum, with full residential emoluments. Applications to be forwarded to the undersigned.—Joseph Griffith, Superintendent-Secretary.

CHILDREN'S HOSPITAL (King Edward VII Memorial), Birmingham, 16. RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), to commence duties not later than December 1, 1945. R and W practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Applicants should have held house appointments and had surgical experience. Preference will be given to candidates holding the diploma of F.R.C.S. The salary will be at the rate of £350 per annum, with the usual residential emoluments. Applications should be sent to the undersigned by October 27, 1945.—Arnold Tunstall, House Governor.

CHELMSFORD AND ESSEX HOSPITAL, London Road, Chelmsford, Essex (180 beds).—Applications are invited for the post of HOUSE PHYSICIAN (A), male or female, to commence immediately. Salary £175 per annum, plus board, lodging and laundry. Practitioners within three months of qualification who are liable to service under the National Service Acts may apply when appointment will be for a period of six months Apply to the undersigned.—R. G. Morrish, House Governor and Secretary.

APPOINTMENTS

(Continued from page 13)

THE ROYAL MASONIC HOSPITAL, Ravenscourt Park, London, W.6. Physio-Therapeutical Dept.—As already advertised there is a vacancy at the end of the year for a PHYSICIAN-IN-CHARGE of the Physio-Therapeutical Department at the hospital. This department is exceedingly well equipped and the present holder of the office is retiring under the official age limit. Candidates should be well established in their profession. Applications should be made informally, in the first instance, without detailed copies of either testimonials or applications. They may be sent in the form of a cablegram should the candidate be at present serving overseas. If a successful candidate was serving actively in one of His Majesty's Forces or was a prisoner of war not yet repatriated the Board of Management would be willing to arrange for him to take up his appointment at the Royal Masonic Hospital when he was released from the Services. The retiring age for the post is 60. The number or beds in the hospital is 200 to 220, of which for the time being a considerable proportion is given over to Service cases. Application should be made to the Joint Honorary Secretaries at the hospital.

ROYAL WEST SUSSEX HOSPITAL, Chichester (274 beds—160 E.M.S.).—Applications are invited for the post of RESIDENT SURGICAL OFFICER (B1), vacant in October. Salary £450 p.a., with full residential emoluments. Suitably qualified R practitioners holding B2 appointments may apply. The appointment is limited to six months. Applications should be addressed to K. H. Williams, Secretary.

ROYAL NORTHERN INFIRMARY, INVERNESS. Pathology Department.—Applications are invited for the post of BIOCHEMIST. Applicants should hold a science degree (biochemistry), and should preferably have had a few years' experience in a hospital or university biochemistry department. Salary £550 p.a., rising by annual increments of £25 to £650. Applications should be lodged with the Medical Superintendent immediately.

ROYAL HALIFAX INFIRMARY (283 beds). Resident staff 5.—Applications are invited from registered medical practitioners (male) for six months for the following post—HOUSE PHYSICIAN (A) commencing immediately. Salary £175 per annum with full residential emoluments. Practitioners within three months of qualification who are liable to service under the National Service Acts, may apply. Applications should be sent to the undersigned immediately.—A. Midgley, Secretary.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd., The Gainsborough Press, St. Albans. Printed in Great Britain. Entered as Second Class at New York, U.S.A., Post Office.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 6 1945

HEARD AT HEADQUARTERS

Widening Contacts

For many years past there has been an agreement, honoured in letter and spirit, between the B.M.A. and the Society of Medical Officers of Health whereby they consult together and take agreed action on such matters as public health medical officers' salaries. A similar arrangement has lately been made with the Medical Superintendents' Society, a body with which the Association has had excellent relations for many years past. A representative of that Society will sit on the Hospitals Committee, and the chairman of the Hospitals Committee, Mr. R. L. Newell (who was re-elected to the chair at the last meeting of the committee), will sit on the main committee of the Medical Superintendents' Society. A memorandum by the Society on hospital policy and planning in the light of the White Paper proposals has been considered and, as a first step, transmitted to the committee, presided over by Lord Moran, which is dealing with consultant and specialist services, and on which the Royal Colleges and the B.M.A. are represented. Another body recently formed is the Association of Municipal Specialists, meaning the specialists, principally engaged in clinical work, who are employed whole-time by local authorities. A similar arrangement with this body is being worked out.

Reappearance

One of the signs of return to normal at Headquarters is the reappearance of the portraits in the large committee room at B.M.A. House. After five years of bare walls the room looks gay with these large portraits in their ornate frames. Behind the chairman's seat is the portrait of the founder of the Association, seeming to look down with some wonder at the vast organization which has developed from his early and local labours. Facing the present secretaries and clerks of the committees are two former secretaries, Dr. Alfred Cox and the late Dr. George Anderson. Does one detect in their eyes at times a gleam of criticism of their successors, or is it, maybe, a flash of sympathy at the interminable length and complexity of committee proceedings? On the north wall hang the portraits of two ladies, Elizabeth Garrett Anderson and Christine Murrell, the one the first woman member of the Association and the other the first woman member of the Council; while opposite is the benevolent countenance of Lister. It is pleasant to have them back again; they are old friends, with the exception of Dr. Anderson's portrait, which has not previously been hung in the committee room where he toiled for so long.

For the Impatient

Many people are asking when the talks on the National Health Service will be resumed or re-begun. Clearly the new Minister is closely occupied with housing at the moment. It seems a pity that the two biggest social problems of the time, the new health service and the housing situation—which, of course, have much in common, but are not necessarily administratively linked—should be in the hands of one and the same Minister, however go-ahead and capable.

A good many are waiting for a lead on the arrangements for the medical treatment of children under the new Education Act. The new committee which the Council appointed at its last meeting has had one meeting, and a second is being held this week. The committee may very likely decide to go to the Ministry of Education and ask for a national agreement—that is to say, an agreement which the Minister can lay upon local authorities. Should it fail in this object the committee will no doubt report back to the Council its views for promulgation to the Divisions. The urgency of the matter is realized and there has been no undue delay.

Payment of Medical Staff

The question of payment of voluntary hospital staffs for the treatment of persons who are the financial responsibility of the Ministry of Pensions has again come forward. There is a strong feeling that no hospital should contract with the Ministry for treatment of its patients without provision being made for the payment of medical fees. It is obviously inequitable that full maintenance charges should be paid to the hospital and nothing at all be paid to the medical staffs for the work they do. The suggestion is made that 25% should be added to maintenance payments, this additional sum to be distributed among the visiting staff. The maximum paid to general hospitals, other than teaching hospitals, for the maintenance of in-patients of the "other rank" class is 18s. for each patient-day; 25% of this would be 4s. 6d. a day or one and a half guineas a week. The feeling of the Hospitals Committee at its recent meeting was that this would be a fair basis to take as applicable to all hospitals. A subcommittee has been appointed to go into the question with the Ministry.

Retiring Age

At the beginning of the war the B.M.A. circularized hospital authorities on the question of new appointments during the war. One recommendation concerned hospital appointments held by men who were near the retiring age and who went away on war service. It was suggested that in such cases the appointment should be continued after the age limit had been reached, the period of war service being added to the age limit. One question received concerns a supposed member of the staff due to retire at 60 who, at 59, volunteers for service and is away for three years: Is he on his return to continue on the staff for three years or for the one year which he has missed? The example is an exceptional one, for there cannot be many members of hospital staffs, sexagenarians, who have been away for three years, but the matter is difficult if the blocking of younger men for promotion is to be avoided.

One scheme at a London hospital provides that while the member of the staff automatically retires at 60, he may continue until 63 in a kind of emeritus capacity, having a small number of beds and being called upon for a certain amount of teaching, but not in charge of a team and not a member of any staff committee. This enables a man who is still vigorous to continue his service, to some extent compensates him for the time he has spent abroad, does not interfere with the efficiency of the hospital, and does not block promotion. A letter is to be sent to hospitals making suggestions along these lines, but, of course, each hospital will have its own peculiar cases, and in some the seniors will have to continue for a time because of the lack of people available for the new appointments.

DOCTORS' CARS

It has been announced from time to time that the Ministry of War Transport was prepared to give high priority to doctors who were in need of new cars or had to replace those that had become unreliable and unserviceable. Results have not come up to expectation; in fact they are most disappointing, although the B.M.A. has continued to stress the urgency of the situation. It is hoped that the following brief statement of the present position will remove misunderstanding, though it will not satisfy applicants for new cars or for reconditioned Service vehicles who have been put to inconvenience by failure or exasperated by delay.

Reconditioned Service Cars

In spite of statements to the contrary, the majority of cars in Service dumps have already been denuded of usable parts and are unserviceable, whereas of those actually available only about one-third are suitable for reconditioning. Before any new cars were available a large proportion of the ex-Service cars released to the Ministry of War Transport were allotted to doctors. The numbers were small and it was never anticipated that they would meet the demand. When a supply of new cars could be confidently expected the Minister decided that the few Service cars should be reserved for nurses and midwives in rural areas and certain categories of disabled ex-Service men. Figures have already been published to explain the discrimination. In three months over 20,000 written applications were received for 170 reconditioned cars. It appears that for the time being the supply is likely to remain very small indeed, and that it is unlikely any of these cars will be available for doctors.

New Cars

We are informed by the department that licences to purchase were issued for the number of cars expected to be available according to makers' estimates. Of these licences roughly one-half have been issued to doctors. Unfortunately the number of new cars delivered up to the end of August was actually about one-tenth of that anticipated. It is hoped that this disappointing situation, stated to be due to unforeseen difficulties in production, will soon improve.

In the meantime, licences may have to be withheld until there is a reasonable prospect of delivery. We are assured that cases of urgent need will continue to receive special consideration, and that priority will be determined as fairly as possible, not only in relation to all applications received but as between those in special categories, such as doctors, whose claims have already been conceded.

Repairs and Spare Parts

The position concerning repairs and spare parts continues to be very difficult, and the return of the basic petrol ration has increased the demand on local firms, while their labour difficulties have not yet been overcome. Application for special priority should be made to the Regional Maintenance and Certifying Officer, and not to the Ministry of War Transport in London. The addresses of Regional Offices are as follows:

Northern: 41–45, Grey Street, Newcastle-upon-Tyne, 1.
North-Eastern: 44, The Headrow, Leeds, 1.
North Midland: Grosvenor House, Friar Lane, Nottingham.
Eastern: Sussex House, Robson Street, Cambridge.
Metropolitan: Romney House, Tufton Street, London, S.W.1.
Southern: Chiltern Court, St. Peter's Avenue, Caversham, Reading.
South-Western: Beacon House, Queen's Road, Bristol, 8.
Wales: Graham Buildings, Newport Road, Cardiff.
Midland: York House, Great Charles Street, Birmingham.
North-Western: Arkwright House, Parsonage Gardens, Manchester, 3.
South-Eastern: Mount Ephraim House, Mount Ephraim, Tunbridge Wells.

Tyres

The supply of tyres is under the control of the Ministry of Supply and not the Ministry of War Transport. As during the war, special consideration is being given to doctors' needs. To obtain a permit, Form T.F.A.1 should be obtained from a post office and forwarded to the Divisional Petroleum Officer. He will return Form T.F.A.2, which should be presented to an authorized tyre dealer. If reasonably prompt delivery cannot be assured application should be made direct to the Regional Tyre Officer, whose address may be obtained from the authorized tyre dealer.

Income-tax Allowances

A note on income-tax allowances and car replacement will be found in the *Journal* this week on page 484.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. Leonard F. Browne, at 9, Harley Street, W.1; Mr. W. Barclay, F.R.C.S.Ed., at 5, Murray Road, Huddersfield.

A HOME NURSING SERVICE

In these days of shortage—one might almost say total absence—of domestic help and, as one correspondent put it, of "non-queueing neighbours," a scheme which provides home nursing for a small cost deserves the widest publicity. The Home Nursing Scheme (Greater London Provident Scheme for District Nursing) is a plan, already operating, to supply a nurse in the homes of persons contributing to a Home Nursing Group at their place of employment. For a penny a week a man or woman earning not more than £420 a year can depend on the services of a nurse from a District Nursing Association in almost any illness, the exceptions being midwifery, attendance at operations, night nursing, massage, electrical treatment, and the nursing of certain infectious diseases. The contribution covers the worker and the members of his family whom he supports, and it is deducted from his pay. The scheme operates simply: the member calls in a nurse and applies to the Group Secretary at his place of employment for a nursing voucher, which the nurse will accept instead of a fee. Groups are supplied with nurses' telephone numbers arranged in alphabetical order of the area in which they live, the list we have before us covering London, Greater London, and places as far apart as Leatherhead and Reigate, and Pinner. It is pointed out that the Home Nursing Scheme is not a rival of the hospital provident schemes, which make no contribution to the District Nursing Associations. Its objects are to provide home nursing benefits to members and their dependants wherever they live at a standard rate, and to help the funds of the District Nursing Associations. The address of the Home Nursing Scheme is 19, the Broadway, Hammersmith, London, W.6.

Correspondence

Demobilization and Repatriation

SIR,—We offer no apologies for swelling the numbers of protesting letters that have appeared in your columns on this subject. We note with growing concern, annoyance, and extreme misgivings the following facts:

(1) Addressing the 164th session of the G.M.C. on May 29, the President stated, "... The total number [of registered practitioners] includes 3,169 registered temporarily as foreign practitioners. . . ."

(2) There are no fewer than 529 *more* names on the Foreign section of the *Medical Register* for 1945. Yet British Service M.O.s continue to serve on the Continent (cleaning up places like Belsen for the Germans) while Continental doctors flourish, multiply, and take root in Britain.

(3) Up to May 24 there were 17,169 Service M.O.s (27% of the total of registered practitioners). It should not be difficult to replace at least a high percentage of these by some of the remaining 73%, and release M.O.s in the B.L.A. (in particular) by using most, if not all, of the 3,169 foreign practitioners.

(4) A careful "Gallup poll" of all types of M.O.s in India Command and S.E.A.C. has revealed that none of them has done, on an average, more than 3 months real, hard, *professional* work in each of their years of oversea service. It is, therefore, useless to talk of the "requirements" of the Services in medical man-power, while that same man-power is being so shockingly wasted and misused. "Unforeseen demands" (that hoary old refuge of those concerned in keeping up establishments to maintain their own *raison d'être*) can no longer be quoted as an excuse for this monstrous "reserve" of unemployed doctors.

We feel it is long overdue, and now absolutely imperative and unescapable, that a ruthless cutting-down of establishments at all levels should be carried out forthwith to "liberate" the 75% unemployed doctors in the Far East. This measure, together with the immediate return and cessation of any further registration of foreign practitioners, will go a very long way indeed towards relieving a pressure of feeling among doctors in the Far East which is reaching dangerously restive proportions. For obvious reasons we desire to remain anonymous.—We are, etc.,

"FOUR SERVICE M.O.S. S.E.A.C."

Release of R.N.V.R. Medical Officers

SIR,—You published in the *Journal* of Sept. 8 (p. 335) a statement that Army Group 23 medical officers will be demobilized in their corresponding groups by Jan. 20. It is perfectly obvious by the letters you publish that the Medical Department of the Navy has no similar organization to offer, and as a result this plan is working out unfairly to us of the R.N.V.R. Surely it is the duty of the C.M.W.C. to allot new entries to the Services proportionately so that we may all be kept in step?

Further, it would appear that an abuse had occurred in the Class A demobilization scheme in that over-age medical officers such as surgeon captains R.N. are going out under Class A. Surely this scheme was arranged for the speedy release of those who, having earned their release by age and service, could go back to medical practice to relieve the civilian pressure, rather than to permit those who chose the R.N. many years ago now to retire on their pensions. For every pensioned-off R.N. medical officer demobilized under Class A, we younger R.N.V.R. medical officers have to wait that much longer for our chance again to become useful doctors to the public. It is considered that that is wrong and the scheme was never intended to operate that way.

Thirdly, those who have had occasion to correspond with the C.M.W.C. will realize the chaos that must be going on there, and I heartily agree with "Major R.A.M.C." (*Supplement*, Sept. 15, p. 66) that this committee, to whom is entrusted the allocation of medical man-power, be called upon to resign, and to do it with no waste of time.—I am, etc.,

"GROUP 16."

⁂ The Secretary of the Central Medical War Committee writes: The Central Medical War Committee allocates new entrants to the Services proportionately in accordance with the decisions of the Minister of Health on the advice of the Medical Personnel (Priority) Committee. Naval medical officers in Groups 1 to 7 who have not volunteered for further service will either be released or on their way home for release by the end of October, and a start will be made on Groups 8 to 15. The Admiralty is awaiting information as to the number of medical officers who wish to remain in the Service before making a further announcement; the aim is to release all groups up to 15 by the end of the year.

Short-service Commissions and Release

Sir,—Can you help by publishing what many of us consider a gross injustice? Many doctors took short-service commissions (5 years) prior to the war and our contract is now finished, and yet we find that we are being held on the reserve until general demobilization and that we cannot be released in our age-and-service group. This seems very unfair when other doctors who joined after us are being released. Why can't we be treated the same as any other doctor and be included in the age-and-service groups?

I think, too, that the word "demobilized," which is so loosely used, should be dropped; there is *no* demobilization yet, only "releases."—I am, etc.,

"Medico, R.A.M.C."

Another Side to the Question

Sir,—I am as anxious as any other medical officer to leave the Service as soon as possible, and on this account I am sorry to see some of the published opinions, most, but not all, of which are in letters, on the various factors which retard release. In addition I am particularly sorry to see misleading statements, which I feel can only confuse the issues, embarrass the medical authorities, and raise false hopes.

Release of all personnel, including doctors, is ultimately the responsibility of the Government; the Central Medical War Committee and the various Service authorities can only advise and state their respective needs. Civilians, and civilians to be, must therefore urge the Central Medical War Committee to speak as forcibly to the Government as it can; the Government must take ultimate executive responsibility for the size of all branches of the Services.

On the other hand, I recognize the needs of the R.A.F. Medical Service, of which I am a temporary member, and I do not believe that there has been any attempt by senior medical officers to maintain establishment for the sake of prestige or personal gain, as has been suggested more than once. The reduction in the size of the R.A.F.M.S. is being carried out, so far as one can see, in step with the reduction in size of the R.A.F. as a whole, and unless the size of all other branches of the R.A.F. is more quickly reduced, then no hope of quicker demobilization of medical officers can reasonably be entertained. Naturally, comparisons between the numbers released among the branches in the various age groups are misleading, as the relative numbers which together make up age groups differ, as do the needs for particular types of personnel. Any such release of medical officers which lowered the ratio of medical officers per 1,000 personnel of all kinds would create difficulties for the medical officers who remained. Release examinations are vital, and protect the outgoing individual just as much as the State.

Serving medical officers who complain of insufficient work have a means of redress; they can write to their senior medical officer, stating quite clearly that they have too little to do, giving evidence in each particular case. From my own knowledge these statements are carefully examined; commitments would be reviewed, and if complaints of too little work were in fact substantiated an overall increase in the speed of release would be possible.

In conclusion, as the obvious cannot be stated too often, it must be repeated that ultimate responsibility for the speed and extent of demobilization rests upon the Government.—I am, etc.,

"Wing Cmdr., R.A.F.V.R."

The Silent Service

Sir,—I have just received the *Journal* of Sept. 8. In the Services section you publish two announcements—one from the War Office and the other from the Royal Air Force regarding the release dates of medical officers in those two Services. Naturally I ask myself, and I am sure the majority of my colleagues in the Navy are asking the same question: Why has not the Admiralty made a similar announcement in conjunction with its two brother Services? I suspect the answer is that the Navy is the "Silent Service," but this is a poor excuse just now when more and more secrets are being disclosed every day by the security authorities of all three Services.—I am, etc.,

"Anxiety State."

The Medical Situation in India

Sir,—Lieut.-Col. Lodge Patch (*Supplement*, Aug. 18, p. 47) has drawn a very unfair and altogether wrong picture of Indian medicine. It seems to me that he has very little experience of the medical situation in India except what he knows of the Punjab Mental Hospital. His praise of that notorious book *Verdict on India* confirms that opinion. I shall just take some more important points for discussion.

1. It is not true that the standard of medical education in India is very low in every medical college. Bombay College, for example, can compete with the best in this country. The chief difficulty is finance. Existing colleges are poor in resources. Lack of funds at the disposal of the Provincial Ministers does not allow extension of these facilities.

2. His remarks about indigenous medical systems—Ayurveda and Unani—show his ignorance of these systems. If carefully studied and practised, they can do a lot of good. Many drugs used in these systems have been tried at the Calcutta School of Tropical Medicine and incorporated in the Western materia medica. Because of lack of Government control of these systems anyone can practise as a *vaid* or a *hakim*. These people flourish, not because Indian politicians and people do not want Western medicine but because, first, Western medicine is too costly for an average Indian, and, secondly, it is not available to millions of people living in villages and small towns. If free dispensaries are opened in every village I am quite sure the unauthorized practitioners will soon disappear. Of course some illiterate or even educated people may still patronize them. But that is done even in this civilized country; millions of pounds' worth of useless patent medicines are bought by the British people every year; thousands of people still go to the herbalist, old-type oculist, and the charm-man, in spite of the fact that most people can easily obtain free and efficient medical treatment from a doctor, a clinic, or a hospital. If an Englishman can do it, why blame the poor illiterate Indian villager?

3. Lieut.-Col. Patch describes a madhouse of 1922 in Lahore and compares it with a modern mental hospital in this country. He does not know, or has forgotten, the condition of "poor-houses" or "workhouses" in this country. Even now I cannot persuade many of my patients here to go to an infirmary.

4. Everyone knows what India's needs are so far as health is concerned. We need more and better-equipped medical colleges, hospitals, doctors, nurses, pharmaceutical companies, and free and universal national health services. But how are all these things to be done? They need careful planning, co-operation between all sections of the community, and plenty of money. Lieut.-Col. Patch—like most of the British observers—places the whole blame on Indian Ministers and absolves the British Viceroys and Governors of all responsibility on the grounds that they cannot go against the Indian Ministers. This is sheer nonsense. Finance is still in the hands of the Viceroy, and only a tiny fraction of the revenue is allocated to medical and health services. Much of this goes in the pockets of highly paid I.M.S. officers and others. Indian Legislatures and Ministers cannot say a word about finance. It is not the Ministers who have the power of veto over the Governors; it is the reverse. Governors have dismissed their Ministers many times during the last few years for political reasons.—I am, etc.,

Birmingham. D. R. Prem.

Tyre Replacements

Sir,—The holders of "E" coupons have still to go through the farcical procedure of filling up a form to obtain another form in order to obtain a tyre. As all "E" users are clearly entitled to tyres, why not permit them to place the order at once on presentation of a current petrol coupon? The above procedure took only 3 to 4 days during the war. Now it takes two weeks precisely from the sending of the first form to reception of the permissive document. This is only the start of the trouble. During the war we could, with such a permit, acquire a tyre at once, or at the most within a week. Now the shortage is so serious that it may be necessary to wait for 2 to 3 months. What is the explanation of this? Is it that all new tyres are now being allotted to car manufacturers, with complete disregard for the "essential consumers"? A doctor who has but one car and one spare wheel is thus rationed to one serious puncture every three months. If he has more he must cease practice. No amount of battering at the gates of bureaucracy (a term rapidly becoming synonymous with democracy) will bring him relief. Is the B.M.A. really incapable of tackling this monstrosity of inept administration?—I am, etc.,

London, W.1. A. H. Douthwaite.

⁂ The Secretary of the B.M.A. states: Although we are not responsible for the Ministry of Supply's arrangements it is only fair to state that one of the forms is an application, obtainable at any post office, and the other is a permit to purchase. We are informed by the Ministry that there is no reason why doctors should have to wait for two or three months before obtaining tyres. The same priority is afforded as hitherto, and in cases of delay direct application should be made to the Regional Tyre Officer, whose address may be obtained from an authorized tyre dealer. A note on the present position appears in this *Supplement* on page 78.

Support for B.M.A. Policy

SIR,—The North-East Essex Division are calling an open meeting to consider the following resolution:

"That this meeting is solidly behind the Negotiating Committee of the British Medical Association appointed to consult with the Government on the proposed National Health Service, and asks them to stand firm on the principles approved by the A.R.M. of 1944 and the Special R.M. of 1945."

I have been asked by the committee to forward this to you for publication in the hope that other Divisions may affirm similar resolutions and demonstrate the profession's support of the B.M.A.—I am, etc.,

WALTER RADCLIFFE,
Hon. Sec., North-East Essex Division.
Colchester.

National Health Service

SIR,—Surely we are looking at this question of a National Health Service from the wrong angle. We should not have been in the position of having to oppose the Government. We have asked humbly for changes for many years. Now, with a change of Government, is our opportunity. We should formulate our scheme, make our demands, publicize them, and put the Government in the position that they must either accede to the demands of the doctors or resist them.—I am, etc.,

Crowthorne. H. D. FORBES FRASER.

In Dr. Watson's Day

SIR,—In reading recently a life of Conan Doyle I came across the following passage: "The few patients were so poor that they could seldom afford more than eighteen pence." That was in 1882. In 1937–8 I kept a record for a year and found that I received an average of twenty-three pence for every N.H.I. person seen. The "being seen" might mean a certificate only, a consultation, or a visit, night or day, an operation, or an accident, in the last case not forgetting the mess to be cleared up afterwards. With the increased sickness rate of to-day the average is certainly back to Dr. Doyle's "eighteen pence."

And yet there are "simple Simons" among us who believe that, when the medical profession is in abject subservience to the State, the State will be less parsimonious than in the past. That the Labour Party has always acted on the peculiar principle that the worker is deserving of only the cheapest doctor should make both worker and doctor view future plans with suspicion.—I am, etc.,

Chingford, E.4. R. A. MURPHY.

The R.A.F. has announced that medical officers in age-and-service groups 15 to 20 inclusive will be released in November and December.

The Medical Department of the Navy has stated that Naval medical officers in Groups 1 to 7 who have not volunteered for further service will either be released or be on their way home for release by the end of October, and a start will be made on Groups 8 to 15. The Admiralty is awaiting information as to the number of medical officers who wish to remain in the Service before making a further announcement; the aim is to release all groups up to 15 by the end of the year.

H.M. Forces Appointments

ARMY

Col. E. A. P. Brock, late R.A.M.C., having completed four years in the rank, is retained on the Active List supernumerary.

Lieut.-Col. K. P. Mackenzie, from R.A.M.C., to be Col.

ROYAL ARMY MEDICAL CORPS

Lieut.-Col. W. H. A. D. Sutton, O.B.E., having attained the age for retirement, is retained on the Active List supernumerary.

Major (War Subs. Lieut.-Col.) W. G. S. Foster to be Lieut.-Col.

Major A. McMillan to be Lieut.-Col.

Major E. S. Tweedy has retired on account of disability, and has been granted the honorary rank of Lieut.-Col.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Majors G. M. Frizell, T.D., W. M. Arnott, T.D., and D. H. Young to be Majors.

War Subs. Capt. J. Rowatt has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

War Subs. Capts. K. W. N. Palmer, A. B. Dick, and J. W. E. Fellows to be Capts.

ROYAL AIR FORCE

ROYAL AIR FORCE VOLUNTEER RESERVE

Fl./Lieut. W. Begg has relinquished his commission on account of medical unfitness for Air Force service, retaining his rank.

Ft. Lieut. A. M. Foxe has resigned his commission, retaining his rank.

AUXILIARY AIR FORCE RESERVE OF OFFICERS

Ft. Lieut. (Temp. Squad. Ldr.) H. W. Walter has relinquished his commission on account of medical unfitness for Air Force service, retaining the rank of Squad. Ldr.

INDIAN MEDICAL SERVICE

Lieut.-Cols. P. H. S. Smith, O.B.E., and T. R. Khanna to be Cols.

EMERGENCY COMMISSION

W. Hayes to be Capt.

ARMY IN BURMA RESERVE OF OFFICERS

EMERGENCY COMMISSIONS

To be Lieuts.: E. Maung, A. Shaung, and T. Shwe.

COLONIAL MEDICAL SERVICE

The following appointments are announced: Mrs. Ethel E. A. D. Knowles, M.R.C.S., L.R.C.P., District Medical Officer, Bahamas; Miss Margaret D. Miller, M.B., Ch.B., Medical Officer, Tanganyika; H. A. Munro, L.R.C.P., L.R.C.S., Medical Officer, St. Vincent.

B.M.A. LIBRARY

The following books were added to the library during May and June, 1945:

Armstrong, J. R.: Bone-Grafting in Treatment of Fractures. 1945.
Bellows, J. G.: Cataract and Anomalies of the Lens. 1944.
Black's Medical Dictionary. By J. D. Comrie. Eighteenth edition. 1944.
Burton, E. F., and Kohl, W. H.: The Electron Microscope. 1942.
Comroe, B. I.: Arthritis and Allied Conditions. Third edition. 1944.
Dattner, B.: The Management of Neurosyphilis. 1944.
Eder, David: Memoirs of a Modern Pioneer. Edit. by J. B. Hobman. 1945.
Ewing, I. R.: Lipreading and Hearing Aids. 1944.
Forbus, W. D.: Reaction to Injury. 1943.
Hamilton, W. J., *et al.*: Human Embryology. 1945.
Health and Social Welfare, 1944-1945 (Advisory Editor: Lord Horder). 1945.
Howell, T. H.: Old Age: Some Practical Points in Geriatrics. 1944.
Illingworth, C. F. W., and Dick, B. M.: Textbook of Surgical Pathology. Fifth edition. 1945.
Keers, R. Y., and Rigden, B. G.: Pulmonary Tuberculosis. 1945.
Kersley, G. D.: Outlines of Physical Methods in Medicine. 1945.
Maxwell, I.: Clinical Biochemistry. Fifth edition. 1944.
Mills, C. A.: Climate Makes the Man. 1944.
Mulinos, M. G.: Pharmacology. 1944.
Paterson, D.: Sick Children. Fifth edition. 1944.
Pedersen, K. O.: Ultracentrifugal Studies on Serum and Serum Fractions. 1945.
Rowbotham, G. F.: Acute Injuries of the Head. 1945.
Smout, C. F. V., and McDowall, R. J. S.: Anatomy and Physiology for Students of Physiotherapy. 1944.
Stitt's Diagnosis, Prevention and Treatment of Tropical Diseases. Seventh edition. 2 volumnes. 1944.
Stokes, J. H., *et al.*: Modern Clinical Syphilology. Third edition. 1944.
Take Care of Your Feet. 1944.
Taylor, S.: Battle for Health. 1944.
Tidy, Sir Henry L.: A Synopsis of Medicine. Eighth edition. 1945.
Wolf, S., and Wolff, H. G.: Human Gastric Function. 1944.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Revision course in anaesthetics, Oct. 8 to 20, demonstrations and/or lectures daily at various London hospitals; (2) Week-end course in rheumatic diseases, all-day, Sat. and Sun., Oct. 20 and 21, at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, S.W.; (3) Week-end course in diseases of the ear, nose, and throat, Sat. and Sun., Nov. 10 and 11, at Metropolitan Ear, Nose, and Throat Hospital; (4) Primary F.R.C.S. course, Nov. 1945 to Jan. 1946, three evenings weekly, 6 p.m. to 8.15 p.m.; (5) Week-end course in rheumatic diseases at Royal Bath Hospital, Harrogate, all-day, Sat. and Sun., Nov. 3 and 4. Full particulars of courses from the Fellowship of Medicine, 1, Wimpole Street, W.

WEEKLY POSTGRADUATE DIARY

GLASGOW UNIVERSITY: DEPARTMENT OF OPHTHALMOLOGY.—*Wed.*, 8 p.m., Prof. A. J. Ballantyne: III. Tumours and Pseudo-tumours.

DIARY OF SOCIETIES AND LECTURES

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—*Mon.*, *Wed.*, and *Fri.*, 2.30 p.m., Prof. John Beattie, Kidney Function. *Mon.*, 3.45 p.m., Prof. R. A. Willis, Routes of Metastasis of Tumours; 5 p.m., Prof. A. J. E. Cave, Anatomy of the Mammary Gland. *Wed.*, 3.45 p.m., Prof. Willis, Metastatic Tumours in the Lungs, Liver, etc. *Wed.* and *Fri.*, 5 p.m., Prof. Cave, Constitution of the Abdominal Walls. *Thurs.*, 5 p.m., Lister Memorial Lecture by Sir Howard Florey: The Use of Micro-organisms for Therapeutic Purposes. *Fri.*, 3.45 p.m., Prof. Willis, Metastatic Tumours in Bones.

ROYAL SOCIETY OF MEDICINE.—*Tues.*, 5 p.m., Section of Experimental Medicine and Therapeutics; 5.30 p.m., Section of Psychiatry. *Wed.*, 2.15 p.m., Section of Comparative Medicine; 4.30 p.m., Section of Physical Medicine. *Thurs.*, 5 p.m., Section of Ophthalmology. *Fri.*, 5 p.m., Clinical Section.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.—*Mon.*, 8 p.m., General meeting. 8.30 p.m., Presidential Address by Sir James Walton: The Aetiology of Gall-stones.

ROYAL MEDICAL SOCIETY, 7, Melbourne Place, Edinburgh.—*Fri.*, 8 p.m., Dr. Charles Hill (Secretary, B.M.A.): The Future of Medical Practice.

ROYAL SANITARY INSTITUTE.—At Rehabilitation Hall, Hospital Annexe, Hope Hospital, Eccles, Old Road, Salford, *Sat.* (Oct 13), 10 a.m., Salford Sessional Meeting. Dr. J. L. Burn: New Remedies in Disinfestation. Mr. J. E. Blease: The Unfit House.

B.M.A.: Branch and Division Meetings to be Held

CITY OF EDINBURGH DIVISION.—At B.M.A. Scottish House, 7, Drumsheugh Gardens, Edinburgh, Tuesday, Oct. 9, 8 p.m. Film: Sex Hormones: Physiology, Diagnosis, and Treatment. Dr. W. G. Clark: Edinburgh Scheme under the Maternity Services (Scotland) Act, 1937.

ISLE OF WIGHT DIVISION.—At St. Thomas's Church, Newport, Sat., Oct. 6, 3.15 p.m. Mr. E. Mowat: Divine Healing. All medical practitioners and ministers of religion in the area of the Division are invited.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

LAMBERT.—On Sept 23, 1945, at Hillingdon County Hospital, to Sadie (*née* Woolf), wife of Dr. E. Vivian Lambert, of Sussex Lodge, Uxbridge, a daughter.

PAYNE.—On Sept. 22, 1945, at Dunstall House Nursing Home, Belsize Park, to Thelma Dorothy, wife of R. F. Payne, B.A., M.R.C.S., L.R.C.P., a son.

MARRIAGE

OWEN—NEILD.—On Sept. 29, 1945, at Wetherby, Capt. Llewelyn P. Owen, R.A.M.C., to Barbara H. Neild.

DEATH

HAMILTON.—On Sept. 24, 1945, Alexander Keith Hamilton, M.B., formerly of The Great House, Tiverton, Devon.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

COUNTY BOROUGH OF IPSWICH. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from registered medical practitioners for the above appointment. The possession of the Diploma in Public Health or an equivalent qualification will be an advantage. The salary scale is £600 p.a. rising by annual increments of £25 to £700, plus war bonus, and the successful candidate will devote the whole of his or her time to the duties of the office, under the direction of the Medical Officer of Health. The approval of the Minister of Health has been obtained for the appointment, and candidates should submit with their applications full information as to their liability for military service, medical fitness, and position as regards deferment. Applications, endorsed "Assistant Medical Officer of Health," should be forwarded to the Medical Officer of Health, Elm Street, Ipswich, at once.—A. Moffat, Town Clerk, Town Hall, Ipswich.

COUNTY BOROUGH OF BURNLEY. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from medical practitioners, either sex, for the above temporary position. Persons already in whole-time public health employment by local authorities will not be eligible to apply. The duties will be mainly in connexion with the School Medical Service but will include maternity and infectious diseases. Salary £500 per annum rising by £25 per annum to a maximum of £700 per annum plus bonus of at present £59 16s. Conditions of appointment and forms of application may be obtained from the Medical Officer of Health, St. James's Street, Burnley. to whom applications must be returned as soon as possible.—Archibald Glen, Town Clerk, Town Hall, Burnley.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE. County and Emergency Hospital, Otley (296 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of a RESIDENT MEDICAL OFFICER (B2), vacant now, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be for a period not exceeding one year. The salary is at the rate of £200 per annum, with full residential emoluments. Applications should be submitted to the Deputy Medical Officer, County Hall, Wakefield.—Bernard Kenyon, Clerk of the County Council, County Hall, Wakefield.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D. Storey, Town Clerk, City Hall, Norwich.

CITY OF STOKE-ON-TRENT. City General Hospital. Appointment of SENIOR ASSISTANT RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of Senior Assistant Resident Medical Officer (B1) at the City General Hospital, Stoke-on-Trent (1,200 beds). Applicants should have held house appointments and had surgical experience. Suitably qualified R practitioners, holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary £350 per annum rising by annual increments of £25 per annum to £450 per annum, plus bonus and residential emoluments. Local Government Superannuation Act, 1937, applies. Appointment subject to one month's notice on either side. All fees receivable to be paid to the Corporation. Applications endorsed "Senior Assistant Resident Medical Officer, City General Hospital," to be sent to the undersigned as soon as possible.—Harry Taylor, Town Clerk.

CITY OF LEEDS. Public Health Department. St. Mary's Infirmary. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male, for the post of Resident Medical Officer (B2) for the above hospital, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. Preference will be given to candidates who have held an A post in a maternity hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The Hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part I Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid in to the City funds. Applications, endorsed "R.M.O.," to be forwarded to the undersigned.—J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

COUNTY COUNCIL OF MIDDLESEX, NAPSBURY AND SHENLEY MENTAL HOSPITALS. —Applications are invited from duly qualified medical practitioners for the established posts of RESIDENT MEDICAL SUPERINTENDENT at each of the above hospitals, the normal accommodation of each being between 1,700 and 2,000 beds. The commencing salary for each post will be £1,500 per annum, rising by annual increments of £50 to £1,750, and an unfurnished house will be provided rent free (general and water rates being paid by the Council), but there are no other emoluments. The appointments will be subject to the Standing Orders and Staff Regulations of the Council as in force from time to time and to the Asylum Officers' Superannuation Act, 1909. The persons appointed must devote their whole time to the service of the Council, and the duties of each post will include such functions relating to the County Mental Health Service, including responsibility for an Out-patient clinic at a county general hospital, as the Council may from time to time determine. All fees received must be paid over to the Council. Candidates must have previous experience in mental hospital work, and preference will be given to those holding the D.P.M. qualification. Candidates not already on the permanent staff of the Council should be under 46 years of age on April 1, 1946, and will be required to pass a medical examination. Applications, accompanied by copies of three testimonials, should reach the undersigned (envelope to be marked "Z") not later than January 14, 1946, and should indicate a date (not being earlier than April 1 or later than June 1, 1946) for commencing duties if appointed. Candidates serving over-seas may furnish the names of three referees in lieu of forwarding copy testimonials. An interview of selected applicants will take place about the middle of February, 1946, and candidates should indicate where a telegram or cable will reach them about three weeks beforehand. Candidates must be prepared to accept either position if offered. Canvassing will be a disqualification.—C W. Radcliffe, Clerk of the County Council, Guildhall, Westminster, London, S.W.1.

GLAMORGAN COUNTY COUNCIL. West Glamorgan County Hospital, Neath. TEMPORARY HOUSE SURGEON (A).—Applications are invited from registered medical practitioners (including practitioners within three months of qualification who are liable to serve under the National Service Acts) for the appointment of Temporary House Surgeon (A) at the West Glamorgan County Hospital, Neath. If held by a practitioner who is liable under these Acts, the appointment will be limited to six months, otherwise it will not exceed one year. Salary £200 per annum, plus cost of living bonus and residential emoluments. All fees whatsoever received by the successful applicant whilst holding the appointment must be handed over to the County Council. The appointment will be terminable by one month's notice on either side. Applications should be sent to the County Medical Officer, Glamorgan County Hall, Cardiff, within ten days of the publication of this advertisement. A. Clifford Walter, Deputy Clerk of the County Council, Glamorgan County Hall, Cardiff.

EAST RIDING COUNTY COUNCIL.—Driffield Emergency Hospital (324 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), vacant immediately. The Hospital provides experience in general surgery. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary from £350 to £550 per annum according to qualifications and experience, together with full residential emoluments.

Beverley Emergency Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2) (general duties), vacant November 1, 1945, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period not exceeding one year, subject to one month's notice on either side. The salary is at the rate of £200 per annum, with full residential emoluments.

Applications for each post to be made as soon as possible to the undersigned.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

MERIONETH COUNTY COUNCIL. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited for the above post from registered male or female medical practitioners. The appointment will be for a period of twelve months and will be determinable by one calendar month's notice on either side. The salary is at the rate of £500 per annum together with cost-of-living bonus and travelling and subsistence allowances according to the Council's scale. The successful applicant will be required to reside at Dolgelley and to carry out duties in connexion with Public Health and School Medical Service. The successful applicant will also be required to pass a medical examination by the County Medical Officer of Health. Further particulars may be obtained from the County Medical Officer of Health, County Offices, Dolgelley. Applications should reach the undersigned not later than Saturday, October 20, 1945.—Hugh J. Owen, Clerk of the County Council, County Offices, Dolgelley.

CHESHIRE COUNTY COUNCIL. Macclesfield West Park (County) General Hospital. RESIDENT ASSISTANT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners (male or female) including R and W practitioners who now hold A posts, for the above appointment at a salary of £300 per annum, together with the usual residential allowances. If held by an R practitioner, the appointment will be limited to six months, otherwise it may be renewed for a further period of six months. The duties will be mainly in the Maternity Department. Applications to be made on forms obtainable from the undersigned and returned not later than October 20, 1945.—Ian Mackay, County Medical Officer of Health, County Public Health Department; 24 Nicholas Street, Chester.

LONDON COUNTY COUNCIL.—Applications are invited for appointment to two positions of full-time JUNIOR ASSISTANT PHYSICIST (temporary wartime appointment) in the Council's hospitals service. The duties will be mainly in connection with *x*-ray and radium work at Hammersmith Hospital, Ducane Road, W.12, and Lambeth Hospital, Brook Drive, S.E.11, but the persons appointed will be required to undertake any other duties which may be allotted to them from time to time. Salary £350 a year rising by annual increments of £25 to £400 a year (together with cost-of-living addition, £60 a year for men or £48 a year for women) There are no emoluments. Application forms giving full particulars obtainable (stamped addressed foolscap envelope necessary) for Medical Officer of Health (S.D.6.), London County Council, County Hall, S.E.1, are returnable by October 19, 1945.

MIDDLESEX COUNTY COUNCIL. ASSISTANT MEDICAL OFFICER (res. or non-res. B1) required at CLARE HALL COUNTY HOSPITAL, South Mimms, Middlesex (540 beds for tuberculosis).—Applications invited from registered medical practitioners (including R and W practitioners holding B2 posts) who have held house appointments and had experience in diagnosis and treatment of pulmonary tuberculosis. R practitioners holding B1 posts ineligible unless rejected by R.A.M.C. Salary £400 by £50 to £500 p a. Board, lodging and laundry or, if non-res., £100 p.a. cash allowance in lieu of residential emoluments. Additional cost of living bonus (now £60 p.a.), proportion only in cash if resident. Appointment in first instance for one year, medical examination. Whole-time duties, such as Council may require, under general supervision of Medical Director. Post vacant end of October, 1945. Application to The Clerk of the County Council, "Z." Application forms not provided. Closing date October 20, 1945.—C. W Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL. HOUSE SURGEON (Res., A) required at ASHFORD COUNTY HOSPITAL, London Road, Ashford, Middlesex, for general surgical wards.—Applications invited from registered medical practitioners (men only) including those within three months of qualification who are liable to service under National Service Acts. Salary £120 p.a. plus cost of living bonus (now £60 p.a., proportion only paid in cash), board, lodging and laundry. Whole-time duties, such as Council may require, under supervision of Medical Director. Six months appointment. Post vacant November 1, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date, October 20, 1945.—C. W Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MONMOUTHSHIRE COUNTY COUNCIL. The County Hospital, Panteg, Griffithstown. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, female, for the appointment of Assistant Resident Medical Officer at the County Hospital, Panteg (B2), including W practitioners who now hold A posts. The appointment will be for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments. Applications to be forwarded to the Medical Superintendent at the hospital as soon as possible.—D. Rocyn Jones, County Medical Officer, County Hall, Newport, Mon.

SURREY COUNTY COUNCIL. Epsom County Hospital, Dorking Road, Epsom (350 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT MEDICAL OFFICER (B2) including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to 6 months, otherwise it will not exceed 1 year. Applicants must have held house appointments with general experience and should be capable of administering anaesthetics. Salary at the rate of £250 p.a. plus full residential emoluments and war bonus.—Apply to the Medical Superintendent at the hospital by October 20, 1945.

STAFFORDSHIRE GENERAL INFIRMARY Stafford.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A) Salary £196 per annum, with board residence. Practitioners within three months of qualification and liable under the National Service Acts may also apply, when appointment will be for six months Applications to be forwarded to the undersigned.—A E. Collins, Secretary.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

Applications, including those from practitioners serving in His Majesty's Forces, are also invited for the post of additional ASSISTANT ORTHOPAEDIC SURGEON. The successful candidate must be a Fellow of one of the Royal Colleges of Surgeons. Applications should be sent to the undersigned not later than February 1, 1946.—P. Melhuish, Secretary.

PONTEFRACT GENERAL INFIRMARY and THE HYDES HOSPITAL (112 beds)—Applications are invited from registered medical practitioners, male, for the appointment of a HOUSE SURGEON (A), to become vacant immediately, including practitioners within three months of qualification who are liable to service under the National Service Acts, when appointment will be for a period of six months. Salary £150 per annum, with full residential emoluments. Applications should be sent to the undersigned.—D. J. Richards, Secretary-Superintendent

---

ROYAL DEVON AND EXETER HOSPITAL, Exeter.—Applications, including those from practitioners now serving in H.M. Forces, are invited for the post of HONORARY ASSISTANT SURGEON to the Ear, Nose and Throat Department. Candidates must be a Fellow of one of the Royal Colleges of Surgeons or hold the Diploma of the Royal College of Surgeons of England in Laryngology and Otology. Applications, with certificate of birth and registration, and three original testimonials, should be delivered to the undersigned on or before January 31, 1946. Candidates on Service abroad can send names of three persons to whom application may be made for testimonials.—By order of the Committee, L. Parkhouse, Secretary and Manager.

ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY, Wigan (189 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), to become vacant on November 1, 1945. Applicants should have held house appointments and had surgical experience. Preference will be given to candidates holding Diploma of F.R.C.S. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £300 per annum.

Applications are also invited from registered medical practitioners for the appointment of a HOUSE SURGEON (B2), male, vacant now. Salary £175 per annum, with full residential emoluments. R practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise it may be extended for a further period.

Applications for each post should be sent to the undersigned as soon as possible.—A. Stanley Brunt, General Superintendent and Secretary.

ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL, Southampton (255 beds). CASUALTY OFFICER and HOUSE SURGEON to E.N.T. Department (A).—Applications are invited from registered medical practitioners, male and female, for the appointment of a Casualty Officer and House Surgeon to the E.N.T. Department (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately.—Frank Jennings, House Governor and Secretary.

ROYAL DEVON AND EXETER HOSPITAL, Exeter (448 beds, six resident medical staff employed).—Applications are invited from registered medical practitioners, male or female, for the post of HOUSE PHYSICIAN (A), becoming vacant October 26. Salary is at the rate of £180 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months. Applications should reach the undersigned by October 12 next.—L. Parkhouse, Secretary and Manager.

ROYAL SALOP INFIRMARY, Shrewsbury.—Applications are invited from suitably qualified medical practitioners for the whole-time appointment of TEMPORARY ASSISTANT PATHOLOGIST. The duties include public health bacteriology, haematology, morbid anatomy, and histology. The appointment is for one year at an inclusive salary of £700 per annum. Applications should be forwarded to the undersigned on or before Saturday, October 20.—J. P. Mallett, Secretary-Superintendent

APPOINTMENTS—Hospitals and Public Health, commence at page 10

NOTICES

APPLICANTS ARE ADVISED not to send original testimonials when replying to advertisements. Copies will answer the purpose quite as well, and in the event of their being lost or mislaid no inconvenience will ensue.

EVERY EFFORT IS MADE to ensure the accuracy of advertisements appearing in the *Journal*. No recommendation is implied by acceptance, and the British Medical Association reserves the right to refuse or interrupt the insertion of any advertisement.

ROYAL COLLEGE OF SURGEONS OF ENGLAND.
ANNUAL MEETING OF FELLOWS AND MEMBERS

Notice is hereby given that it is proposed to hold a Meeting of Fellows and Members at the College in Lincoln's Inn Fields on Thursday, November 15, 1945, at 5 p.m., and that a Report from the Council will be laid before the Meeting. Fellows and Members can obtain copies of the Report on application to the Secretary, and can, if they so desire, have their names placed on the list of those to whom the Report is sent annually. Motions to be brought forward at the Meeting must be signed by the mover, or by the mover and other Fellows and Members, and must be received by the Secretary not later than November 5. A copy of the Agenda will be issued on or after November 12 to any Fellow or Member who may apply for one.—Kennedy Cassels, Secretary, Lincoln's Inn Fields, London, W.C.2.

ST. GEORGE'S HOSPITAL, S.W.1. DEPARTMENT OF RADIOTHERAPY.—The Committee of St. George's Hospital, Hyde Park Corner, London, S.W.1, regret that, pending the rebuilding of the Hospital, it is necessary, owing to the lack of accommodation, to close the Radiotherapy Department on December 31 next, and that new patients for treatment in that Department cannot be accepted after November 1, 1945.—William E. Hall, Secretary and Accountant.

THE FACT THAT GOODS made of raw materials in short supply owing to war conditions are advertised in this Journal should not be taken as an indication that they are necessarily available for export.

UNIVERSITY AND INDUSTRIAL APPOINTMENTS

BRITISH POSTGRADUATE MEDICAL SCHOOL (University of London).—Applications are invited for the post of SENIOR LECTURER in Clinical Pathology. Salary according to qualifications and experience, not less than £700 per annum. Further particulars as to duties to be obtained from the Professor of Pathology. Practitioners now serving in H.M. Forces may apply. Applications, accompanied by three testimonials, should reach the Dean, British Postgraduate Medical School, Ducane Road, Shepherd's Bush, W.12, not later than February 1, 1946

SHIP'S SURGEON REQUIRED for voyage to India, approximately 4½ months, salary £35 per month, plus £10 special bonus, whilst in operation, total £45 per month, previous experience not necessary, send full particulars.—Box 2751, B.M.J.

UNIVERSITY OF BIRMINGHAM. Faculty of Medicine. Department of Physiology.—Applications are invited for the following posts: (1) LECTURER IN PHYSIOLOGY at a salary of not less than £500 per annum. Practitioners now serving in H.M. Forces are invited to apply. Latest date for receipt of applications January 29, 1946. (2) ASSISTANT LECTURER IN PHYSIOLOGY. Temporary appointment at a salary not less than £350 per annum. Latest date for receipt of applications November 30, 1945. Applications, stating age, qualifications and experience, and giving the names of three persons to whom reference may be made, should be sent to the undersigned, from whom further particulars may be obtained. Testimonials are not required. C. G. Burton, Secretary, The University, Edmund Street, Birmingham, 3.

UNIVERSITY OF ABERDEEN. LECTURESHIP IN THE DEPARTMENT OF PHYSIOLOGY.—The University Court will shortly proceed to the appointment of a Lecturer in the Department of Physiology. Salary £400 to £500. Persons desirous of being considered for the office are requested to lodge their names with the Secretary to the University on or before January 29, 1946. Practitioners now serving in H.M. Forces may apply. Conditions of appointment may be obtained from the undersigned. —H. J. Butchart, Secretary, The University, Aberdeen.

UNIVERSITY OF ST. ANDREWS.—The University Court of the University of St. Andrews, in association with the Directors of the Dundee Royal Infirmary, invites applications for the post of LECTURER in ORTHOPAEDICS in the University and SURGEON in charge of the Department of Orthopaedics of the Infirmary. Applications are also invited from Service candidates. By arrangement, the lecturer will act as Orthopaedics Officer to the Corporation of Dundee, the County Council of Angus, the County Council of Perth, the Town Council of Perth, and the Town Council of Arbroath. He will also be given an honorary appointment by the Department of Health for Scotland as Visiting Orthopaedic Surgeon to Stracathro E.M.S. Hospital. The stipend for the combined offices (inclusive of travelling expenses) will be £1,250 p.a., and the lecturer may engage in private practice as an orthopaedic surgeon in so far as this does not interfere with the discharge of the duties of the above appointments. Applications, supported by testimonials and/or references, will be received up to January 29, 1946. If desired, further information may be obtained on application to the undersigned. David J. B. Ritchie, Secretary to the University of St. Andrews, The University, St. Andrews.

UNIVERSITY OF LONDON.—The Senate invite applications for the READERSHIP IN PUBLIC HEALTH tenable at the London School of Hygiene and Tropical Medicine (salary £1,050). Practitioners serving in H.M. Forces may apply. Applications must be received not later than January 29, 1946, by the Academic Registrar, University of London, Richmond College, Richmond, Surrey, from whom further particulars should be obtained.

DIPLOMA IN MEDICAL RADIOTHERAPY
R.C.P. AND S. ENG.
COURSE OF INSTRUCTION IN MANCHESTER.
The regulations for the Diploma require a course of study extending over two years. During the first nine months candidates are required to attend a course of systematic instruction. The rest of the time must be spent in the Radiotherapeutic Department of a recognized hospital. To meet these requirements a course of instruction will begin at the Holt Radium Institute, Manchester, early in January, 1946. Lectures and practical demonstrations will be given in the following subjects:—Physics as applied to Radiotherapy, W. J. Meredith and Physics Staff; Biological Effects of Radiation, Dr. Edith Paterson and Dr. W. M. Dale; Pathology in Relation to Radiotherapy, Prof. S. Baker and Dr. H. Russell; Principles and Practice of Radiotherapy, Dr. Ralston Paterson and Radiotherapy Staff. Inclusive fee 50 guineas. Thereafter it is hoped that paid posts will be found for candidates in Radiotherapeutic departments where they may complete the attendance required by these regulations. Further information may be obtained from the Dean of the Medical School, University of Manchester, to whom all applications must be sent. All applicants will be required to attend for interview before being accepted for the course. Special consideration will be given to practitioners being demobilized. Service candidates may be eligible for grants under the postgraduate education scheme.

LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE.—It is proposed to offer a QUALIFYING COURSE for the DIPLOMA in PUBLIC HEALTH during the academic year 1945-'46, with the examination for the Diploma in the summer of 1946. The course is designed primarily for released Service men and women, and in order to give as much opportunity as possible for candidates the opening of the course will be postponed until Monday, November 5, 1945. Application forms may be obtained from the Dean, London School of Hygiene and Tropical Medicine, Keppel Street (Gower Street), London, W.C.1.

APPOINTMENTS

(Continued from page 13)

ROYAL UNITED HOSPITAL, Bath.—ORTHOPAEDIC and FRACTURE HOUSE SURGEON (B1).—Applications are invited for the above appointment from registered medical practitioners, including R and W practitioners who now hold B2 posts. Applications from R and W practitioners who now hold B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary £250 per annum, with board residence and laundry. Applications to be addressed at once to the undersigned.—J. Lawrence Mears, Secretary-Superintendent.

ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL (255 beds). HOUSE SURGEON (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Surgeon (B2), including R and W practitioners who now hold A posts. The appointment will be for a period of six months. The salary is £175 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately. Frank Jennings, House Governor and Secretary.

ROFFEY PARK REHABILITATION CENTRE, Horsham (106 beds).—Applications are invited for the post of MEDICAL OFFICER (B1). Salary £500 per annum with use of unfurnished flat. Preference given to one with psychiatric experience. Suitably qualified R practitioners holding B2 appointments, also those holding B1 and rejected by R.A.M.C., may apply. Applications should be sent to the Medical Director.

THE ROYAL EASTERN COUNTIES INSTITUTION FOR MENTAL DEFECTIVES, Colchester.—Applications are invited for a LOCUM TENENS MEDICAL OFFICER (B1), at a salary of £10 10s. weekly, together with board, lodging, laundry and attendance. Previous experience of mental deficiency desirable but not essential. Applications should be sent to the Acting Medical Superintendent as soon as possible.

THE ROYAL NATIONAL THROAT, NOSE, AND EAR HOSPITAL, Gray's Inn Road, W.C.1, and Golden Square, W.1. ASSISTANTS IN THE OUT-PATIENT DEPARTMENTS.—There are vacancies for attendance at the following times at Golden Square Hospital: Mondays, Tuesdays and Fridays, 2 p.m.; Saturdays, 10 a.m. The appointments, which are honorary ones, afford a good opportunity of acquiring extended clinical knowledge of the speciality, as the work consists of assisting the surgeons in seeing patients. Applications, which may be for a period of three, six, or twelve months, should be sent to the undersigned immediately.—John H. Young, Secretary-Superintendent.

SALFORD ROYAL HOSPITAL.—Applications are invited for the post of RESIDENT SURGICAL OFFICER (B1). Salary £250, plus the usual residential emoluments. Appointment one year. R practitioners holding B2 posts, also those holding B1 and rejected by the R.A.M.C., may apply. Applications to be made on the prescribed form obtainable from the General Superintendent at the Hospital.

ST. MARK'S HOSPITAL FOR CANCER, FISTULA and Other Diseases of the Rectum, City Road, London, E.C.1.—Applications are invited from registered medical practitioners (male) for the appointment of HOUSE SURGEON (B2) vacant on December 1, 1945. The appointment is for six months. Salary at the rate of £150 per annum, with full residential emoluments. R practitioners who now hold A posts may apply. Applications should be sent to the undersigned. Raymond Bull, Secretary.

STRATFORD-ON-AVON EMERGENCY HOSPITAL. County of Warwick.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2). Salary £300 per annum with the usual residential emoluments. R and W practitioners holding A posts may also apply, and in the case of R practitioners appointment will be limited to six months, otherwise it will not exceed one year.

RESIDENT SURGICAL OFFICER (B1). Applications are invited from registered medical practitioners for the appointment of Resident Surgical Officer (B1). Applicants should have held house appointments and had surgical experience. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £350 per annum, with full residential emoluments. The appointment is limited to a period of one year.

Applications for each post on forms to be obtained from H J Kotch, Shire Hall, Warwick, should, on completion, be returned to him not later than October 20, 1945.

ST. GEORGE'S HOSPITAL, S.W.1.—Applications are invited for the post of MEDICAL FIRST ASSISTANT (B1), male, to be instituted from October 1, 1945. R practitioners who now hold B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. The duties will be full-time and will include the clinical care of a medical firm under the direction of a physician and an assistant physician; also the keeping of hospital records and instruction of students. Salary £450 p.a. The appointment will be for one year in the first instance, renewable annually up to three years. Applicants must hold the M.R.C.P. Applications to be sent to the Secretary, St. George's Hospital, London, S.W.1, as soon as possible.

SOUTHEND GENERAL HOSPITAL.—Applications are invited from registered practitioners for the post of RESIDENT ANAESTHETIST (B2). Salary will be at the rate of £200 per annum, with full residential emoluments. This post is recognized for the Diploma in Anaesthetics. R and W practitioners holding A posts may also apply, when the appointment will be limited to six months. The post is now vacant.

HOUSE SURGEON (A) required to commence duty on November 1. This post is recognized by the Royal College of Surgeons. Salary at the rate of £150 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months.

Applications for each post to be sent as soon as possible to the undersigned.—E. A. Camp, Acting Assistant Secretary.

STANNINGTON CHILDREN'S SANATORIUM Stannington, Clifton, Morpeth, Northumberland (206 beds for pulmonary and non-pulmonary tuberculosis).—Applications are invited from registered female medical practitioners for B1 APPOINTMENT at the above Sanatorium. Applicants should have held a house appointment and preference will be given to those having some experience in bacteriology. W practitioners now holding B2 posts may apply. Salary £300 to £350 per annum, according to experience, with residential emoluments. Applications should be forwarded immediately to the undersigned.—J. Arnold Stobb, Medical Superintendent.

TILBURY HOSPITAL, Tilbury, Essex.—Applications are invited from registered medical practitioners for the appointment of male RESIDENT SURGICAL HOUSE OFFICER (B1) to become vacant on November 1, 1945. Applicants should have held house appointments and had surgical experience. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at £350 p.a. Applications to be sent to the Resident Secretary, Tilbury Hospital, Tilbury, Essex.—F. A. Lyon, Administrator and Secretary, Seamen's Hospital Society.

TAUNTON AND SOMERSET HOSPITAL (136 beds, plus 30 E.M.S. 3 residents).—Applications are invited from registered medical practitioners male and female, for the appointment of HOUSE SURGEON (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. Salary £175 p.a., with full residential emoluments. If held by a practitioner liable under these Acts, appointment will be for six months. Applications to the Secretary-Superintendent, Taunton and Somerset Hospital, Taunton.

THE WILLESDEN GENERAL HOSPITAL, Harlesden Road N.W.10.—Applications are invited for the resident appointment of CASUALTY OFFICER (B[illegible]). Vacant November 1, 1945, including R and W practitioners who now hold A posts. Salary at the rate of £175 per annum with full residential emoluments. The appointment will be for a period of six months. Applications should be sent to the undersigned immediately.—J. N. Drake, Secretary.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 10

THE CHILDREN'S HOSPITAL, King Edward VII Memorial, Birmingham, 16.—ASSISTANT RESIDENT SURGICAL OFFICER (B2). Applications are invited from registered medical practitioners, male or female, for the appointment of Assistant Resident Surgical Officer (B2), now vacant, including R and W practitioners who now hold A posts. Applicants must have had surgical experience. The salary is at the rate of £150 per annum, with full residential emoluments, and the appointment is tenable for six months.

ASSISTANT CASUALTY OFFICER.—Applications are also invited from registered medical practitioners, male or female, for the appointment of Assistant Casualty Officer (B2) including R and W practitioners who now hold A posts. Applicants must have had surgical experience. The salary is at the rate of £150 per annum with full residential emoluments and the appointment is tenable for six months.

Applications for each post should be sent to the undersigned as soon as possible.—Arnold Tunstall, House Governor.

THE CHILDREN'S HOSPITAL, Sunderland (in Association with the Royal Infirmary, Sunderland) 70 beds.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A) and HOUSE PHYSICIAN (A) now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for a period of six months. Salary is at the rate of £175 per annum with full residential emoluments.—T. F. W. Mackeown, House Governor and Secretary.

VICTORIA HOSPITAL, Blackpool (normal complement 200 beds, war-time complement 500 beds).—Applications are invited from registered medical practitioners, male or female, for the following appointments (B2) now vacant, including R practitioners who now hold A posts:

(1) HOUSE SURGEON to Orthopaedic Department and Surgical Unit 1.

(2) HOUSE SURGEON Eye, Ear, Nose and Throat Departments.

The appointments are for a period of six months' and the salary is at the rate of £200 per annum with full residential emoluments, plus £150 per annum in the case of the successful applicants being Medical Officers released from H M. Forces who desire postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications are also invited from registered medical practitioners, male or female, for the appointment of RESIDENT ANAESTHETIST (B2), to become vacant shortly. R and W practitioners who hold A posts may apply. The appointment is for a period of six months. Modern equipment is provided, and there are facilities available for a candidate studying for the Diploma in Anaesthetics. Salary is at the rate of £[illegible]00 per annum, with full residential emoluments, plus an additional £50 if the successful applicant is a Medical Officer released from H M. Forces who desires postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications are also invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1). Preference will be given to candidates holding the Diploma F.R.C.S., R and W practitioners who now hold B2 posts may apply. Applications from R and W practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. The appointment will be for a period of twelve months. Salary is at the rate of £400 per annum with full residential emoluments, plus £150 per annum in the case of the successful applicant being a Medical Officer released from His Majesty's Forces who desires postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications for each post should be sent immediately to—Walter R. Smith, General Superintendent.

WORCESTER ROYAL INFIRMARY.—Applications are invited for the position of HOUSE SURGEON (A). The salary will be at the rate of £120 a year, with full residential emoluments Practitioners within three months of qualification and liable under National Service Acts may apply when the appointment will be for six months Applications should be addressed to the undersigned.—Harold Wigg, Acting Supt.-Secretary.

WEST HERTS HOSPITAL. HOUSE PHYSICIAN (B2).—Applications are invited from registered medical practitioners for the appointment of Resident House Physician (B2), to become vacant on November 1, including R practitioners who now hold A posts. The appointment will be for a period of six months. The salary is at the rate of £200 per annum with full residential emoluments. Applications should be sent to the undersigned not later than Monday, October 8, 1945.—J. Price Jones, Clerk to the Hospital.

WHITEHAVEN & WEST CUMBERLAND HOSPITAL (Voluntary General. Hospital with 110 beds, Maternity Unit, Out-patient and Casualty Departments and modern Fracture Clinic and Rehabilitation Centre).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A) post now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. Appointment will be for a period of six months at a salary of £200 p.a. with full residential emoluments. Applications should be sent to the undersigned T. W. Lymer, Secretary Superintendent.

WHITCHURCH EMERGENCY HOSPITAL, Cardiff (800 beds).—Applications are invited from registered medical practitioners (male and female) for the following appointments now vacant:—HOUSE PHYSICIAN (A). Practitioners within three months of qualification who are liable to service under the National Service Acts may apply.

HOUSE PHYSICIAN (B2). R and W practitioners who now hold A posts may apply. The appointments are both for six months and the salary is at the rate of £200 per annum, with full residential emoluments Applications should be sent to the Medical Superintendent.

VICTORIA HOSPITAL, Deal. HOUSE SURGEON (B2).—Applications are invited for the post of House Surgeon at a salary not exceeding £300 p.a. R and W practitioners now holding A posts may apply. If held by an R practitioner appointment will be limited to six months. Applications should be sent to the Secretary, Victoria Hospital, Deal, immediately.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant immediately, whose main duties are in the Eye, Ear, Nose and Throat Department (37 beds with busy Out-patient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months Salary is at the rate of £175 per annum, with full residential emoluments This post is recognized for D.O.M.S and D.L.O. examinations Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary

---

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ORTHOPAEDIC HOUSE SURGEON AND CASUALTY OFFICER (B2), vacant immediately, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. The salary is at the rate of £175 per annum, with full residential emoluments. Applications to be sent to the undersigned immediately.—J. R. Mackrill Secretary.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY OCTOBER 13 1945

British Medical Association

REPORT OF INSURANCE ACTS COMMITTEE, 1945

Dr. E. A. Gregg was reappointed Chairman of the Committee for the session 1944-5.

Ministry of Health Distribution Committee

The Committee's nominees on the Ministry of Health Distribution Committee in connexion with the Central Practitioners' and Mileage Funds are: Dr. E. A. Gregg (London), Dr. L. J. Picton (Holmes Chapel), Dr. D. B. Evans (Coedpoeth), and the Secretary (Dr. C. Hill), together with Dr. J. A. Pridham (Weymouth, Dorset), Dr. J. C. Pearce (Diss, Norfolk), and Dr. J. D. Wells (Billericay, Essex), when questions concerning mileage are under consideration.

Panel Conference Standing Orders

Some doubt has been expressed as to whether Standing Order (xx) (b) in its present form clearly defines those who may be nominated for election by the Panel Conference as members of the Insurance Acts Committee. The following recommendation, amending Standing Order (xx) (b), is accordingly submitted for adoption by the Conference:

RECOMMENDATION: That Standing Order (xx) (b) of the Conference be amended to read as follows:

> "Nominations may be made only by representatives, and a representative may make not more than one nomination. Any registered medical practitioner actively engaged in N.H.I. practice, whether a member of the Conference or not, is eligible for nomination."

Ministry of National Insurance

An Order in Council entitled the Ministry of National Insurance (Health Insurance and Pensions) Order, 1945, has been made under the Ministry of National Insurance Act, 1944, transferring certain functions of the Ministry of Health and Secretary of State for Scotland regarding health insurance and other matters to the Ministry of National Insurance as from April 1, 1945. The Order in Council will not affect the administration of medical benefit or the constitution, functions, etc., of insurance committees, and no amendment has been made in the Medical Benefit Regulations or the insurance committees' regulations. Insurance committees will therefore continue to be associated with the Ministry of Health and the Department of Health for Scotland in regard to matters arising under these regulations.

The functions of the Ministry of Health and Secretary of State for Scotland under the Deposit Contributors Regulations have been transferred to the Ministry of National Insurance, and that Ministry will, in future, be the central department with which insurance committees will deal so far as the administration of cash benefits for deposit contributors is concerned.

Standards of Remuneration

The Interdepartmental Committee on the Remuneration of General Practitioners, or, to give it its popular title, the Spens Committee, has been given the following terms of reference:

> To consider, after obtaining whatever information and evidence it thinks fit, what ought to be the range of total professional income of a registered medical practitioner in any publicly organized service of general medical practice; to consider this with due regard to what have been the normal financial expectations of general medical practice in the past, and to the desirability of maintaining in the future the proper social and economic status of general medical practice and its power to attract a suitable type of recruit to the profession; and to make recommendations.

The personnel of the committee consists of an independent chairman (Sir Will Spens, Master of Corpus Christi College, Cambridge), a solicitor (Mr. E. Davies, London), an accountant (Mr. T. Lister, London), a trade union official (Mr. J. L. Smyth, Secretary, Social Insurance Department, T.U.C.), a Treasury representative (Sir Ernest Fass, former Public Trustee), and four general practitioners (Dr. J. A. Brown, Birmingham; Dr. O. C. Carter, Bournemouth; Dr. W. M. Knox, Glasgow; and Dr. S. A. Winstanley, Urmston, nr. Manchester) nominated by the B.M.A. One of the joint secretaries is Dr. A. V. Kelynack, Assistant Secretary of the B.M.A.

The preparation of the Association's evidence to the Spens Committee is in the hands of a joint subcommittee of the Insurance Acts and General Practice Committees. In accordance with the promise given at the last Annual Conference, the personnel of this subcommittee has been strengthened by the addition of practitioners from Wales, Lancashire, and Yorkshire. As a first step it was decided to carry out a statistical inquiry designed to provide factual information on the range of pre-war incomes of doctors of different ages in a variety of types of general practice. The inquiry was conducted under the direction of Prof. A. Bradford Hill, D.Sc., Ph.D., Professor of Statistics at London University, and covered approximately 5,000 general practitioners selected at random from all practitioners in Great Britain who were predominantly engaged in general practice before the war. They were asked to provide particulars of their professional income and expenditure for three successive pre-war years (1936-8).

A memorandum of evidence has already been prepared and presented to the Spens Committee by the Association's principal witnesses: Dr. H. Guy Dain (Chairman of Council), Dr. E. A. Gregg (Chairman of the Insurance Acts Committee), Dr. S. Wand (Chairman of the General Practice Committee), Dr. I. D. Grant (Glasgow), and Dr. Charles Hill (Secretary of the B.M.A.). These witnesses have been invited to give further evidence in October, and there will probably be a number of questions on which the Spens Committee will ask for further evidence from the Association before it completes its deliberations. At the request of the Spens Committee some ten special witnesses were selected and have given evidence on special conditions of general medical practice, excluding questions of remuneration, in different types of area.

The Future of Medical Services

With one exception the various resolutions of the last Annual Conference concerning the proposed National Health Service were passed on to the Negotiating Committee. Minute 64 asked the Insurance Acts Committee to consider the desirability of medical practitioners entering the new service being organized in three classes, with differing methods of remuneration for each class. This suggestion found very little support among the members of the committee and has not been recommended to the Negotiating Committee.

Special Capitation Fee for Invalided Services Personnel

It was represented to the Committee that in some cases practitioners had not claimed the special fee in respect of insured persons discharged from the Services on medical grounds and placed on their lists before Feb. 1, 1944, because of the difficulty in completing the Form G.P. 111A. The Ministry was asked to press the Service Departments to provide lists of those discharged on medical grounds before Feb. 1, 1944, but it is understood that the reply of the Service Departments is that this proposal is not practicable. An assurance has been given that the expression used by the War Office "ceasing to fulfil Army physical requirements" indicates discharge on medical grounds, and where this phrase is used the higher capitation fee is payable.

The Ministry was asked to arrange that individual insurance practitioners should be supplied periodically by insurance committees with the names of recent additions to their lists in respect of whom the higher capitation fee is being paid. The Ministry's reply is that it is believed to be the practice of insurance committees to show the number of invalided persons in the quarterly statement sent to insurance practitioners, and that this information should suffice. The Committee asked that men discharged from the Royal Merchant Navy on medical grounds be included among those for whom the higher capitation fee is payable, but the Ministry is unable to agree to this request. The main difficulty appears to be that men of the Merchant Navy are essentially in civilian employment, and there is no system of discharge on medical grounds. After a period of disability they often go back into employment in the Merchant Navy.

Certification

In accordance with an undertaking given at the last Annual Conference (Min. 155), the Ministry of Health was again asked to consider the Committee's request for an extension to three months of the present interval of one month allowed for the issue of a special intermediate certificate. The Ministry has not agreed to the suggestion in its entirety, but has agreed to amend the certification rules so that special intermediate certificates may be given at intervals of not longer than eight weeks after six months of continuous incapacity. There is to be no change in the condition attaching to the issue of these certificates—namely, that the patient does not require treatment at more frequent intervals than that specified by the doctor.

It is proposed by the Ministry that Rules 5 and 12 be combined to read as follows:

> 5.—(1) If incapacity continues beyond eight days from the date of the first certificate the practitioner shall give further intermediate certificates, if so desired by the insured person, during the continuance of incapacity.
>
> (2) Except as hereinafter provided in relation to cases where the incapacity is likely to be prolonged, an intermediate certificate shall be given in every insurance week.
>
> (3) If in any case the practitioner, not earlier than one month after he has first given a certificate, is satisfied that the incapacity is likely to be prolonged, and that, owing to the nature of the disease or disablement, examination and treatment at intervals of more than one week will be sufficient, he may give special intermediate certificates in the form appended below indicating in each certificate that he proposes to give further certificates at specified intervals longer than one week. The intervals so specified in any certificate shall not exceed four weeks, or, if the incapacity has continued for at least six months, eight weeks. Unless and until the society give notice to the practitioner that they object to the proposed procedure certificates may be given at the intervals specified, and for this purpose a certificate which is given during the insurance week in which the specified interval expires shall be deemed to have been given within the specified interval.
>
> (4) If at any time notice of objection is given by the society the practitioner may refer the matter to the medical officer, who shall have power to determine, for the purposes of these rules, at what intervals certificates are to be given by the practitioner.
>
> (5) During the period between the receipt by the practitioner of notice of objection on the part of the society and the decision of the medical officer the practitioner shall give certificates at weekly intervals in accordance with these rules.
>
> (6) In this rule "insurance week" means the period from midnight on one Sunday to midnight on the following Sunday.

The Insurance Acts Committee has approved the draft new rule in principle, but is asking the Ministry to consider a modification of subparagraph (5) so as to provide that in cases where an objection to certificates at eight-weekly intervals is raised by an approved society, the practitioner may continue to issue certificates at eight-weekly intervals pending consideration of the objection. The question of the actual date from which the first special intermediate certificate may be given is also being raised.

The Ministry does not feel justified in adopting the Committee's further suggestion that provision should be made for the issue of special intermediate certificates before the end of the first month of incapacity.

Medical Records

It was suggested to the Ministry that the medical record card of a person ceasing to be entitled to medical benefit might be sent to the patient's doctor for his use after the record had been endorsed to show that the patient was no longer entitled to medical benefit under the National Health Insurance Act. The Ministry is unable to adopt the Committee's suggestion, but has disclosed that insurance committees generally are prepared to meet a request from a doctor for the loan of a medical record in an individual case.

As soon as conditions associated with the storage of medical records are more favourable the Ministry will be prepared to consider a return to the pre-war practice of keeping for five years the medical records of insured persons whose title to medical benefit has lapsed.

Dispensing: Sulphonamides

The Ministry was asked to give further consideration to the Committee's earlier request for the inclusion of the whole of the sulphonamide group of drugs in the list appended to Part II of the Distribution Scheme, and has agreed to the inclusion of the following preparations in the list: sulphathiazole *B.P.*, sulphamezathine, sulphadiazine *B.P.*, sulphaguanidine *B.P.*, and succinyl-sulphathiazole.

Regional Medical Service: Reference of Tuberculous Patients

In June last the Ministry of Health issued a circular letter to local authorities in England from which it was clear that Divisional Medical Officers had been instructed that, in cases where an insured person had been referred to a D.M.O. for an independent medical examination, and a tuberculous condition was diagnosed, the D.M.O. was empowered to refer the insured person to the appropriate tuberculosis officer for specialist examination and report. The circular went on to say that the Minister felt sure that local authorities would be glad to have such cases brought within the purview of their tuberculosis service in this way, and that he could rely upon tuberculosis officers to assist his D.M.O.s in examining and reporting on cases so referred.

The Insurance Acts Committee took the strongest possible exception to this procedure. It was considered that the Minister's action was contrary to the generally recognized procedure that where an investigation or treatment of a specialist character was considered by the D.M.O. to be advisable, the patient's own doctor would be informed in order that he might pursue the matter with the tuberculosis officer or take such other appropriate steps as he thought advisable.

No exception could be taken to the inclusion in the D.M.O.'s report to the attending practitioner of suggestions as to the future conduct of the case or even the offer of facilities for special investigations. The effect of the Ministry's circular, however, was to extend the functions of the regional medical staff in a way which interfered with an insurance practitioner's responsibility for the care of his patient and introduced a dual responsibility that was not in the best interest of the patient. Insurance practitioners could not accept a position in which a D.M.O.'s service was to be regarded as of a consultant nature in the clinical aspect of the case.

Representations on these lines were made to the Ministry of Health, and a reply has been received stating that in those cases where the opinion of a specialist is considered to be desirable for reasons other than to enable the examining medical officer to report whether or not an insured person is incapable of work, no steps will be taken for the specialist examination before obtaining the consent of the insured person's own doctor.

The Committee notes that the Ministry does not propose to vary the procedure under which insured persons are referred to specialists solely for the purpose of assisting the examining medical officer to report on an incapacity reference. While recognizing that this is the present position, the Committee feels that it would be in the interest of the patient, the N.H.I. medical service, and the maintenance of a high standard in the settlement of cases of doubtful incapacity for work, if *all* references to specialists were made after consultation with the insured person's doctor.

New Entrants

The 1944 Annual Conference referred to the Committee for consideration a request that a method should be devised which would enable a medical card to be issued immediately the first stamp is affixed to the insured person's contribution card. As a practical proposal to give effect to this request, the Committee suggested to the Ministry that Form Med. 50 be so amended as to show that the insured person is, in fact, employed. The Ministry does not consider it desirable to provide on Form Med. 50 a form of certificate for completion by the employer, but is considering a proposal to provide a space on the form for the insertion of the name and address of the employer.

Irregular Removal of Names from Doctors' Lists

The attention of the Ministry of Health was drawn to complaints received by the Committee that, to an increasing extent, insured persons' names were being removed from doctors' lists, although the insured persons themselves had been in continuous employment. It was recognized that the main reason for this was the failure of insured persons to send in their contribution cards, but the Ministry was informed that the Committee would welcome any action that could be taken, possibly by way of an appropriate communication to approved societies, to minimize what was becoming an increasing source of irritation and annoyance to doctors.

Inquiries by the Ministry of National Insurance through its records branch did not reveal any appreciable worsening of the position, the main causes of which appear to be staff shortage in approved society offices and the introduction of the yearly contribution card. The Ministry is reminding approved societies, however, of the desirability of issuing to their members notices of impending termination of insurance well in advance of the actual date of termination, so that those members whose insurance is not due to end may take steps to put the matter right before the suspension becomes effective.

The Ministry is being informed that the experience of the Insurance Acts Committee members does not confirm the view that there has not been any appreciable increase in irregular removals from doctors' lists.

Sickness Benefit and Pregnancy

The resolutions (Minutes 120, 122, and 123) of the 1944 Annual Conference, together with a similar resolution passed by the Annual Representative Meeting of the B.M.A., were brought to the notice of the Ministry of Health. The Ministry had previously promised to issue a revised memorandum on the subject to insurance practitioners, approved societies, and insurance committees, and a draft of the proposed memorandum had actually been prepared when the White Paper on Social Insurance made its appearance. The White Paper contains proposals for payment in the case of employed women of a weekly maternity benefit for a total period of thirteen weeks extending on both sides of the date of confinement. Accordingly, the Ministry does not consider it desirable at this stage to make any modification of the present National Health Insurance scheme which might embarrass the working out of the proposals in the new scheme. In the opinion of the Ministry of National Insurance approved societies generally are not unreasonable in dealing with claims supported by medical certificates for pregnancy where confinement is expected to take place within six or eight weeks, but that Department would be prepared to make appropriate representations in any case in which an approved society does not take a reasonable view of incapacity during pregnancy.

The Ministry is not prepared to accept the suggestion contained in the resolution passed by the Annual Representative Meeting that an examination of a pregnant woman by a Regional Medical Officer should be made at home if she is within eight weeks of the expected date of confinement. It is understood that the notice (Form R.M.2) issued to the doctor from the divisional medical officer contains provision for the doctor to indicate whether the patient is fit to attend the examination centre.

The Committee is not satisfied with the Ministry's view and is continuing to press for all examinations within eight weeks of the expected date of confinement to be conducted at the patient's home.

Investigation of Title to Medical Benefit

The Ministry of Health agrees with the view expressed in a resolution passed at the 1944 Annual Representative Meeting "that it should not be left to insurance practitioners to investigate the title to medical benefit of persons alleged to have ceased insurance, this being clearly the duty of insurance committees and approved societies."

Post-war Financial Assistance for Doctors

In the Committee's last Annual Report reference was made to a joint subcommittee of the Insurance Acts and General Practice Committees which had been appointed to examine schemes for the financial assistance of medical practitioners in the purchase of practices, with special reference to the problem of young Service doctors entering medical practice after the war. The joint subcommittee has prepared a report on the subject, and a statement embodying the methods of securing financial assistance that are open to medical practitioners was published in the *Supplement* of June 9, 1945.

Tropical Diseases in Ex-Service Personnel

In reply to the Committee's request for information on the provision of facilities for the treatment of ex-Service men and women suffering from malaria and other tropical diseases the Ministry of Health states that all Service cases will be received into Service hospitals and civilians into E.M.S. hospitals, where they will be afforded whatever treatment may be required, and on discharge will, when necessary, be advised on out-patient facilities.

In April, 1942, after the extension of the war to the Far East, a letter of advice on the prevention, diagnosis, and treatment of malaria was sent to the medical officers of health of districts where conditions might be favourable in summer months for the spread of malaria. In December, 1943, all medical officers of health were reminded in the Ministry's *Monthly Bulletin* that the number of cases was likely to increase with the return of men from malarial countries, and were advised that it would be appropriate for them to inform doctors of the facilities locally available for consultant services and laboratory investigation. In addition, a pamphlet containing an article by a medical expert on the diagnosis of malarial infections was issued by the Ministry of Health in January, 1944, to all medical practitioners in England and Wales.

Panel Conference Dinner

The Annual Conference last year expressed a wish to revive the Annual Conference dinner in 1945, if possible. Arrangements have been made for the dinner to be held at the Savoy Hotel on the evening of the Conference, Nov. 15, and a communication on the subject has been sent to all Panel Committees.

National Insurance Defence Trust

The balance sheet and statement of expenditure and income of the Trust for the year ending Dec. 31, 1944, are being sent to every Panel Committee.

The Trustees have not yet completed their consideration of the question of forming a Guarantee Fund.

A Panel Committee raised the question whether the objects of the Trust could be amended to provide for financial assistance being given to doctors returning from active service to re-establish them in medical practice. The Trustees are advised legally: (1) that the present objects do not cover such a proposal; and (2) that the objects could not be varied without first obtaining the sanction of all contributors.

SCOTLAND

This particular section deals with matters which are of a purely domestic Scottish nature and which have not been referred to in the preceding paragraphs, or upon which action in England and Wales differs from that taken in Scotland.

Chairman and Deputy Chairman

Dr. J. F. Lambie (Glasgow) and Dr. A. F. Wilkie Millar (Edinburgh) were re-appointed Chairman and Deputy Chairman respectively for the session 1944–5.

Subcommittees, etc.

The Rural Practitioners Subcommittee was appointed. The Chairman, Deputy Chairman, Dr. Robert Bruce (Aberdeenshire), and Dr. R. W. Craig (Scottish Secretary) were nominated as members of the Advisory Distribution Committee of the Department of Health. The Department was informed that all members of the Insurance Acts Subcommittee would be available for service on Medical Advisory Committees constituted under the Medical Benefit Regulations (Scotland), 1938.

Conference of Representatives of Divisions and Panel Committees

A Conference of representatives of Divisions and Panel Committees in Scotland was held in the Scottish House of the Association on Oct. 24, 1944. Dr. A. F. Wilkie Millar presided and Dr. J. B. Miller was appointed Deputy Chairman. Dr. H. Guy Dain, Chairman of Council, and Dr. Charles Hill, Secretary of the Association, were present. The members of the Scottish Committee, the Insurance Acts Subcommittee (Scotland), and the Scottish Medical Consultative Committee also attended. The main purpose of the Conference was to consider a report by the Scottish Committee on the Scottish section of the White Paper on a National Health Service. A full report of the proceedings, including a summary of the more important resolutions, was published in the *Supplement* of Nov. 4, 1944.

Supplementary Medical Service

At a meeting held on Nov. 21, 1944, a report was received regarding the working of the Supplementary Medical Service (Clyde Basin Experiment). The chief object of this service was to provide facilities for early diagnosis and treatment. It offered: (1) consultant investigation, (2) hospital investigation and treatment, (3) convalescent home treatment. There had been no delay in admissions to hospital where this was required, and the large majority of patients had been able to return speedily to work. The Committee recorded their approval of the working of this service.

Maternity Services (Scotland) Act, 1937

The Committee welcomed the result of the efforts made by the Scottish Committee to secure a substantial improvement in the terms of service for medical practitioners under the Act. In particular they welcomed the withdrawal of the differentiation in the fees previously payable for insured and non-insured women respectively.

Ministry of National Insurance

Intimation was received from the Department of Health that an Order in Council, entitled the Ministry of National Insurance (Health Insurance and Pensions) Order, 1945, had recently been made under the Ministry of National Insurance Act, 1944, transferring certain functions of the Secretary of State for Scotland with respect to health insurance and other matters to the Minister of National Insurance as from April 1, 1945.

Dispensing: Calamine Lotion

A memorandum was received from the superintendent and clerk of the Drug Accounts Committee (Scotland) suggesting that as a wartime measure prescriptions for calamine lotion be interpreted as the *British Pharmaceutical Codex* preparation without the addition of rose water. It was agreed that the suggestion be approved.

National Health Service Proposals

At a meeting of the Committee held on April 10, 1945, the alternative proposals to those contained in the White Paper on which the Secretary of State for Scotland sought the views of those concerned were considered in detail and various resolutions were passed.

Number of Insured Persons

The Government Actuary's final determination of the number of insured persons in Scotland for whom payment would be made in respect of medical benefit for 1944 was 2,066,000, or 81,000 more than the provisional estimate. The provisional figure for 1945 is 2,008,000.

HEARD AT HEADQUARTERS

Scottish Prescribing

Frequency of prescribing in insurance practice in Scotland has not altered much during the last fifteen years. In 1944 the average number of prescriptions for each insured person was 1.8, and in 1929 it was 1.77, but the cost for each person has gone up from 2s. in the earlier year to 3s. 3d., and the average price of the prescription from 1s. 1½d. to 1s. 9½d. The rise in recent years is partly accounted for by insulin, which was not included at an earlier period.

Those who think of National Health Insurance prescribing as on the cheap side should study some of the cases which appear in the records of the Drug Accounts Committee for Scotland. One insured person during the years 1937 to 1945 received 830 prescriptions for extract of adrenal cortex at a total cost of over £1,000—the first recorded case in Scotland in which the cost of medicine for an insured person has run into four figures. From the point of view of expense the most remarkable individual prescription issued to an insured person was for 200 mg. of desoxycorticosterone acetate for surgical implantation. The cost of one tablet of this substance was £6 13s. The same patient received a second prescription for a tablet, together with four ampoules of the same substance for use by injection, at a total cost of £7 14s. 3d. In the case of another insured person the prescriptions given in one month priced up to over £10, the most expensive items being 19 lb. white lint and 32½ lb. of ichthyol paste.

A good deal of difference exists between the various parts of Scotland in this matter of prescribing. In Aberdeen the average frequency of prescription for each insured person is 2.2 and in Paisley 1.6; in the county of Bute it is 2.1 and in the county of Inverness 1.1; and while the average cost of a prescription is over 2s. in Edinburgh and Dunfermline, it is only 1s. 6d. in Greenock and Clydebank.

The Drug Accounts Committee also prices the prescriptions on behalf of a number of local authorities and other bodies. The average value of prescriptions issued on behalf of public assistance committees is about 2s. 6d., and of tuberculosis departments 3s. 6d., while for public medical services it is only 1s. 4d. Altogether, during 1944, in insurance prescribing and that of local authorities and various other public services, leaving on one side, of course, voluntary hospital and private prescribing, almost as many prescriptions were issued as there are people in Scotland and the cost was £390,000.

Local Medical War Committees

At this time, when praises and decorations are being distributed for wartime work, a word at least should be said about Local Medical War Committees. Their job has perhaps been the most thankless of any piece of wartime machinery in the medical field. They have had unpleasant and invidious work to do, and in filling their quotas they have sometimes laid themselves open to all manner of suspicions from those who were ignorant of the facts, and also from those who are always inclined to attribute base motives to their fellow creatures, especially when those fellow creatures exercise a little brief authority.

No doubt some of the work that the Local Medical War Committees have done has been open to criticism, as all such improvised and emergency work must be, but it has had to meet a good many uninformed strictures and, of course, however perfect an answer the committees might have, they have been unable to disclose it. It is hoped to return to this subject in this column and to show how the committees have done a real job of work for which the nation and the profession should be grateful.

Full Calendar

A list of forthcoming committee meetings at headquarters, extending over the whole B.M.A. year, is a remarkable document. In this present October, for instance, there are eighteen such fixtures, and in December fourteen, and so it goes on through the year. This leaves out of account innumerable meetings of subcommittees, of joint committees, and of special conferences arranged at short notice to deal with new matters as they arise. The quarterly meetings of Council seem to be embedded in a mass of committee work, in which, of course, the policy and action of the Association are mainly shaped. It has to be remembered, too, that this committee work is voluntary, and, apart from the time actually spent at the meetings, entails for many who attend quite considerable travel.

The agendas of many of these meetings are formidable. Take the recent Public Health Committee: apart from something like thirty other items, it was arranged that during the same afternoon representatives of the Medical Women's Federation should meet it on the question of cost-of-living bonus, representatives of the Psychological Medicine Group on salaries in the mental health service, and representatives of the Association of Public Vaccinators concerning scales of remuneration and other matters.

Another Deputation

The Education Act, 1944, requires local education authorities to make arrangements for securing a free comprehensive medical service for school-children. The special committee appointed by the Council of the B.M.A. to consider the implications of the Act has decided to send a deputation to the Ministry of Education to urge: (1) that agreement should be reached on a national basis for the payment of medical personnel whose services are utilized under local schemes; and (2) that the Ministry should secure acceptance of the nationally agreed arrangements before giving approval to local schemes.

Correspondence

Labour Party's Health Policy

Sir,—The victory of the Labour Party at the General Election has brought a new factor into the negotiations for a National Health Service. For the first time a Government is in power which is pledged to provide a complete medical service for all sections of the community, and it is to be presumed that it will at least put the main lines of its policy into effect. Yet, judging by what is said, many doctors are far from adequately informed of what the Labour Party policy is. For instance, some believe that it is intended to abolish a patient's freedom to choose his own doctor, whereas the policy states: "Patients should be able to change their doctors if dissatisfied, and have a choice of an alternative." Consequently we would like to draw attention to the fact that the Labour policy for health has been published in a pamphlet, *National Service for Health*, which can be obtained from the Socialist Medical Association's offices, 35, Long Acre, London, W.C.2.

We recognize that at this stage no policy can be final and that much constructive work will be required before a perfect service can be obtained. We hope that all doctors who have the same aim as we have—namely, the provision of the best attention that science makes possible for all, irrespective of economic position, and the best possible conditions and full professional freedom for doctors and other health workers—will be able to co-operate together in achieving it.—We are, etc.,

Somerville Hastings,
President.
Horace Joules,
Vice-President.
D. Stark Murray,
Vice-President.

Socialist Medical Association, W.C.2.

For a State Service

Sir,—The catch-phrase of the moment in medical circles is that the war was fought to retain freedom but that a bureaucratic Government is now proposing to curtail it by instituting a State medical service. Medical men are now maintaining that freedom is essential to progress. Do these people forget the *laisser-faire* system of the last century and the gross abuses and injustices to which it gave rise? Man is essentially a selfish animal, and we live in a highly materialistic and competitive age. So to achieve the greatest good for the greatest number some form of control is essential due to man's psychology.

In medicine at the present time there are several opposing groups. The salaried doctors of the factories, the welfare centres, and some of the hospitals, and "free-lancers," the specialists and the general practitioners. Between these groups there is little or no co-operation. (In midwifery, the ante-natal work and the maternity work are done by different people.)

The poor man wishing to start in general practice has three alternatives. He can become a paid assistant at the beck and call of his employer, his initiative curtailed with no security of tenure; or he has either to "squat" and be able to keep himself for two years until his practice has grown; or he can borrow the money to buy a practice, thereby saddling himself with a load of debt for years to come. This man must then make enough money to keep himself and his family, to maintain a certain standard of life, to pay off his debts, and to save enough to be able to retire in his old age. As a result he has to treat his work as a business, not as a scientific profession, and hence we get over-visiting of private patients and scamping of panel patients. He has neither the time nor the money to enable him to keep up to date in his profession. By what hypocritical mental twist do we pretend that a medical training makes a man less interested in his own or his family's welfare? These must naturally come first.

As for the much-vaunted free choice of doctor—every doctor is limited by law to 2,000 panel patients, and by his own integrity to that number of private patients he can adequately serve.

It is only by facing economic and psychological facts and controlling them, not only in medicine but in national and international affairs, that there is any hope for man's spiritual and material progress. In medicine it is only by a State medical service that we can remedy the abuses, and bring about an efficient and fair service for all, both patient and doctor.—I am, etc.,

Chepstow. MARY R. ANDERSON.

Alternative to a Salaried Service

SIR,—Your correspondent signing himself "Twenty-five Years' Service" (*Supplement*, Sept. 15, p. 67) thinks that doctors would be willing to sacrifice a considerable portion of their present income in exchange for eight conditions of practice which he suggests would be offered by a full-time salaried service. I suggest that with adequate organization very much better conditions than he outlines can be attained with present methods. War conditions have, of course, made a temporary difference, but no longer obtain. Perhaps the best way to suggest what is desirable is to describe my own practice.

We are a partnership of four doctors practising in well-equipped central consulting rooms, so that virtually no practice is carried on in our own homes. We employ a resident caretaker, and two secretaries who relieve us of all clerical work. We have one half-day a week, every alternate half Sunday, a week-end a month, and four weeks' holiday in the year. If we are ill the partnership carries the burden, unless the illness is very prolonged. We believe that we give our patients a good service, and our income is adequate to ensure for our old age.

We look upon 60, and not 65, as a desirable age to retire. Of course, the absolute prerequisite for success is that all the partners should pull their weight, and should work for the good of the partnership. We also, in a mild way, develop our own specialty, so that we can be of great help to each other.

Surely practice under conditions such as these, which after all are very easily obtainable, is infinitely preferable to being a servant of the State.—I am, etc.,

RONALD S. COLDREY.

Medical Students and the Health Service Proposals

SIR,—May I, as a medical student, remark on the material headed "Medical Students and the Health Service Proposals" (*Supplement*, Sept. 15, p. 64). The British Medical Students' Association's statement is representative of less than 93% of British medical students. There is among the students I have consulted a growing antipathy towards State control of medicine. The opinion that answered the questionary has changed, as, I believe, has that which governed the replies of the qualified men and women. Not a few students are aware that the expansion of bureaucracy means a loss of individual freedom, of initiative, and responsibility; that any such limitation is a step towards the degradation of the race—evolution is posible only with the granting of greater power to the individual, this the essence of the democratic ideal.—I am, etc.,

Kirk Ella, Yorkshire. GEORGE H. BLAIR.

Health Centres and Scientific Method

SIR,—Whether or not health centres should provide more than a good general-practitioner service seems irrelevant to the point at issue, which is concerned with the relative merits of health centres and private surgeries as research stations for minor illness. Dr. A. Garvie (*Supplement*, Sept. 1, p. 57) insists on maintaining the discussion on an abstract plane and declines to contemplate vulgar realities. His statistical ideal will presumably have been attained when one doctor is allotted to an area and one area to a doctor, with obligatory assignment for all in that area. Anything less than this would introduce statistical disturbances. Obviously this, or anything approaching it, is neither possible nor desirable.

Dr. Garvie's argument holds good only if: (1) Doctors drained all, or most, practice in their immediate neighbourhood. Town practitioners will readily testify otherwise. (2) A health centre with, say, six doctors drained an area six times as large as that of each doctor practising individually. Actually, the health centre range is unlikely to be much, if at all, greater than that of one practice area, owing to density of population and overlapping of practices: but in that area health centre "drainage" would be comprehensive, not partial. Consequently, six doctors working together in an A zone about a health centre would surely produce data at least as reliable as six individual doctors working in their own areas. (3) G.P.s, in their individual surgeries, evinced any widespread propensity for research; comment is unnecessary. What is there to justify Dr. Garvie in believing that still greater isolation will remedy this: that even if 90% of patients were to attend they would be suitably sorted out?

Dr. Garvie's enthusiasm betrays him into the naive assumption that scientifically correct statistical conditions will, as a matter of course, produce the statistics. The truth is that these will not be forthcoming on any appreciable scale till favourable research conditions exist. These latter, comprising not merely the material but also the stimulus and the equipment, are much more likely to obtain under a system of aggregation than of isolation. As an academic exercise Dr. Garvie's reasoning may be unexceptionable, but it is an unsafe guide to reality. —I am, etc.,

London, N.W.10. LAURENCE PHILLIPS.

Those Class "B" Releases

SIR,—I write this letter in support of those of my colleagues who have drawn attention to the unenviable plight of Service medical officers, who, after enduring years of necessary drudgery in the cause of liberty, now find themselves with no concrete scheme for their release. We are almost certain to be retained after the release of equivalent age-service groups in other branches of the Service and must apparently remain indefinitely "shackled to our uniform," suffering all the disadvantages thereof. The proposed releases under Class B are pregnant with opportunities for exploitation of the scrupulous by the less scrupulous, of the non-influential by the influential. Furthermore, it is not inconceivable that Service doctors may eventually be offered release under this Class B providing they agree to enter forthwith the so-called State Medical Service, the implications thus entailed being only too painfully obvious.

It is respectfully submitted that the goal of the C.M.W.C. should be to aim at restricting releases under Class B to the most exceptional cases and accelerating the plan for the interchange of suitable civilian doctors with Service colleagues, at a pace that will ensure release of the latter, simultaneously with personnel of the same age-service group in other arms of the Service. In conclusion, I wish to express gratitude and thanks to the members of the C.M.W.C. for the efforts so far made on behalf of Service officers—efforts which have at least done something to dispel the melancholy idea that we are being "crucified on the cross of inaction."—I am, etc.,

"DE PROFUNDIS."

Leave from the E.M.S.

SIR,—Since October, 1943, having previously been rejected by the Army, I have worked as assistant physician at a large E.M.S. hospital. After two years with very little leave, I have just resigned and at the same time inquired how much leave with pay I might take before quitting the Service. The Hospital Sector Officer states in his reply that "you will only be entitled to 3 days' leave for the month of September, as the leave year terminates on August 31, and any arrears lapse at that time." To my mind this is iniquitous. No mention of any such date has been made before. The only conditions of employment in the E.M.S. which I have seen state that "an officer is subject to all the rules and entitled to all the privileges applying generally to temporary officers." In spite of this, it now appears that the doctor, unlike other civil servants, must have his leave before August 31 or lose it.

Lest I be accused of making trouble, I should prefer my name and that of the hospital not to be published.—I am, etc.,

"R.M.O."

British Medical Association

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

Scholarships

The Council of the British Medical Association is prepared to receive applications for research scholarships as follows: an Ernest Hart Memorial Scholarship of the value of £200 per annum, a Walter Dixon Scholarship of the value of £200 per annum, and four research scholarships, each of the value of £150 per annum. These scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State medicine) relating to the causation, prevention, or treatment of disease. Preference will be given, other things being equal, to members of the medical profession. The scholarships will be tenable for nine months in the first instance, commencing on Jan. 1, 1946. A scholar may be reappointed for not more than two additional terms of one year each. A scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces, or hold a junior appointment at a university medical school or hospital, provided the duties of such appointment do not interfere with his or her work as a scholar.

Conditions of Award: Applications

Applications for scholarships must be made not later than Saturday, Dec. 1, 1945, on the prescribed form, a copy of which will be supplied on application to the Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Short Service Commission.—Capt. P. B. Williams has retired on account of disability, and has been granted the honorary rank of Capt.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

War Subs. Majors H. B. Lee and R. J. C. Hamilton to be Majors.

War Subs. Capt. J. W. Brown to be Capt.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Major W. H. de B. Hubert has relinquished his commission on account of disability, and has been granted the honorary rank of Lieut.-Col.

War Subs. Capts. R. B. Crail and G. Gremson have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

War Subs. Capt. W. T. Agar has relinquished his commission, and has been granted the honorary rank of Capt.

To be Lieuts.: G. O. Airey, R. I. S. Bayliss, A. W. Bone, A. McK. Brass, G. C. Brentnall, F. S. W. Brimblecombe, R. A. D. Crawford, R. H. Cutforth, A. B. Dickie, T. G. Evans, G. R. Fearnley, O. C. Fung, R. E. Gibson, H. D. M. Gillies, G. E. L. Graham, J. S. Groves, M. W. MacD. Hadley, M. R. Hayes, J. M. Hill, J. P. Hopewell, A. Innes, W. T. C. Lumley, P. F. M. MacDonagh, A. S. McGowan, H. L. McMullen, D. MacVicar, E. Montuschi, E. M. Norman, A. C. E. Sandiland, J. H. Bartlett, J. McC. Caldwell, E. M. Clark, P. J. Cowin, H. G. Floyd, T. H. Nolan, C. S. Sergel, N. J. Willans, G. A. Williams, O. N. Ransford, W. L. Lister, H. G. Fitzmaurice, R. Nicklin, J. M. M. Jamieson, E. A. Beet, W. K. Connell, W. S. Haynes, A. R. Melville, C. B. Symes, D. M. Blomfield, G. Landmark, V. D. van Someron, F. O. Hersee, A. F. Tarlton, and J. P. Glasgow.

ROYAL AIR FORCE

ROYAL AIR FORCE VOLUNTEER RESERVE

To be Flying Officers (Emergency): F. M. Lanigan-O'Keeffe, T. McSweeney, and D. Shorten.

WOMEN'S FORCES

EMPLOYED WITH THE MEDICAL BRANCH OF THE R.A.F.

Flying Officer G. J. E. Jordan has relinquished her commission on appointment to the R.N.Z.A.F.

Flying Officer A. H. Renolds has resigned her commission, retaining her rank.

INDIAN MEDICAL SERVICE

Major-Gen. H. J. M. Cursetjee, C.S.I., D.S.O., K.H.S., has retired.

EMERGENCY COMMISSION

Capt. H. Flack to be Major.

COLONIAL MEDICAL SERVICE

The following appointment has been announced: S. D. Gun-Munro, M.B., B.S., District Medical Officer, Windward Islands, British West Indies.

MEDICAL WAR RELIEF FUND

SEVENTY-FIRST LIST

Amount previously acknowledged £58,268 0s. 5d. *and* £100 3½% *Conversion Stock, and* £40 3% *Defence Bonds.*

Individual Subscriptions

£21.—Mr. T. S. Allen, Hove.

£10 10s.—Dr. T. Brice Poole, Hove (3rd donation).

£10.—Dr. T. Norman, Newbury.

£7 7s.—Dr P. G. Levick, Bungay (4th donation).

£5 5s.—Dr. J. H. Wright, Sutton Coldfield (3rd donation).

£4 4s.—Major W. Happer, I.M.S. (26th donation).

£3 3s.—Dr. E. Cretney, Goole (4th donation); Major J. W. W. Jay, Paiforce (2nd donation); Drs. Silcock and Airey, Leicester (3rd donation).

£2 2s.—Capt. N. Bickford, R.A.M.C. (17th donation).

£1 11s. 6d.—Dr. T. B. Evans, Prestatyn (26th donation).

£10 10s.—Plymouth Division (amount already sent, £365 7s. 6d.); Mr. H. F. Vellacott (9th donation).

Local Medical and Panel Committees

£20 0s. 10d.—County of Dunbarton (19th donation).

£10.—Oxfordshire (4th donation).

Total—£58,379 19s. 9d., *and* £100 3½% *Conversion Stock, and* £40 3% *Defence Bonds.*

Sums for Books for Prisoners of War

Amount previously acknowledged £216 14s. 6d.

Cheques, payable to the Medical War Relief Fund, should be sent to the Hon. Treasurer of the Fund, British Medical Association House, Tavistock Square, London, W.C.1.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Revision course in anaesthetics, Oct. 8 to 20, demonstrations and/or lectures daily at various London hospitals; (2) Week-end course in rheumatic diseases, all day, Sat. and Sun., Oct. 20 and 21, at Rheumatic Unit, St. Stephen's Hospital, Fulham Road, S.W.; (3) Week-end course in diseases of the ear, nose, and throat, Sat. and Sun., Nov. 10 and 11, at Metropolitan Ear, Nose, and Throat Hospital; (4) Primary F.R.C.S. course, Nov., 1945, to Jan., 1946, three evenings weekly, 6 p.m. to 8.15 p.m.; (5) Week-end course in rheumatic diseases at Royal Bath Hospital, Harrogate, all day, Sat. and Sun., Nov. 3 and 4. Full particulars of courses from the Fellowship of Medicine, 1, Wimpole Street, W.

Demonstrations and discussions of clinical cases will be given at the Royal National Throat, Nose, and Ear Hospital (Gray's Inn Road, W.C.) on Fridays at 4 p.m. from Dec. 14, 1945, to April 19, 1946, both dates inclusive. The demonstrations are open, without fee, to all medical practitioners, who will be invited to examine the cases and to take part in the discussions.

WEEKLY POSTGRADUATE DIARY

GLASGOW UNIVERSITY: DEPARTMENT OF OPHTHALMOLOGY.—*Wed.*, 8 p.m., Dr. I. C. Michaelson: Ophthalmology in the New World and in the Old.

DIARY OF SOCIETIES AND LECTURES

ROYAL COLLEGE OF PHYSICIANS OF LONDON, Pall Mall East, S.W.—*Thurs.*, 3 p.m., Harveian Oration by Dr. John Parkinson: Rheumatic Fever and Heart Disease.

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—*Mon.*, *Wed.*, and *Thurs.*, 2.30 p.m., Prof. John Beattie, Kidney Function; 5 p.m., Prof. A. J. E. Cave, Topography of the Thorax and the Thoracic Viscera. *Mon.*, 3.45 p.m., Prof. R. A. Willis, Metastatic Growths clinically simulating Primary Ones. *Wed.* and *Fri.*, 3.45 p.m., Prof. Willis, Causation of Tumours.

ROYAL SOCIETY OF MEDICINE.—*Tues.*, 4.15 p.m., Section of Pathology; 5 p.m., General meeting of Fellows. *Thurs.*, 5 p.m., Section of Dermatology. *Fri.*, 6 p.m., Section of Radiology; 8 p.m., Section of Obstetrics and Gynaecology.

ASSOCIATION OF INDUSTRIAL MEDICAL OFFICERS: SCOTTISH GROUP.—At Institute of Hygiene, University of Glasgow, *Wed.*, 3.15 p.m. Annual general meeting.

ROYAL INSTITUTE OF PUBLIC HEALTH AND HYGIENE, 28, Portland Place, W.—*Wed.*, 3.30 p.m., Mr. F. D. Saner, Cancer of the Breast—Its Diagnosis and Treatment.

ROYAL SANITARY INSTITUTE, 90, Buckingham Palace Road, S.W.—*Wed.*, 2.30 p.m., Lieut.-Col. M. H. Webster, R.A.M.C.: Uses of D.D.T. in the Field. To be illustrated by a sound film.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 26, Portland Place, W.—*Thurs.*, 8 p.m. Presidential address by Dr. C. M. Wenyon, F.R.S.: Tropical Medicine in War and Peace.

B.M.A.: Branch and Division Meetings to be Held

SWANSEA DIVISION.—At Mackworth Hotel, Swansea, Thursday, Oct. 25, 7.30 p.m. Annual dinner.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

EASTCOTT.—On Sept. 25, 1945, at St. Mary's Hospital, London, W.2, to Doreen, wife of Surg. Lieut. H. H. G. Eastcott, R.N.V.R., a second daughter.

CUNNINGHAM.—On Sept. 28, 1945, at Benslow Nursing Home, Hitchin, to Gwen, wife of Dr. A. A. Cunningham, a son.

MARRIAGES

KNOWLES—GREENSLADE.—On Aug. 24, 1945, at Theydon Bois, Essex, Capt. Gordon S. Knowles, R.A.M.C., of London, to Moira H. Greenslade, of Theydon Bois.

ROBERTSON—CYRLAS-WILLIAMS.—On Aug. 31, 1945, at Poona, India, D. N. Struan Robertson, Capt., R.A.M.C., to Ruth Cyrlas-Williams (*née* Colyer), Lieut., R.A.M.C.

DEATHS

McDOUGALL.—On Sept. 29, 1945, at Wallington, William Stewart McDougall, M.B.Edin.

PUDDICOMBE.—On Sept. 29, 1945, suddenly, at home, Thomas Phare, D.S.O., M.B., B.S., D.P.H.(Lond.), M.R.C.S., L.R.C.P., of Combe House, Torrington, dearly beloved husband of Violet.

ROSENSTONE.—On Sept. 14, 1945, in Manchester, suddenly, Abram Rosenstone, M.B., Ch.B., aged 45 years.

Among the recent engagements of the Secretary of the B.M.A. were addresses to the Annual Conference of the Scottish Association of Insurance Committees at Edinburgh on Sept. 28, the Oxford Rotary Club on Oct. 1, the Doncaster Women's Luncheon Club on Oct. 9, and the Royal Medical Society of Edinburgh on Oct. 12. His future engagements include addressing the West Sussex Division at Worthing on Oct. 24, the Birmingham University Pre-Clinical and Medical Society and also the Birmingham and Midland Institute on Oct. 29.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

HIS MAJESTY'S COLONIAL SERVICE. The Colonial Medical Service. Vacancies for MEDICAL OFFICERS. The maintenance of an efficient COLONIAL MEDICAL SERVICE constitutes a vital part of the national war effort, and it is most important that the Service should be assured of an adequate supply of doctors. The Secretary of State for the Colonies therefore invites applications from doctors possessing a medical qualification registrable in the United Kingdom who are British subjects and who are under 35 years of age. Medical officers are appointed in the first instance for general service, but there are ample opportunities for work in special branches of medicine and surgery, in public health, and in medical research. The normal salary scale is from £600 to between £1,000 to £1,120. There are large numbers of super-scale posts to which promotion is made on merit and which carry higher salaries. Government quarters, in many cases free of rent, and first-class passages to and from the Colonies are provided, and an adequate pension scheme is in force. Selected candidates are normally required to attend a course of instruction in Tropical Medicine and Hygiene, either before or after proceeding overseas or during their first period of leave. Further particulars, including the regulation governing admission to the Colonial Medical Service, may be obtained from the *Director of Recruitment (Colonial Service)*, 2, Park Street, London, W.1.

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

GLOUCESTERSHIRE JOINT BOARD FOR TUBERCULOSIS. Standish House Sanatorium, Stonehouse, Glos. (250 beds with orthopaedic block). TEMPORARY ASSISTANT MEDICAL OFFICER (B1) AND ASSISTANT TUBERCULOSIS OFFICER.—With the approval of the Minister of Health the Board invite applications from registered male practitioners for the above joint appointment. In addition to his duties at the Sanatorium the successful candidate will be required to undertake duties at dispensaries, etc. The commencing salary will be at the rate of £450 p.a. plus bonus, and will rise by annual increments of £25 to £600 per annum plus bonus, with emoluments of a total value of £150, and travelling and subsistence allowances in accordance with the Board's scale will be paid. Candidates should have held a resident hospital appointment and an appointment in some institution recognized for the treatment of tuberculosis, and suitably qualified R practitioners holding B2 appointments are inivted to apply. R practitioners now holding B1 appointments and rejected by the R A.M.C. may also apply. The appointment is subject to the approval of the Minister of Health and will be determined by three months' notice in writing on either side, and the person appointed must satisfactorily pass a medical examination. Applications should be addressed to the Clerk of the Joint Board for Tuberculosis, Shire Hall, Gloucester, and should reach him not later than October 26.—Guy H. Davis, Clerk of the Joint Board for Tuberculosis.

MEDICAL PRACTITIONERS' UNION—The Council of the Medical Practitioners' Union invites applications from registered medical practitioners, including those serving with H.M. Forces, for the position of DEPUTY SECRETARY. The salary will be at the rate of £1,250 a year, rising by annual increments of £50 to £1,750. The successful candidate, who will be expected to take up office on April 1, 1946, or on demobilization, will work under the present General Secretary. Applications with full particulars of qualifications, experience, age, and the names and addresses of three persons to whom reference may be made, should be sent to the General Secretary, 55-56, Russell Square, London, W.C.1, on or before February 13, 1946. —Alfred Welply, General Secretary.

BOROUGH OF SWINDON. ASSISTANT MEDICAL OFFICER OF HEALTH and ASSISTANT SCHOOL MEDICAL OFFICER (Temporary). —Applications are invited from duly qualified medical practitioners for the whole-time temporary appointment of Assistant Medical Officer for Maternity and Child Welfare and School Medical work. Candidates already in whole-time Public Health employment by local authorities will not be eligible. The consent of the Minister of Health has been obtained to the making of the appointment. Salary scale £500 to £700 by £25 per annum increments, plus war bonus; the commencing salary to be fixed according to qualifications and experience. The appointment will be terminable by one month's notice on either side. Forms of application and conditions of appointment may be obtained on application to the Medical Officer of Health, Civic Offices, Swindon. Applications giving full information as to liability for service in the armed Forces and accompanied by copies of three recent testimonials or the names of three references, to be forwarded in an envelope endorsed "Assistant Medical Officer of Health," to reach me not later than the first post, Friday, October 19, 1945.—D. Murray John, Town Clerk, Civic Offices, Swindon.

BRITISH POSTGRADUATE MEDICAL SCHOOL (University of London).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), the post becoming vacant on Nov. 20, 1945. This includes practitioners liable to service under the National Service Acts, who have not yet completed three months since date of qualification. The appointment is for six months. The salary is at the rate of £105 per annum, plus full residential emoluments.—Apply, The Dean, British Postgraduate Medical School, Ducane Road, W.12, before October 20, 1945

CITY OF PLYMOUTH, Didworthy Sanatorium, South Brent, Devon (140 beds). TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH. —Applications are invited from registered medical practitioners, male and female, for the appointment of temporary Assistant Medical Officer of Health for Didworthy Sanatorium, South Brent. The salary scale is £350 rising by £25 annually to £550 per annum, plus full residential emoluments and a war bonus. Previous service on this salary scale, under another local authority will be reckoned in calculating the appropriate salary of the officer appointed. All fees received by the Officer must be refunded to the Council. Preference will be given to candidates with some experience in the treatment of Pulmonary Tuberculosis. The person appointed will be required to work under the direct supervision of the Medical Superintendent. The appointment is subject to the provisions of the Local Government Superannuation Act, 1937, and terminable by three months' notice on either side at any time, and the successful candidate will be required to pass a medical examination. Applications should be sent to the undersigned as soon as possible. The consent of the Minister of Health has been obtained to the making of this appointment, but candidates already in whole-time public health employment by the Local Authorities will not be eligible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF BATH. St. Martin's Hospital (800 beds). —Applications are invited from registered medical practitioners for appointment as RESIDENT MEDICAL OFFICER (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will not exceed one year, and if held by a practitioner who is liable under the Acts, will be for a period of six months. Salary at the rate of £200 per annum with board residence and laundry. About half the beds are in the E.M.S. Hospital, and there is excellent scope for medical and surgical work. The person appointed will be expected to undertake general surgical duties and administer anaesthetics. The appointment would be suitable for either a man or woman. Applications to the Medical Officer of Health, Sawclose, Bath.

CITY AND COUNTY OF BRISTOL. Department of Public Health. ASSISTANT RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male or female, for the immediate appointment of Assistant Resident Medical Officer (B2) at Ham Green Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be held for a period of one year. Salary £200 per annum, plus full residential emoluments. Application forms may be obtained from the undersigned, to whom they must be returned, accompanied by copies of not more than three recent testimonials, forthwith.—R. H. Parry, Medical Officer of Health, Kenwith Lodge, Westbury Park, Bristol, 6.

CITY OF BIRMINGHAM. Mental Deficiency Act Committee, Monyhull Colony. RESIDENT ASSISTANT MEDICAL OFFICER (B1).—Applications are invited for the post of Resident Assistant Medical Officer (lady or gentleman) at the above Colony. Candidates should have held house appointments in the general hospital. R and W practitioners holding B2 appointments may apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The scale of salary is £350, rising by one annual increment of £50 and two of £25 to £450 per annum, plus war bonus, with full residential emoluments valued at £125 per annum, and a further £50 per annum is payable for a recognized postgraduate qualification in psychological medicine. The Colony includes a residential special school and excellent opportunities for learning the psychology of mental deficiency. After a period of probation and the passing of a satisfactory medical examination the appointment will be subject to the provisions of the Asylums Officers' Superannuation Act, 1909, as modified by the Asylums and Certified Institutions (Officers' Pensions) Act, 1918. All fees and emoluments received other than the above must be repaid to the City Council. Applications should be addressed to the undersigned so as to be received not later than December 31, 1945, the envelope to be endorsed "Resident Assistant Medical Officer." Canvassing either directly or indirectly will disqualify.—Dr. C. J. C. Earl, Medical Superintendent, Monyhull Colony, King's Heath, Birmingham, 14.

CITY OF MANCHESTER. Booth Hall Central Hospital for Children (760 beds). TEMPORARY RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the appointment of Temporary Resident Surgical Officer (B1) which will become vacant on December 21, 1945, at the above-mentioned hospital. Although the vacancy is on the permanent assignment of staff, the appointment will be temporary for the time being, and subsequently the officer appointed will be eligible to apply for the permanent post. Candidates must have practical surgical experience and, preferably, hold a high surgical qualification. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Basic salary in accordance with the Manchester Corporation conditions of service, commences at £475 per annum, with full residential emoluments in addition, but annual increments of £25 up to a maximum basic salary of £550 may be granted at the discretion of the Council. The salary is subject to a temporary cost-of-living wages addition. The commencing cash remuneration, at present, is £505 for a male officer, and £499 2s. 6d. for a female officer. Forms of application can be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2, and all applications must be received by him not later than November 3, 1945. (Full details of the post can be obtained from the Medical Superintendent of Booth Hall Hospital, Blackley, Manchester, 9.) Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF PLYMOUTH. Mount Gold Orthopaedic Hospital (120 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT RESIDENT SURGICAL OFFICER (B2) at Mount Gold Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be renewable for a further period of six months, terminable by one month's notice on either side at any time. Salary is at the rate of £250 per annum, plus war bonus, with full residential emoluments. All other fees received by the Officer must be refunded to the Council. Married quarters are not provided. Preference will be given to applicants who have had some experience of orthopaedic and fracture work. The duties are in the orthopaedic and E.M.S. sections of the hospital. Applications should be sent to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE. County and Emergency Hospital, Otley (296 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of a RESIDENT MEDICAL OFFICER (B2), vacant now, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it will be for a period not exceeding one year. The salary is at the rate of £200 per annum, with full residential emoluments. Applications should be submitted to the Deputy Medical Officer, County Hall, Wakefield.—Bernard Kenyon, Clerk of the County Council, County Hall, Wakefield.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 9

COUNTY BOROUGH OF MIDDLESBROUGH. TEMPORARY ASSISTANT MEDICAL OFFICER for Maternity and Child Welfare.—Applications are invited from registered medical practitioners who have had previous experience in ante-natal work, midwifery, and diseases of children, for the above appointment. The possession of the Diploma in Public Health, or its equivalent, would be considered an additional qualification for the office. The consent of the Ministry of Health has been obtained to the filling of this vacancy. Candidates already holding whole-time public health appointments will not be considered unless consent to apply has been obtained from the Ministry of Health. The officer appointed would be required to attend ante-natal and infant welfare clinics, and also to undertake certain administrative duties in the maternity and child welfare department under the general direction of the Medical Officer of Health. Although the duties would mainly be in the maternity and child welfare department, the successful candidate would be expected to undertake such general duties in the public health department as may be required from time to time by the Medical Officer of Health. The commencing salary will be at the rate of £700 per annum, rising, subject to satisfactory service, by annual increments of £50 to a maximum of £850. The successful candidate will be required to pass a medical examination, and to reside within the County Borough of Middlesbrough. The position is terminable by three months notice on either side. Applications to be sent to the Medical Officer of Health, Municipal Buildings, Middlesbrough, not later than Monday, October 29, 1945.—Preston Kitchen, Town Clerk, Municipal Buildings, Middlesbrough.

CITY OF LEEDS. Public Health Department. Killingbeck Hospital for Infectious Diseases.—Applications are invited from registered medical practitioners for the post of ASSISTANT MEDICAL OFFICER (B2) now vacant. The salary is at the rate of £300 per annum, plus a cost-of-living bonus, and full residential emoluments. The appointment is for six months. R practitioners holding A posts may apply.

St. Mary's Infirmary.—Applications are invited from registered medical practitioners, male, for the post of RESIDENT MEDICAL OFFICER (B2) for the above hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part I Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid into the City funds. R practitioners who now hold A posts may apply, when the appointment will be limited to six months; otherwise twelve months.

Applications for each post endorsed "A.M.O." and "R.M.O." respectively, to be forwarded to J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

COUNTY BOROUGH OF SOUTHAMPTON. Borough General Hospital. PART-TIME TEMPORARY CONSULTING SURGEON.—Applications are invited from registered medical practitioners, with special surgical qualifications, for the above appointment. The salary offered will be £350 per annum: Sessions, three per week, plus special visits in case of emergency. Form of application, giving further particulars, can be obtained from the undersigned, and should be returned immediately.—H. C. Maurice Williams, Medical Officer of Health, Civic Centre, Southampton.

COUNTY COUNCIL OF THE WEST RIDING OF YORKSHIRE, Staincliffe Council Hospital, Dewsbury (349 beds).—Applications are invited from registered medical practitioners, male only, for the appointment of RESIDENT MEDICAL OFFICER (A). Salary is at the rate of £120 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months, otherwise not exceeding one year.—Bernard Kenyon, Clerk of the County Council, County Hall, Wakefield.

HEREFORD COUNTY AND CITY MENTAL HOSPITAL. TEMPORARY ASSISTANT MEDICAL OFFICER (B1) required. British (female). Salary £10 10s. per week, all found. Suitably qualified W practitioners holding B1 or B2 appointments are invited to apply. Previous experience in psychiatry not essential. Applications to be forwarded to the Medical Superintendent, County and City Mental Hospital, Burghill, Hereford.

IPSWICH COUNTY BOROUGH COUNCIL. Borough General Hospital (normal beds 252).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had surgical experience. R practitioners holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £500 per annum, with full residential emoluments, and the appointment is subject to one month's notice on either side. Applications should be sent at once to the Medical Officer of Health, Elm Street, Ipswich.—A. Moffat, Town Clerk, Town Hall, Ipswich.

CITY OF LIVERPOOL. TEMPORARY JUNIOR PATHOLOGIST.—Applications are invited for the appointment of a full-time temporary Junior Medical Pathologist at the Alder Hey Emergency Hospital (1,240 beds). The salary is at the rate of £650 per annum (non-resident), together with a cost-of-living bonus, at the present time approximately £60 p.a. Any fees received in connexion with the appointment to be handed over to the City Council. Candidates must be fully qualified and registered, must have specialized in pathology and have had experience in a recognized pathological department. The officer appointed will be responsible for conducting the work of the laboratory under the general supervision of the pathologist of the Southern Group of Hospitals and will be required to co-operate generally with the medical staffs so far as this particular service is concerned. The appointment will be made in accordance with the standing orders of the City Council and will be determinable by three months' on either side. Applications, stating whether R practitioner and whether liable for military service should be endorsed "Junior Medical Pathologist" and sent to the undersigned not later than November 10, 1945. The consent of the Minister of Health has been obtained to advertise for and make this appointment. W. H. Baines, Town Clerk, Municipal Buildings, Dale Street, Liverpool, 2.

CITY OF PLYMOUTH. City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT MEDICAL OFFICER (A) at the City General Hospital (450 beds). The appointment will be for a period of six months and terminable by one month's notice on either side at any time. Salary will be at the rate of £250 per annum, plus war bonus, and full residential emoluments. All fees received by the officer must be refunded to the Council. The duties of the post will be chiefly on the medical side of the hospital and further details may be obtained from the Medical Superintendent. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF SHEFFIELD. City General Hospital. SENIOR ASSISTANT MEDICAL OFFICER OBSTETRICAL (B1).—Applications are invited for the above appointment of Senior Assistant Medical Officer in the Obstetrical Department of the above hospital, which deals with approximately 2,000 confinements per annum. Applicants should have had postgraduate obstetrical experience. Suitably qualified R practitioners holding B2 appointments are invited to apply. Holders of B1 posts cannot be considered unless unfit for military service. Salary £350 per annum rising by £25 to £550, plus bonus and residential emoluments. Applications should be sent to the Medical Superintendent, City General Hospital, Sheffield, 5, as soon as possible.

COUNTY BOROUGH OF IPSWICH. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH.—Applications are invited from registered medical practitioners for the above appointment. The possession of the Diploma in Public Health or an equivalent qualification will be an advantage. The salary scale is £600 p.a. rising by annual increments of £25 to £700, plus war bonus, and the successful candidate will devote the whole of his or her time to the duties of the office, under the direction of the Medical Officer of Health. The approval of the Minister of Health has been obtained for the appointment, and candidates should submit with their applications full information as to their liability for military service, medical fitness, and position as regards deferment. Applications, endorsed "Assistant Medical Officer of Health," should be forwarded to the Medical Officer of Health, Elm Street, Ipswich, at once.—A. Moffat, Town Clerk, Town Hall, Ipswich.

HEREFORDSHIRE COUNTY COUNCIL.—Applications are invited for a TEMPORARY WHOLE-TIME ASSISTANT MEDICAL OFFICER in the County Health Department. The duties will primarily consist of school medical examinations and maternity and child welfare work. Salary £600 by £25 to £700 per annum, plus wartime bonus, together with travelling allowance. Applicants (who should not be in a whole-time public health appointment) should apply at once to the County Medical Officer, County Offices, Hereford.

KENT COUNTY COUNCIL. County Hospital, Pembury (750 beds). HOUSE SURGEON (A).—Applications are invited from suitably registered medical practitioners, male, for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months; otherwise it will be for a period not exceeding one year. The salary is £200 a year plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged, and the successful candidate will be required to pass a medical examination. Applications should state the names and addresses of two responsible presons to whom reference may be made as to professional ability, and should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by October 23, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

MIDDLESEX COUNTY COUNCIL.—JUNIOR ASSISTANT MEDICAL OFFICER (B2, resident) (male) required for medical duties at HILLINGDON COUNTY HOSPITAL, Nr. Uxbridge, Mx. Applications invited from registered medical practitioners including R practitioners who now hold A posts. Salary £250 p.a. plus war bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties such as Council may require under supervision of medical director. Appointment, subject to medical exam., and one month's notice, is for six months, with possibility of extension to twelve months (except R practitioners). Post vacant early November, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—CASUALTY OFFICER (B2, resident) (male) required at HILLINGDON COUNTY HOSPITAL, Nr. Uxbridge, Mx. Applications invited from registered medical practitioners, who have held house appointments and had good all-round experience (including R practitioners who now hold A posts). Salary £350 p.a., plus war bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties under medical director will include dealing with casualties and admissions to hospital and such other duties as may be required. Appointment, subject to medical exam. and one month's notice, is for six months, with possibility of extension to twelve months (except in case of R practitioners). Post vacant early November, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—CASUALTY OFFICER (B2, resident) required at CENTRAL MIDDLESEX COUNTY HOSPITAL, Park Royal, N.W.10. Applications invited from registered medical practitioners, who have held house appointments and had good all-round experience (including R and W practitioners now holding A posts). Salary £350 p.a., plus war bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties such as Council may direct under supervision of medical director. Appointment, subject to medical exam. and one month's notice, is for six months, with possibility of extension to 12 months (except in case of R practitioners). Post vacant December 1, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL. ASSISTANT MEDICAL OFFICER (res. or non-res. B1) required at CLARE HALL COUNTY HOSPITAL, South Mimms, Middlesex (540 beds for tuberculosis).—Applications invited from registered medical practitioners (including R and W practitioners holding B2 posts) who have held house appointments and had experience in diagnosis and treatment of pulmonary tuberculosis. R practitioners holding B1 posts ineligible unless rejected by R.A.M.C. Salary £400 by £50 to £500 p.a. Board, lodging and laundry or, if non-res., £100 p.a. cash allowance in lieu of residential emoluments. Additional cost of living bonus (now £60 p.a.), proportion only in cash if resident. Appointment in first instance for one year, medical examination. Whole-time duties, such as Council may require, under general supervision of Medical Director. Post vacant end of October, 1945. Application to The Clerk of the County Council, "Z." Application forms not provided. Closing date October 20, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL. HOUSE SURGEON (Res., A) required at ASHFORD COUNTY HOSPITAL, London Road, Ashford, Middlesex, for general surgical wards.—Applications invited from registered medical practitioners (men only) including those within three months of qualification who are liable to service under National Service Acts. Salary £120 p.a. plus cost of living bonus (now £60 p.a., proportion only paid in cash), board, lodging and laundry. Whole-time duties, such as Council may require, under supervision of Medical Director. Six months appointment. Post vacant November 1, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date, October 20, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

KENT COUNTY OPHTHALMIC AND AURAL HOSPITAL, Maidstone (158 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (B1) to the Ear, Nose, and Throat Department, vacant November 19, 1945. Applicants should have held house appointments and had experience in this speciality. The hospital is fully recognized by the Examining Board for the D.L.O. Salary is at the rate of £350 p.a., with full residential emoluments. Suitably qualified R and W practitioners holding B2 appointments, also R practitioners holding B1 and rejected by the R.A.M.C. may apply. Applications should be sent not later than October 22 to John W. Strickland, F.H.A., Secretary.

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 9

LONDON COUNTY COUNCIL.—Applications are invited for appointment to two positions of full-time JUNIOR ASSISTANT PHYSICIST (temporary wartime appointment) in the Council's hospitals service. The duties will be mainly in connexion with *x*-ray and radium work at Hammersmith Hospital, Ducane Road, W.12, and Lambeth Hospital, Brook Drive, S.E.11, but the persons appointed will be required to undertake any other duties which may be allotted to them from time to time. Salary £350 a year rising by annual increments of £25 to £400 a year (together with cost-of-living addition, £60 a year for men or £48 a year for women). There are no emoluments. Application forms giving full particulars obtainable (stamped addressed foolscap envelope necessary) for Medical Officer of Health (S.D.6.), London County Council, County Hall, S.E.1, are returnable by October 19, 1945.

MERIONETH COUNTY COUNCIL. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited for the above post from registered male or female medical practitioners. The appointment will be for a period of twelve months and will be determinable by one calendar month's notice on either side. The salary is at the rate of £500 per annum together with cost-of-living bonus and travelling and subsistence allowances according to the Council's scale. The successful applicant will be required to reside at Dolgelley and to carry out duties in connexion with Public Health and School Medical Service. The successful applicant will also be required to pass a medical examination by the County Medical Officer of Health. Further particulars may be obtained from the County Medical Officer of Health, County Offices, Dolgelley. Applications should reach the undersigned not later than Saturday, October 20, 1945.—Hugh J. Owen, Clerk of the County Council, County Offices, Dolgelley.

MONMOUTHSHIRE COUNTY COUNCIL. The County Hospital, Panteg, Griffithstown ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, female, for the appointment of Assistant Resident Medical Officer at the County Hospital, Panteg (B2), including W practitioners who now hold A posts. The appointment will be for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments. Applications to be forwarded to the Medical Superintendent at the hospital as soon as possible.—D. Rocyn Jones, County Medical Officer, County Hall, Newport, Mon.

STAFFORDSHIRE COUNTY COUNCIL. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited from medical men and women for the above-mentioned temporary post, and preference will be given to those who have held residential hospital appointments and who have the Diploma of Public Health. Officers already occupying full-time public health appointments with local authorities are not eligible to apply, and, in any case, intending candidates must ascertain if they are free to take up this class of employment. The candidate appointed will work under the direction of the County Medical Officer, and the duties will include school medical and maternity and child welfare work. The salary will be at the rate of £600 per agnum, rising by annual increments of £50, to £800 per annum, plus war bonus. The candidate appointed will be required to provide a motor car and will receive allowances according to the County Council scales. The appointment will be subject to three calendar months notice in writing on either side. Forms of application may be obtained from the undersigned, and should be returned, accompanied by copies of not more than three testimonials, by the first post on October 27, 1945.—T. H. Evans, Clerk of the County Council, County Buildings, Stafford.

SURREY COUNTY COUNCIL. Public Health Department. St. Luke's Hospital, Guildford (500 beds).—Applications are invited from registered medical practitioners for the appointment of TEMPORARY ASSISTANT SURGEON (B1). Candidates must possess a higher surgical qualification, and must have had considerable experience of general surgery. Suitably qualified R and W practitioners now holding B2 posts are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary is at the rate of £800 p.a., plus full residential emoluments or £125 p.a. in lieu. The appointment is temporary in the first instance, and is subject to one month's notice on either side, and any Local Government Superannuation rights will be preserved. At a later date the permanent appointment will be readvertised. Applications to the County Medical Officer, Kingston-upon-Thames, by October 24, 1945.

SURREY COUNTY COUNCIL, Epsom County Hospital, Dorking Road, Epsom (350 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT MEDICAL OFFICER (B2) including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to 6 months, otherwise it will not exceed 1 year. Applicants must have held house appointments with general experience and should be capable of administering anaesthetics. Salary at the rate of £250 p.a. plus full residential emoluments and war bonus.—Apply to the Medical Superintendent at the hospital by October 20, 1945.

MIDDLESEX COUNTY COUNCIL.—ASSISTANT MEDICAL OFFICER (B1), male, British, temporary, unestablished, required at SPRINGFIELD MENTAL HOSPITAL, London, S.W.17. Salary £400 p.a., plus current war bonus £25 p.a. and full residential emoluments. Previous mental experience not essential. Suitably qualified R practitioners holding B2 appointments, also those now holding B1 who have been rejected by R.A.M.C., may apply. Applications to Medical Superintendent.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

ADDENBROOKE'S HOSPITAL, Cambridge. House Officer Appointments (A)—Applications are invited from registered medical practitioners, male and female, for the following appointments:

HOUSE SURGEON, to become vacant on December 1, 1945,

HOUSE PHYSICIAN, to become vacant on November 22, 1945,

CASUALTY OFFICER AND SUPERNUMERARY HOUSE OFFICER, to become vacant on Decembr 1, 1945,

including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months only, which is the normal period of appointment. Salary is at the rate of £130 per annum, with full residential emoluments.

House Officer Appointments (B2).—Applications are invited from registered medical practitioners, male and female, for the following appointments:

HOUSE SURGEON to the Special Departments (Gynaecological, Obstetric, and Ophthalmic), to become vacant on December 1, 1945,

RESIDENT MEDICAL OFFICER to the Radiotherapeutic Department, now vacant,

including R and W practitioners who now hold A posts. If held by an R or W practitioner the appointment will be limited to six months, which is the normal period of appointment. The salary is at the rate of £200 per annum, with full residential emoluments.

Applications should be sent to the undersigned not later than Wednesday, October 24, 1945.—J A. Beardsall, Secretary-Superintendent.

AYRSHIRE CENTRAL HOSPITAL, Irvine. RESIDENT ANAESTHETIST (B1).—Applications are invited from female medical practitioners for the above appointment at the maternity section of the above hospital (84 beds). Suitable qualified W practitioners holding B2 or B1 appointments may apply, but they must have obtained the consent of the Scottish Central Medical War Committee to their application. The person appointed will work under the general supervision of the county obstetrician. Preference will be given to a candidate holding a diploma in anaesthetics. The salary is £400 by £25 to £600, with war bonus and full residential emoluments. The post is within the authorized establishment but the initial appointment will be on a temporary basis subject to review later. Applications stating former general experience and experience in anaesthetics should be made not later than November 3 to the County Clerk, County Buildings, Ayr.

ALTRINCHAM GENERAL HOSPITAL, near Manchester (100 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A). Salary at the rate of £150 p.a., with full residential emoluments. The appointment will be for a period of six months. If held by an R practitioner the appointment will be limited to six months. The appointment is recognized for D.A. The commencing salary will be at the rate of £225 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately.—Frank Jennings, House Governor and Secretary.

WORCESTER ROYAL INFIRMARY.—Applications are invited for the position of HOUSE SURGEON (A). The salary will be at the rate of £120 a year, with full residential emoluments. Practitioners within three months of qualification and liable under National Service Acts may apply, when the appointment will be for six months Applications should be addressed to the undersigned.—Harold Wigg, Acting Supt.-Secretary.

THE Medical Defence Union

Established 1885 *MUSeum 1337*

Annual Subscription £1 **MEMBERSHIP EXCEEDS 27,500** *Assets exceed £150,000*

No entrance fee payable by those joining within twelve months of registration.

Full particulars from the Secretary (Dr. Robert Forbes), The Medical Defence Union, Ltd., 49, Bedford Sq., London, W.C.1

IMPORTANT—All applicants should read the notice about qualifications required, etc., printed at the top of page 9

ROYAL ALBERT EDWARD INFIRMARY AND DISPENSARY, Wigan (189 beds).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), to become vacant on November 1, 1945. Applicants should have held house appointments and had surgical experience. Preference will be given to candidates holding Diploma of F.R.C.S. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £300 per annum.

Applications are also invited from registered medical practitioners for the appointment of a HOUSE SURGEON (B2), male, vacant now. Salary £175 per annum, with full residential emoluments. R practitioners who now hold A posts may apply, when appointment will be limited to six months, otherwise it may be extended for a further period.

Applications for each post should be sent to the undersigned as soon as possible.—A. Stanley Brunt, General Superintendent and Secretary.

ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL, Southampton (255 beds). CASUALTY OFFICER and HOUSE SURGEON to E.N.T. Department (A).—Applications are invited from registered medical practitioners, male and female, for the appointment of a Casualty Officer and House Surgeon to the E.N.T. Department (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately.—Frank Jennings, House Governor and Secretary.

ROYAL UNITED HOSPITAL, Bath.—ORTHOPAEDIC and FRACTURE HOUSE SURGEON (B1).—Applications are invited for the above appointment from registered medical practitioners, including R and W practitioners who now hold B2 posts. Applications from R and W practitioners who now hold B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary £250 per annum, with board residence and laundry. Applications to be addressed at once to the undersigned.—J. Lawrence Mears, Secretary-Superintendent.

ROYAL SOUTH HANTS AND SOUTHAMPTON HOSPITAL (255 beds). HOUSE SURGEON (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Surgeon (B2), including R and W practitioners who now hold A posts. The appointment will be for a period of six months. The salary is £175 per annum, with full residential emoluments. Applications should be sent to the undersigned immediately. Frank Jennings, House Governor and Secretary

---

ROFFEY PARK REHABILITATION CENTRE, Horsham (106 beds).—Applications are invited for the post of MEDICAL OFFICER (B1). Salary £500 per annum with small unfurnished house. Preference given to one with psychiatric experience. Suitably qualified R practitioners holding B2 appointments, also those holding B1 and rejected by R.A.M.C., may apply. Applications should be sent to the Medical Director.

ROYAL BERKSHIRE HOSPITAL, Reading.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT MEDICAL OFFICER (Blagrave Branch Hospital) AND ASSISTANT to the Pathologist (A) (Joint Post), vacant October 23. Salary is at the rate of £150 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts, may apply, when the appointment will be for a period of six ments. Applications should be sent immediately to H E. Ryan, Secretary and House Governor.

SOUTH LONDON HOSPITAL FOR WOMEN, Clapham Common, S.W.4. MEDICAL REGISTRAR (B1).—Applications are invited from registered female medical practitioners for the appointment of WHOLE-TIME MEDICAL REGISTRAR. Practitioners holding B2 appointments and Service candidates are invited to apply. Preference will be given to applicants holding the Diploma of M.R.C.P. Salary according to qualifications and experience, with a minimum of £250. Applications to be sent to the Secretary on or before February 13, 1946.

SCUNTHORPE AND DISTRICT WAR MEMORIAL HOSPITAL, Scunthorpe, Lincs. (234 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of TWO HOUSE OFFICERS (A), now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £275 per annum, with full residential emoluments.—S. Lord, Secretary-Superintendent.

SOUTHPORT EMERGENCY HOSPITAL.—Applications are invited from registered medical practitioners for the following posts: HOUSE SURGEON (A). Practitioners within three months of qualification who are liable to service under the National Service Acts may apply. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months. Otherwise it will be for a period not exceeding one year. Salary at the rate of £120 p.a.

HOUSE SURGEON (B2), ORTHOPAEDIC. R and W practitioners who now hold A posts may apply. If held by an R practitioner the appointment will be limited to six months. Otherwise it will be for a period not exceeding one year. Salary at the rate of £200 p.a

RESIDENT SURGICAL OFFICER (B1) Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary at the rate of £250 p a

All appointments are with full residential emoluments. R practitioners applying for the B2 or B1 posts must have held the necessary previous appointments. Applications should be addressed to the Medical Superintendent.

ST. MARY'S HOSPITAL FOR WOMEN AND CHILDREN, E.13.—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1), now vacant. Applicants must have held a house appointment and had surgical experience. R practitioners holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary at the rate of £225 per annum, with usual emoluments.

Applications are also invited from registered medical practitioners including R practitioners now holding A posts for position of RESIDENT PHYSICIAN (B2), now vacant. If held by an R practitioner appointment will be limited to six months. Salary at the rate of £175 per annum, with usual emoluments.

Applications to be sent as soon as possible to the undersigned.—A. Ernest Wilkes, Secretary.

SALVATION ARMY. The Mothers' Hospital, Clapton, E.5.—Applications are invited from medical women for the post of JUNIOR RESIDENT MEDICAL OFFICER (B2), vacant December 1, 1945. Salary £110 per annum, with board, residence, laundry. The appointment is for six months. W practitioners who now hold A posts may also apply. Applications to be sent to the Secretary-Superintendent, Col. Fred Hammond, and must be received by November 3, 1945.

ST. GEORGE'S HOSPITAL, S.W 1.—Applications are invited for the post of MEDICAL FIRST ASSISTANT (B1), male, to be instituted from October 1, 1945. R practitioners who now hold B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A M.C. The duties will be full-time and will include the clinical care of a medical firm under the direction of a physician and an assistant physician; also the keeping of hospital records and instruction of students Salary £450 p.a. The appointment will be for one year in the first instance, renewable annually up to three years. Applicants must hold the M R.C.P. Applications to be sent to the Secretary, St. George's Hospital, London, S.W.1, as soon as possible.

ST. MARK'S HOSPITAL FOR CANCER, FISTULA and Other Diseases of the Rectum, City Road, London, E.C.1.—Applications are invited from registered medical practitioners (male) for the appointment of HOUSE SURGEON (B2) vacant on December 1, 1945. The appointment is for six months. Salary at the rate of £150 per annum, with full residential emoluments. R practitioners who now hold A posts may apply. Applications should be sent to the undersigned. Raymond Bull, Secretary.

THE STOCKPORT INFIRMARY (167 beds).—Applications are invited from registered medical practitioners for the post of ASSISTANT RESIDENT SURGICAL OFFICER and CASUALTY OFFICER (B2), which becomes vacant immediately, including R practitioners who now hold A posts. Salary is at the rate of £175 per annum, with full residential emoluments, and the appointment is for six months. Applications to be sent to the undersigned forthwith.—H. G. Price, Secretary-Superintendent.

SALISBURY GENERAL INFIRMARY.—The Committee of Management invites applications from suitably qualified practitioners, including those at present serving in H.M. Forces, for the permanent appointment of HONORARY ASSISTANT OPHTHALMIC SURGEON. Applications to be forwarded to the Superintendent and Secretary by February 13, 1946.

SALISBURY GENERAL INFIRMARY.—The Committee of Management invites applications from suitably qualified practitioners for the appointment of TEMPORARY HONORARY EAR, NOSE, AND THROAT SURGEON. Applications to be forwarded to the Superintendent and Secretary by November 14, 1945.

ST. ANDREW'S HOSPITAL, Northampton.—Applications are invited from registered medical practitioners for appointment of TEMPORARY ASSISTANT MEDICAL OFFICER (B1) Previous psychiatric experience advisable, but not essential. Commencing salary £500 per annum, together with board, lodging, laundry, and attendance. Suitably qualified R and W practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications should be sent to the Medical Superintendent.

STAFFORDSHIRE GENERAL INFIRMARY, Stafford.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A). Salary £196 per annum, with board residence. Practitioners within three months of qualification and liable under the National Service Acts may also apply, when appointment will be for six months. Applications to be forwarded to the undersigned.—A. E. Collins, Secretary.

THE CHILDREN'S HOSPITAL, King Edward VII Memorial, Birmingham, 16.—ASSISTANT RESIDENT SURGICAL OFFICER (B2). Applications are invited from registered medical practitioners, male or female, for the appointment of Assistant Resident Surgical Officer (B2), now vacant, including R and W practitioners who now hold A posts Applicants must have had surgical experience. The salary is at the rate of £150 per annum, with full residential emoluments, and the appointment is tenable for six months.

ASSISTANT CASUALTY OFFICER.—Applications are also invited from registered medical practitioners, male or female, for the appointment of Assistant Casualty Officer (B2) including R and W practitioners who now hold A posts. Applicants must have had surgical experience. The salary is at the rate of £150 per annum with full residential emoluments and the appointment is tenable for six months.

Applications for each post should be sent to the undersigned as soon as possible.—Arnold Tunstall, House Governor.

THE CHILDREN'S HOSPITAL, Sunderland (in Association with the Royal Infirmary, Sunderland) 70 beds.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A) and HOUSE PHYSICIAN (A) now vacant, including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for a period of six months. Salary is at the rate of £175 per annum with full residential emoluments.—T. F. W Mackeown, House Governor and Secretary.

THE GUEST HOSPITAL, Dudley (the resident staff consists of a resident surgical officer and three house surgeons.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R or a W practitioner, the appointment will be limited to six months. Salary at the rate of £200 per annum, with full residential emoluments.—H. Raymond Hurst, House Governor and Secretary.

TILBURY HOSPITAL, Tilbury, Essex.—Applications are invited from registered medical practitioners for the appointment of male RESIDENT SURGICAL HOUSE OFFICER (B1) to become vacant on November 1, 1945 Applicants should have held house appointments and had surgical experience. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M C. Salary is at £350 p.a. Applications to be sent to the Resident Secretary, Tilbury Hospital, Tilbury, Essex.—F. A. Lyon, Administrator and Secretary, Seamen's Hospital Society

---

THE WILLESDEN GENERAL HOSPITAL, Harlesden Road N.W.10.—Applications are invited for the resident appointment of CASUALTY OFFICER (B2). Vacant November 1, 1945, including R and W practitioners who now hold A posts. Salary at the rate of £175 per annum with full residential emoluments. The appointment will be for a period of six months. Applications should be sent to the undersigned immediately.—J N. Drake, Secretary.

WILLESDEN GENERAL HOSPITAL, Harlesden Road, N.W.10.—Applications are invited for the following post: SENIOR CASUALTY OFFICER AND FIRST ASSISTANT TO THE FRACTURE CLINIC (B1), F.R.C.S. (England) preferred. This post is suitable for candidates intending to specialize in fractures or industrial medicine. R and W practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Whole-time post, salary £550 per annum, resident. Applications giving names of three referees to be forwarded to the undersigned, from whom copies of the regulations can be obtained. Applications will be received up to November 30, 1945.—J. N. Drake, Secretary.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 20 1945

THE CASE FOR PRIVATE PRACTICE

BY

J. CAMPBELL YOUNG, M.B., B.S.
Knock, Belfast

Sir William Beveridge, whose report on social services now forms the basis of much political activity, has said that the private practice of medicine will be greatly reduced, and eventually will be altogether replaced by a State medical service. What is this flimsy thing called private practice that has been all but blown away by the idle breath of one man?

The private practice of medicine is not the concern of doctors only, but of patients also and their friends. It is a partnership in which the doctors provide the technical administration and the patients and their friends the civil and financial administration. Private practice is a vigorous going concern which has been built up through long centuries of hard and cumulative endeavour by patients and doctors working together.

Assets

The assets of private practice are counted not in millions but in hundreds of millions of pounds. They include: (1) The capital value of all the voluntary hospital buildings in the country. (2) The capital funds of all the voluntary hospitals. (3) The capital value of all medical schools. (4) The enormous capital value of the goodwill of this great work, because it is actively and continuously producing results.

There is a common but erroneous belief that doctors have a vested interest in private practice. Apart from their houses and personal equipment doctors own no property in private practice. All ownership is public. When a doctor buys a general practice he buys goodwill only—a very abstract entity. His success depends not on his own opinion of his work but on the approval of the people whom he serves. Specialists own no part of the property of the voluntary hospitals. Usually the work done by specialists in these hospitals is voluntary and unpaid. Their reward consists in training to do highly skilled work, and appointments which assure the public that they are competent to do their special work in private. The voluntary hospitals are owned and controlled by the people whom they serve, acting through lay committees or governors. Private practice is, therefore, a completely democratic system; to establish a 100% State medical service would convert a democratic into a bureaucratic system.

Organization

The organization of private practice is national in scope. It has branches in every city, town, and village in the country, and practically no British citizen goes through life without coming in contact with it and being grateful for its activities. This organization was not built on ideological theories, but was evolved under the stern discipline of practical experience; its great wealth and its sound structure give it immense power. The ethics of medicine have enabled the power and the resources of private practice to be devoted solely to the advancement of medicine. Politicians do not share the ethical code of medicine. The danger of handing over control of the wealth and power of private practice to politicians is very grave and very obvious. Doubtless they would like to see the health of the people improved, but it is not their single-minded purpose. Sir William Beveridge showed them that they must have control of medical certification in order to control the outgoings from social security funds, and they agreed. This has nothing to do with the advancement of medicine, but it possesses great possibilities for exerting political power and pressure.

Ethical Aspects

The basis of the ethics of medicine is the relationship between the doctor and the patient, who, in his distress, is very dependent on the sympathy and good faith as well as the skill of his doctor. The normal work of the public health doctor requires a quite different approach. The community or State is interested far more in diseases than in patients; it is statistically interested in epidemic diseases and those which cause the greatest loss of working hours. When it moves at all it tends to establish clinics—tuberculosis clinics, clinics for ante-natal supervision, child welfare, etc.; it prefers to deal with people in the mass in schools, health centres, and factories. This is the important facet of medicine studied under the title of "State medicine." It is the legitimate and natural attitude to medicine of the State and of the State medical officer, but it is not the attitude of the private practitioner nor of the private patient. Not only does a sick person take an individual view of his illness, but the effects of the same disease on different people vary more widely than the effects of the same hat on different women. A State medical service designed to replace private practice is almost a contradiction in terms. The divided loyalty of a public servant attending a private citizen would require a new and very difficult code of ethics.

The present crisis displays two weaknesses in the organization of private practice. First, in spite of earnest endeavour and great generosity on the part of patients and their friends, and in spite of much altruistic service on the part of doctors, funds, large as they are, are not sufficient to meet the needs of all. Secondly, though private practice is national in scope its organization is not integrated or coherent on either the civil or technical side; each city, town, and village, rich or poor, is left to provide for itself, and there is uneven distribution of services. Financial stringency is not in itself serious, for it is typical of every expanding business. It would be a sign of decadence if the private practice of medicine had no overdraft at the bank. Nor is the lack of centralized control really serious, for local control, at least of funds, has many advantages. Power, for instance, is not concentrated in a few hands. Mistakes made by central authority affect the whole country; mistakes made by a local body affect a small part of the system only and are more easily corrected.

These two weaknesses are not serious in themselves and are under a continuous process of correction by evolution and experience, but they have become grave at the present time, for they have given the politicians their excuse for demanding that they shall take control; they threaten a revolution that will destroy much that has proved its value in evolution. It has become urgently necessary for doctors and their patients, actual and potential, to remedy the weaknesses of private practice and so prevent the intrusion of politics into medicine. Doctors already have an organization to supervise the technical and ethical aspects of medicine. No part of its work has hitherto been political because politics have no important part to play in medicine. Patients are practically unorganized save for the voluntary hospitals committees, which, like the doctors, have suddenly been plunged into unwonted and wasteful political activity by the threats of the politicians to take control of their work and wealth.

A plan to improve the organization and strengthen the finances of private medical services is urgently required. These services require to be, and can be, quite clearly defined. They are the personal and hitherto strictly private services rendered to individual persons and families by, or under the personal supervision of, doctors whose names are on the *Medical Register*. They are quite distinct from community or public health services, which, under the title of "State medicine," are the proper province of State or public health authorities and are not provided by private practice. The centralized organization that is suitable for public community services is not apparently suitable for the personal services to private citizens. Had it been suitable, at least some progress towards central organization would have been made before now. Probably the integration of medical services should be planned from the periphery inwards rather than from the centre outwards, first importance being given to the needs and wishes of the patients, and secondary importance to the needs or the uniformity of the system.

Every citizen without exception is liable to incur debt for medical services suddenly and unexpectedly, and often when he is least able to pay for them. The cost of medical services would, therefore, be appropriately provided for by insurance. Healthy persons may often be unwilling to insure against sickness; compulsory insurance, therefore, is justifiable even in a free country. Hundred per cent. health insurance is desirable combined with 100% private, *not* State, medical service. The State has hitherto given little help to private practice, which has achieved much and is extending its services rapidly. The aim of sincere politicians is to extend the benefits of private practice to those who cannot afford to pay for them. Private practice, which is already owned and controlled by the public (doctors being paid only for services rendered and drawing from it no unearned income), already has the organization, and only needs additional funds and personnel to extend the full benefits of medicine to everyone. The introduction of a State-controlled medical service would be revolutionary, inappropriate, experimental, expensive in administration, and is quite unnecessary.

As I pointed out at the beginning the private practice of medicine is a partnership between doctors and patients (actual and potential), in which the responsibility of doctors is for the technical administration, that of the patients is for the civil and financial administration. This distinction is observed in the conduct of the voluntary hospitals. A lay committee of governors controls the civil and financial administration, while the doctors advise on technical aspects. These two aspects of medicine are complementary but quite distinct, and in many ways opposite or reciprocal to one another, like the right and left hands of the same body. The patient requires services; the doctor provides them. The patient is the employer, the doctor his servant. The patient vaguely demands that he be enabled to keep or regain his health and is willing to bear the cost; the doctor studies the practical means to that end. The patients, though desiring the best possible health services, have still to weigh their cost in time, attention, and money against that of other necessary things, and put a limit on expenditure. The doctor's duty, in the first place, is to study all health measures and techniques regardless of cost, then to state clearly their relative values in alleviation of human suffering, thus enabling the patients to select the immediately attainable from the remotely attainable, the urgently necessary from the ultimately desirable.

The following plan will be described in the first place as though it included everyone. Its scope, if co-operation of the Government could not be obtained, will be discussed later.

The Plan

Assuming the principle of 100% health insurance (already accepted by all parties in politics) to be operative, the organization of private or personal health services would be in two parts: (*a*) the civil administration conducted by a series of lay committees elected by subscribers; (*b*) the technical administration conducted by a parallel series of medical committees. The service would be organized at four levels by: (1) local lay health committees and local medical committees; (2) district lay health committees and district medical committees; (3) regional lay health committees and regional medical committees; (4) a combined national health council.

The local lay health committees would be elected at general meetings of all the subscribers in a locality, which would be defined geographically for convenience, in extent by the number of subscribers resident in it, and technically by its proximity to a large hospital.

All the general practitioners in the locality would together form the local medical committee, which would be responsible for advising the subscribers and their committee about the medical needs of the locality—e.g., general practitioner hospitals, nursing homes, maternity homes, clinics, diagnostic centres, or other desirable things—and the cost of them. The lay committee would then be responsible for adopting, modifying, or rejecting the advice of the medical committee, and for providing the necessary funds and directing the civil administration of the final plan. A fixed proportion of the premium income from the locality would be at the disposal of the local health committee, who would account to the subscribers, not to any central authority, for their expenditure. Rural localities would have a larger proportion of their insurance premiums devoted to their local needs than urban localities, to meet the relatively greater costs of smaller hospitals and of general practitioner services. These local committees would be a new development; they would serve to stimulate the interest of the whole population in their own health services, and would bring general practitioners together for valuable co-operation—valuable to themselves and to their patients.

The local lay health committees of a district would meet together to co-ordinate their work and to elect or approve representatives to a district lay health committee, which would usually be in charge of the civil administration of one or more large hospitals. These district committees, besides co-ordinating (but not controlling) the work and expenditure of the local committees, would have at their disposal a further fixed proportion of the premium income of all subscribers in the constituent localities. The localities would thus be affiliated to the hospitals on which their specialist services would be based and to which they would send their difficult cases. Out of the funds at the disposal of these committees would be paid the costs of district, as distinct from local, medical services, including the equipment and running expenses of the hospitals and the salaries of the medical and nursing staffs. The payment of specialists would probably be a matter of national policy, but the number and nature of the appointments in any district would be under the control of the district health committees, medical and lay. The district lay health committees would also administer the capital funds at present owned by the voluntary hospitals, and establish capital and sinking-fund accounts and borrow, on the security of their assured income, for further building and development. They would receive legacies and encourage local generosity and enthusiasm to provide funds over and above the premium income. The present voluntary hospitals committees would be the natural fathers of the district committees; they know their work and love it.

District lay and medical committees of a region would meet and elect or approve representatives to regional lay and medical committees, whose work would be respectively the civil and technical co-ordination of the medical services of large regions of the country. They also would have control of funds from the premium income, and would administer special hospitals, sanatoria, convalescent homes, and institutions perhaps for the admission of chronic cases, the aged and infirm. Finally, the regional lay and medical committees would meet and elect or approve representatives on the national health committee, which would decide matters of national policy.

The vast majority of committee members would give voluntary service and enjoy the work; the great expense of an administrative staff such as a centrally controlled State service would require would be avoided. The allocation of funds to local, district, and regional committees would decentralize the control of detailed expenditure and greatly simplify and reduce the cost of keeping accounts; the accounts of the various committees would interest so many people that falsification would be nearly impossible.

A central authority tends to simplify its control by standardization of method; the various committees here suggested would adapt medical services to their particular needs, and a great variety of methods would be tried out and their value estimated. The plan is, therefore, suitably flexible to deal with so actively growing and evolving a subject as medicine. A mistake made by any one committee would affect a part of the system only, and would be reparable, whereas a mistake made by a central authority would affect the whole system and would often require to be bolstered up by further inappropriate action. Personal health services have not yet been subject to central control, and no experience of such working is available; mistakes will be inevitable.

Finance

The finances of the health insurance plan would be managed by a national health insurance corporation, which would collect all premiums and would be responsible for the actuarial and statistical work on which the solvency of the scheme would depend. This corporation would guide the national council in its use of the funds available, and keep the accounts of the various committees with the scheme. On the security of its assured income it could borrow at low rates of interest and allocate funds for building and other capital expenditure to the various committees. It would have no ownership or control of medical affairs.

Several rates of premium could be made available. A low premium could be related to family income and ability to pay rather than to actual cost. Much property is owned by the voluntary hospitals which has been given for charitable purposes and must continue to be used to help those who are unable to help themselves. This premium would require disclosure of income. A standard rate of premium would entitle subscribers to all necessary medical care administered with full efficiency but also with strict economy, as in the large wards and out-patient departments of the present hospitals. A third rate of premium would meet the costs of private clinics with small wards and small rooms administered comfortably but without extravagance. General practitioner treatment would, of course, be similar on all rates of premium. Probably admission to hospital or nursing home should not be absolutely free. People have to be fed at home as well as in hospital. Considerable adjustments of premium could be arranged if individual subscribers undertook to pay £1, £2, £3, or more a week if and when they became in-patients. Apart from these definite prearranged charges there would be no extras; medicines, dressings, and treatments used in hospital would be free of charge to the patient. The cost of drugs and medicines should normally be a small item, and should not be included in the health scheme, but a fund could be established out of which the cost of specially expensive yet necessary medicines and surgical appliances would be paid. Restricted prescribing and an expensive staff for costing and checking prescriptions would thus be avoided.

A very rough estimate of the cost of the plan can be arrived at by allocating £1 per annum per person for the general-practitioner's fee, £1 per annum for specialist fees, £1 per annum for hospital and nursing expenses, and £1 per annum for capital and development expenditure, for administrative costs, and for research, making a standard premium of £4 per annum per person. Bachelors and childless couples could be required to pay more, and large families a lot less, per head, regard being given to the relation between the family income and the number of dependants. A self-supporting scheme of this sort would relieve the Government of much responsibility and expense. A strong claim for premiums to be paid free of income tax could be put forward. Exemption from tax at 6s. in the £ would reduce a £4 premium to £2 16s.

Private Practice and a State Medical Service

Everyone is agreed that actual *ad hoc* treatment of disease should be available to all, rich or poor. But medical services cost money and many people are unable to pay for them, first, because work is not available for all, and, secondly, because the wages structure of industry is so grossly out of relation to the value of work done that even hard work at essential tasks leaves many men unable to provide food, clothing, housing, recreation, and medical services for their families. The absurd spectacle results of wage-earners being robbed by employers, who are robbed in taxation to provide so-called social services for workers who could quite well provide for their own needs, as "middle-class" people do, if only they got the wages they earned. The elaborate and expensive administrative mechanism of the two robberies and the restitution is ludicrous. The social services are financed by (1) workers' contributions which acknowledge the essentially personal nature of the services; (2) employers' contributions which are a strangely frank admission of robbery No. 1; and (3) the State contributions which, being paid out of taxes, tacitly admit robbery No. 2 and condone robbery No. 1. Clearly if the workers had not, in fact, earned the money involved they would not be worth this expense, and the contributions of the employers and of the State could not and would not have been payable: they would have caused national bankruptcy.

It is apparently the intention of the Government to establish a State owned and controlled personal medical service in order to hand out medical services as wages in kind to the underpaid workers of the country. Other wages in kind are "free" education, "free" milk, and "free" meals in schools as well as "free" medical services. Thus the under-dog is kept under, for he gets his keep, but has no choice in the spending of his earnings. The "truck" system, declared illegal by Parliament in 1831, 1887, and 1896 because it interfered with the freedom of the labourer, is being reintroduced on a gigantic scale immediately after a war has been won for personal freedom against State dictatorship. It is a solemn duty of medicine at the present time to preserve the democratic system of private practice, and not to condone, let alone sell out all medical services to make easy, this reintroduction of the "truck" system.

It is clear that, pending a more fundamental solution of the problem of undeserved poverty in a prosperous land, the Government could pay into some such health insurance scheme as above described the premiums of those unable to pay their own. Then the whole of the medical services of the country could be organized under one system. If, however, the Government is irrevocably committed to the institution of a State personal medical service, or is anxious to obtain political power over the people by this means, it is still possible to preserve private practice by integrating its activities along the lines described. Two health insurance services could work side by side, as in fact they are working now, one State-controlled, the other a private service. The State service would be based on an extended application of the present panel system, and specialist and hospital services would be based on the large rate-supported hospitals and such other smaller hospitals and health centres as the Government saw fit to build and maintain. It would probably be financed by workers, employers, and Government contributions on the robbery and restitution plan now in operation.

The private plan would be entirely supported by the subscribers to it and would be entirely under their control. It would be based on present private practice, and specialist and hospital services would be provided by voluntary hospitals, private clinics, and nursing homes. The private health insurance scheme would be as closely co-ordinated with the State scheme as complete financial and administrative independence would allow. The committees of the private services would co-ordinate their work with parallel State service committees. General practitioners would usually attend patients under both services and maintain the family-doctor tradition so far as clinics for this and that disease would permit. State patients would, of course, go to State hospitals, while private patients would go to the voluntary hospitals, private clinics, and nursing homes. At the hospital level, if State and voluntary hospitals were widely separated, the State hospital would have a private wing and the voluntary hospital a State wing. Each service would pay the other for services rendered, and would share the cost of laboratories, *x*-ray plants, etc., used in common. Specialists working mainly in one service would not be debarred from accepting part-time appointments in the other. It would often be important, in spite of difficulties of payment, to arrange that the services of specialists should be available to all classes of patient. At the regional level it would often be convenient for the two services to combine in the building and administration of special hospitals, colonies for tuberculous patients, rehabilitation centres, convalescent camps, etc.

Three ways of solving his health problems would be open to each individual: (1) he could pay into and make use of the State service; (2) he could pay into and make use of the private service, with a varied choice of premium; (3) he could pay into the State service as a sort of tax, but make his own arrangements for medical attention. It would not be unreasonable to hope that the private system would gradually include a larger and larger proportion of the people as the relation of wages to the value of work done improved, and that eventually public authority would be concerned only with impersonal, community, public health services, and not at all with the highly personal and private services rendered by doctors to individual citizens.

INSURANCE ACTS COMMITTEE

A meeting of the Insurance Acts Committee was held on October 4, Dr. E. A. Gregg presiding. Dr. H. H. D. Sutherland was welcomed to the committee as a direct representative for London in place of Dr. F. Gray, who has been elected to the committee by the Annual Representative Meeting. A letter was received from Dr. L. J. Picton resigning his membership on account of ill-health. The chairman said that this resignation was received with very great regret, for Dr. Picton in the course of many years had contributed much valuable counsel. It was resolved that a letter be sent to him, expressing sympathy in his illness and gratitude for his distinguished services.

Certification

The chairman reported on various matters which had been further discussed with the Ministry of Health, in some cases with a fruitful result. The Minister proposed to amend the medical certification rules so that special intermediate certificates may be given at intervals of not longer than eight weeks (instead of four weeks as at present) after six months' continuous incapacity, the condition being, of course, that the patient did not require treatment at more frequent intervals than those specified. The Minister did not feel justified in agreeing to the issue of special intermediate certificates before the end of the first month of incapacity.

Dr. Howie Wood suggested that a protest should be made to the Ministry at the delay between the first representations made on this subject and the concession now announced. In that interval thousands of certificates had had to be given unnecessarily by doctors, and this during the most difficult period of the war. The chairman thought that in fairness it should be stated that this amendment was the result of the last representation made three months ago. The Ministry had had to persuade or overrule the societies.

References to Tuberculosis Officer

The circular letter on the subject of tuberculosis issued by the Ministry to local authorities on June 4, to which the committee, supported by a resolution of the Annual Representative Meeting, had taken the strongest possible exception, was the subject of further correspondence. The Ministry had now written pointing out that the procedure whereby insured persons were referred to specialists when this was considered necessary to enable the examining medical officer to report whether or not they were incapable of work was already well established, so that the Ministry presumed that the committee was concerned rather with cases where reference to a specialist was suggested not for the purpose of determining incapacity for work but in the interests of the treatment of the patient.

"The Minister appreciates the committee's point of view on this matter and he is arranging that in those cases where the opinion of a specialist is considered to be desirable for reasons other than the satisfactory discharge of the reference, no steps will be taken for the specialist's examination before obtaining the consent of the insured person's practitioner."

The chairman said that while it was recognized that the Minister's statement fairly set out the present position, it would be better in the interests of the patient and of the service in maintaining a high standard in the determination of incapacity if all approaches to the tuberculosis officer came through the practitioner. The reply of the Ministry to the point which had been raised with so much emphasis must be considered satisfactory, but it still left those cases which the Ministry considered it necessary to refer in order to have a satisfactory discharge of the reference on the issue of disability. It should be emphasized that action by the Ministry in other cases should lie only where a practitioner was persistently slack and careless, and in such cases it was the duty of the Ministry to draw the attention of the Panel Committee to the practitioner's dereliction.

Fees of Part-time Referees

A request was received that the committee should take up with the Ministry of Health the question of an increase in fees payable to part-time medical referees employed by the Ministry of Health for the examination of insured persons referred by approved societies. The present fee is two guineas a session, and as many as 13 persons are summoned for examination. The committee expressed the view that such fees should be increased, and asked for the concurrence of the General Practice Committee on the ground that the part-time medical referees in question are not always and necesarily insurance practitioners, and also that the recommendation should be in harmony with those concerning fees paid by the Ministries of Labour, Pensions, and Education.

The chairman reported that he had considered the request of the Bristol Local Medical and Panel Committee for the formation of a new group consisting of Bristol, Somerset, Gloucester, and Gloucestershire, so as to give the West Country improved representation. He had to confess, however, that after many attempts he had found it impossible so to redesign the areas as to meet this problem satisfactorily, short of recasting the whole basis of representation of groups of committees on the I.A.C. Every alteration appeared to create equally big difficulties in other areas.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. I. G. W. Hill, at 14, St. John's Road, Edinburgh 12; Dr. L. H. Howells, M.R.C.P., at 71, Cathedral Road, Cardiff; Mr. A. E. Porritt, F.R.C.S., at 3, Regent's Court, Park Road, London, N.W.1; Mr. B. W. Rycroft, F.R.C.S., at 149, Harley Street, W.1; Dr. J. D. Simpson, M.R.C.P., at 69, Bridge Street, Cambridge; Mr. Arthur S. Wesson, F.R.C.S., at University College Hospital, Gower Street, W.C.1; Sir Russell Wilkinson, at 82, Portland Place, W.1.

HEARD AT HEADQUARTERS

A Busy Day

Interesting computations are made sometimes of the practicable maximum of a doctor's list, supposing the capitation method to continue, wholly or mainly, in a comprehensive national service with 40 million insured persons. One estimate by a busy Lancashire doctor was given at a meeting of practitioners the other day. In his view, for what it is worth, any active general practitioner has it within his capacity to perform a daily routine of 80 items of service. On the basis of a five-day week this would be 400 items, and of a fifty-week year, 20,000 items, and supposing that the average call upon a doctor for each insured person on his list is five times a year, we are given a maximum of 4,000 insured persons for each doctor. The arithmetic is unexceptionable, but some may be inclined to question the basic figure of 80 items a day. Even if the doctor's day be extended to thirteen hours, it leaves less than ten minutes for each item. Country practice has to be reckoned as well as town, visits as well as attendances at the surgery, lengthy examinations as well as the signing of certificates. Moreover, is it not a fallacy to suppose that whatever may be the figure for annual calls by the present insured population, it or anything like it will necessarily hold good for the rest?

Protection of Practices: An Essex Proposal

The Essex Panel Committee has made a proposal for extending the principle of the Protection of Practices Scheme to meet the case of returning doctors whose lists have been depleted during their absence. The proposal is for an amendment of the distribution scheme to secure to each such doctor for a limited period payment out of the practitioners' fund to an extent not less than he received during 1939. The doctor will have the benefit of this payment for six quarters following his return to practice, unless, meanwhile, he has succeeded in building up his practice to the 1939 level. The scheme is to apply only to doctors who have not deputies or partners looking after their interests. At the peak figure it is estimated that the proposal would involve a sum representing about 1% of the practitioners' fund, but it is unlikely that this peak will ever be reached, partly because the doctors will not be returning simultaneously, and partly because the demand of any individual doctor may be expected to decline progressively from quarter to quarter as his normal practice grows.

The Central Protection of Practices Committee of the B.M.A. views the proposal with sympathy, but insists that the insurance doctors in the area must be consulted, and the scheme must proceed only if there is no substantial opposition to it.

Returning Practitioners

It is hardly surprising that there is a certain amount of complaint on the part of returning doctors about the state of their practices, not only because of the length of time involved but also because of the drastic changes in the residential and industrial circumstances of very many, if not most, areas. Admittedly there have been cases in which individual doctors left at home have failed to act in the spirit of the Protection of Practices Scheme. Legal action to the extent of a solicitor's letter has been taken in some instances to enforce the carrying out of the contract by a practitioner who is found not to be fulfilling his obligations, and this has generally been enough to produce useful results.

It may well be, however, that returning practitioners would be better pleased to have such assistance as is provided in the Essex proposal described above rather than that punitive action should be taken against defaulters, which might afford them a certain moral satisfaction, but nothing more.

National Insurance Defence Trust

Dr. J. W. Bone, treasurer of the National Insurance Defence Trust, announced at the last meeting of the trustees that the investments of the Trust, taken at the purchase price, now amount to over £306,000, and that the present market price is considerably above that level. A subcommittee has been appointed to investigate the setting up of a guarantee fund which would bring the trust moneys up to £1,000,000. In some quarters it has been suggested that the National Insurance Defence Trust might help doctors returning from active service to re-establish themselves in practice. This point has been put to the solicitors to the Trust, who find, however, that they cannot advise that it would be within the objects of the Trust to make grants of this kind. The financial support that may be given is limited to cases in which such support is required because the practitioners have suffered from the action taken by them in consequence of the policy laid down by the central body of insurance practitioners, and this can hardly be stretched to cover enlistment in the Forces.

The difficulty of such a Trust is that its terms may not be varied without the sanction of all contributors, and any objecting contributor could proceed through the courts to obtain an injunction. That any contributing practitioner would do such a thing is a remote contingency, but when it comes to many thousands of people the possibility cannot be ignored.

Shortage of Radiographers

It is not only hospital nurses who are "in short supply" but also trained auxiliaries. There is an acute shortage of qualified radiographers, and this at a time when there is a general tendency for the work in hospital *x*-ray departments to increase. So acute is the shortage that the L.C.C. is proposing to meet it in an unusual way. It already has a recruitment of pupil radiographers from State-registered nurses who have been trained in its hospitals, and who, as pupil radiographers, have a fixed salary. It is now proposed to admit for training at two of the large council hospitals—Hammersmith and Lambeth—candidates of both sexes who are not State-registered nurses and who will be known as student radiographers, but without salary during their training; on the other hand, they will not have to pay any premium. To have two classes of people doing the same work, one called students and the other called pupils, one paid and the other not paid, seems anomalous, but the position will probably regulate itself.

Depressing Hospitals

The other day I went to see a friend who, recovering from a severe operation, is in a private room in a London voluntary hospital. The room, for which he pays eight guineas a week, is deplorable in its workhouse-like, its prison-like appearance. The walls have a plain wash of ugly green, entirely unrelieved. Neither in the room itself nor in the scene from the window is there anything to please the eye. The surgical service is all that can be desired; the nursing service, allowing for present stringency, is tolerable; but the room itself—and the same applies to the public wards—is depressing in the extreme, and calculated to delay the recovery of any invalid. Cannot the administrators of hospitals devise some scheme whereby rooms and wards are given a touch of colour and decoration? Cannot they have curtains, bright paint? It can scarcely be a question of cost. It is more a question of someone's initiative and the exercise of taste. The therapeutic effect of cheerful surroundings seems to be entirely disregarded in at any rate some of our larger hospitals.

A NATIONAL HEALTH SERVICE

Readers of the *Fortnightly* for October are well served by Mr. H. S. Souttar's article on a National Health Service. In an article of the very readable length usual in that journal he has managed to cover the history of medical planning from 1929, when the B.M.A. made its first proposals for a general medical service for the nation, to the discussions last summer between the Negotiating Committee and the Ministry of Health; which, he points out, had resulted in substantial agreement on proposals that would have formed an acceptable basis for a complete scheme. Thus, most of what Mr. Souttar writes is history and too well known to need repetition here, but he does take up the 100% issue for the benefit of the layman. It is easy, he says, to arrive at an income limit for the services of a general practitioner, but quite a different proposition when it comes to the very much more expensive services rendered by a hospital. Then there are people who value a greater degree of personal attention than is possible in a public service and are prepared to pay for it, and it would be hard if they were deprived of any advantage it may offer. A fair compromise, states Mr. Souttar, is to include everyone in the service "but equally to leave everyone free to make independent arrangements if they wish." There would not, of course, be any question of better treatment, because those responsible for the services would see that *all* treatment was the best possible. With such a total service every individual would receive a treatment card, which, if he wished to avail himself of the public service, he would take to the doctor of his choice. He would then be on that doctor's list, but that doctor would be free to refuse any patient, and equally free to treat and charge as a private patient any person not on his list. Moreover, a patient would be free at any time to transfer from public to private service, or vice versa. The services of a consultant would be available to every patient on the reference of his general practitioner, who would also be able to arrange private consultant and hospital treatment for a public patient or obtain public hospital or consultant services for a private patient. There would thus be complete freedom of action in every direction. These proposals, Mr. Souttar concludes, would ensure that every man, woman, and child could rely on getting all the advice and care and treatment they required, regardless of their financial position or of any consideration other than their real need.

THE "VOLIMS" COMMITTEE

In June, 1944, at the request of the chairman of the Consultant Services Committee of the three English Royal Colleges and other consultant representative bodies, a general representative meeting was held at the Royal College of Physicians of the non-undergraduate teaching consultants of the Metropolitan area. It was a large meeting and was confined to such consultants as were attached to the 150 or more non-undergraduate teaching voluntary hospitals of London—that is to say, it was a representative meeting excluding consultants attached to undergraduate teaching schools and also any medical men of consultant status who were in whole-time local government service.

Following this meeting a committee of fourteen was elected, with Mr. W. E. Tanner as chairman and Dr. T. Rowland Hill as secretary. This committee, now known as the Volims Committee (a word formed out of some of the initial letters of the phrase "voluntary hospitals of London independent of medical schools"), worked regularly thereafter to prepare a plan for a consultant and specialist service for the nation. This plan has been published under the title "A Regional Consultant and Specialist Medical Service, based on University Medical Centres," and copies may be obtained upon application to the secretary of the committee (14, Wimpole Street. W.1). [We referred to the publication of this plan on June 30 last (p. 130).]

Three members of the Volims Committee are on the Consultant Services Committee, and play their part in expressing the opinions of the type of consultant they represent. The committee recently called a general meeting of non-undergraduate teaching consultants in the London area to report to them, to present its plan for their comments, and to refresh itself generally with their present views. This meeting unanimously approved the committee's plan and, also unanimously, decided that co-operation between the committee and the association of the major non-teaching voluntary hospitals which had recently been formed should be as close as possible with, so far as practicable, the same personnel serving in the Metropolitan area for the two bodies.

BATTESON TESTIMONIAL FUND

We are asked to inform all who wish to contribute to the testimonial to Dr. C. L. Batteson, who retires this year from the post he has held for 21 years of secretary to the London Local Medical and Panel Committee, that the fund will be closed on Oct. 31. Subscribers, of whom it is hoped there will be a goodly number, should send their remittances on or before that date to the Treasurer, Batteson Testimonial Fund, London Local Medical and Panel Committee, Tavistock House, Tavistock Square, W.C.1.

Sir William Douglas, Permanent Secretary of the Ministry of Supply since 1942, has now taken up his duties as Permanent Secretary of the Ministry of Health on the retirement of Sir John Maude. Mr. W. W. Andrew has relinquished his duties as senior regional officer, Ministry of Health, London Region, on his retirement from the Civil Service, and is succeeded by Mr. A. H. King, the deputy senior regional officer.

Correspondence

Medical Recruitment to the R.A.F.

SIR,—Your columns show that there is increasing discontent among medical officers in the R.A.F. One of the most potent reasons for this is the fact that for nearly a year the number of new entrants into the medical branch has been negligible. Medical officers who are in contact with their teaching hospitals know that house officers are being allowed to remain in B2 appointments, and that the Government has made no serious attempt to review those who are holding more senior appointments.

From the announcements made recently in the Press the total strength of the R.A.F. is going to be close on three-quarters of a million in June, 1946. This will presumably call for approximately 1,500 medical officers. Unless very large numbers of serving medical officers are to be retained for long periods it is essential that the Government should insist on all newly qualified practitioners joining the Services after six months of house appointments, and that a careful review shall be made of all who hold more senior posts. Decisions regarding the call-up of medical man-power rest with the Government and not with the Service Ministries. The Government's present policy of allowing the recently qualified to remain in civil posts while retaining in the Services many who are older and more experienced in practice is surely short-sighted.

At the present time there are large numbers of medical officers in all Services employed on sedentary duties in the United Kingdom. There must be many relatively young medical men in this country who have been rejected for service owing to minor disabilities, which, though rendering them unfit for conditions in the Tropics, certainly would not preclude service in Great Britain or Germany. I suggest that there should be a review of all those practitioners who have in the past been rejected as medically unfit, with a view to calling up those who are fit for service in the Forces at home or in Germany.

During the next few months many of the medical officers who joined the Services in 1939 and 1940 will be released. A considerable proportion of these will desire to obtain hospital appointments and can replace newly qualified men holding B2 and B1 posts.—I am, etc.,

J. J. CONYBEARE

Guy's Hospital, London, S.E.

In the Far East

SIR,—The anxiety of doctors in the Naval medical service is directly proportional to the apparently confused ideas of those making appointments relating to new establishments in the Far East; and the sluggish effort to acquaint us with the rate of demobilization is, I believe, correlated to this confusion. To quote one example. For the past six months this establishment of between 1,300 and 1,500 men has been supplied with six doctors. (For seven weeks of this period there were 2,100 men, and we were given two more doctors, until they left a short time before the Japanese surrender.) The numbers have now dropped to 1,000, and another medical officer has appeared, making the number of the permanent staff up to seven. This new arrival was told in London eight weeks ago that he would be the first to arrive at this isolated spot, but while later awaiting transport from a neighbouring station out here, some distance away, was informed by its senior medical officer that he would be the third.

I would suggest that if such gross discrepancies are permitted to occur those in authority at the Admiralty be pressed to communicate and discuss with the C.M.W.C. the numbers of medical officers in ships and establishments in relation to their complement. For what reasons could opposition be raised to this suggestion?

In the hope that I shall personally be disillusioned no further I must remain anonymous.—I am, etc.,

"SURG. LIEUT., R.N.V.R."

Only Equity

SIR,—An aspect of demobilization which can hardly have escaped the notice of readers of the *Journal*, though it has not been commented on, is the marked disparity between the numbers of new entrants into the three Services. During the last twelve weeks the commissioning of 183 doctors has been announced, 173 of whom have gone into the Army, 10 into the R.A.F., and none into the Navy. It is significant that the Army is able to release more groups than either of the other two Services. If the facts are as suggested by the lists published in the *Journal*, this is surely a case in which the C.M.W.C. could, but does not, take action to obtain equity between the Services.—I am, etc.,

"R.A.F.V.R."

*** The Secretary of the C.M.W.C. writes: The Central Medical War Committee has no alternative but to allocate the available recruits to the three Services in the proportions determined by the Government, which is responsible for both the recruitment plan and the release plan. The Committee is at present awaiting fresh Government decisions as to the recruitment "quotas" and the position of medical officers in the accelerated release programme.

The Young Specialist

SIR,—I should like to add my mite to the waxing volume of dissatisfaction with medical demobilization, this time from the point of view of the young specialist—i.e., who obtained a higher qualification in the three years prior to the war—who, because of Territorial commitments or from other patriotic motives, joined the Forces before he need have done, and thereby now finds himself in release groups 16 to 25. He suffers from uncertainty of date of demobilization, six years' absence from home, and lack of an established position to which to return. To my mind this could easily be remedied as follows:

1. In the Army, at least, general duty M.O.s have now a definite prognosis up to Group 23 and demobilize themselves with as little fuss as other ranks, whereas specialists not only lag behind their groups, but are given no prognosis at all and eventually only a few days' notice from the War Office. Surely the number of specialists in each group could be ascertained and hence a definite prognosis given. This would be of considerable help in applying for appointments.

2. Establishments built up to cope with a large estimated and unrealized casualty intake could now be immediately reduced; thereby releasing a large number of redundant and idle specialists. I know there is strong opposition to this in the higher ranks, but all good things must come to an end.

3. The intake into the Forces of young "indispensable" civilian specialists could be speeded up, and would more than compensate for the loss of serving specialists. After all, not only have we been separated from our families completely for four years and partly for two, but, whatever we may have gained in experience, we are still six years behind our civilian contemporary in home contacts and establishment. It would not be a comparable hardship for them to do, say, two years in the Forces now, with little physical hardship and regular leave. One is led to suspect their "indispensability" is not so impregnable after all.

I regret to wish to remain anonymous, and sign myself

"QUONDAM VOLUNTEER."

Short-service Commissions and Release

SIR,—"Medico, R.A.M.C." holds a short-service commission and asks (*Supplement*, Oct. 6, p. 79): "Why can't we be treated the same as any other doctor and be included in the age-and-service groups?" I agree with him that it is rather hard that he should be retained until general demobilization. It would be better if he were considered to have joined up at the time of completing his five years' short-service commission. He could then be released in the age-and-service group scheme, and be treated the same way as any other doctor. As a regular I feel he has but little to grouse about. He did at any rate want to be in the Army for five years, and many of us (including myself) have been in it for six years without ever wanting to be in it at all.—I am, etc.,

POSTGRADUATE NEWS

Fourteen-day refresher courses (22 sessions) for medical officers returning from H.M. Forces will begin at Addenbrooke's Hospital, Cambridge, on Monday, Nov. 5, and at Southend-on-Sea General Hospital on Monday, Dec. 3. Applications for further information and admission to these courses should be made to Dr. Firth, Trinity Hall, Cambridge.

The Fellowship of Medicine announces: (1) Week-end course in rheumatic diseases, at Royal Bath Hospital, Harrogate, all day, Sat. and Sun., Nov. 3 and 4; (2) Week-end course in diseases of the ear, nose, and throat, at Metropolitan Ear, Nose, and Throat Hospital, all day Sat. and Sun., Nov. 10 and 11; (3) Primary F.R.C.S. course, January to April, 1946, three evenings weekly, 6 p.m. to 8.15 p.m. Full particulars of all courses from the Fellowship of Medicine, 1, Wimpole Street, W.

WEEKLY POSTGRADUATE DIARY

GLASGOW UNIVERSITY: DEPARTMENT OF OPHTHALMOLOGY: *Wed.*, 8 p.m., Mr. R. C. Davenport: St. Dunstan's in the Recent War.

DIARY OF SOCIETIES AND LECTURES

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—Erasmus Wilson Demonstrations by Mr. R. Davies-Colley: *Mon.*, 5 p.m. Specimens illustrating cysts and innocent tumours of the breast; *Wed.*, 5 p.m., Specimens illustrating malignant tumours of the breast. *Thurs.*, 5 p.m., Mr. L. E. C. Norbury: Certain Conditions of the Kidney, illustrated by specimens and lantern-slides.

ROYAL SOCIETY OF MEDICINE.—*Mon.*, 6.30 p.m., Section of Odontology. *Tues.*, 5 p.m., Section of Medicine. *Thurs.*, 5 p.m., Section of Urology. *Fri.*, 3 p.m., Section of Epidemiology and State Medicine; 4.30 p.m., Section of Disease in Children.

ROYAL INSTITUTE OF PUBLIC HEALTH AND HYGIENE, 28, Portland Place, W.—*Wed.*, 3.30 p.m., Dr. Doyne Bell: Some Aspects of the Public Responsibility for Child Health.

B.M.A.: Branch and Division Meetings to be Held

GREENWICH AND DEPTFORD DIVISION.—Joint meeting with Woolwich, Lewisham, and Camberwell Divisions at Miller General Hospital, Greenwich, S.E., Wednesday, Oct. 24, 8.15 p.m. Consideration of a resolution calling for an examination of the needs of the respective areas of the four Divisions "with a view to devising the best schemes of medical service." Dr. A. Macrae (Deputy Secretary, B.M.A.) will be present to answer questions.

LEIGH DIVISION.—At Boar's Head Hotel, Leigh Tuesday, Oct. 23, 8.15 p.m. Annual general meeting. Dr. G. E. Hayward: Deafness.

SWANSEA DIVISION.—At Swansea General Hospital, Thursday, Nov. 1, Clinical meeting.

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Wednesday, Oct 31, 8.15 p.m., Mr. G. Armitage: Hyperthyroidism.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

CRAIG.—On Sept. 16, 1945, at Harcourt Nursing Home, Dublin, to Cicely (*née* Huggard), wife of Squad. Ldr. J. K. Craig, R.A.F.V.R., a son.

DAVIDSON.—On Oct. 9, 1945, to Josephine (*née* Cartwright), wife of Ian M. Davidson, M.D., F.R.C.S.Ed., 1, Eden Mount, Stanwix, Carlisle, a daughter.

HUGGETT.—On Oct. 8, 1945, to Esther M. Killick and Arthur St. G. Huggett, a girl.

MARRIAGE

CAIRNS—WILSON.—On Sept. 29, 1945, at Liverpool, Robert J. Cairns, M.B., M.R.C.P., to Rose Theresa Wilson, S.R.N.

SILVER WEDDING

LINZEE—ANDREWS.—On Oct. 21, 1920, at Ipswich, Dr. Neville Hood Linzee to Blanche Constance (Maidie) Andrews. Present address: Gloucester Lodge, Thames Ditton.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of three recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

GLOUCESTERSHIRE JOINT BOARD FOR TUBERCULOSIS. Standish House Sanatorium, Stonehouse, Glos. (250 beds with orthopaedic block). TEMPORARY ASSISTANT MEDICAL OFFICER (B1) AND ASSISTANT TUBERCULOSIS OFFICER.—With the approval of the Minister of Health the Board invite applications from registered male practitioners for the above joint appointment. In addition to his duties at the Sanatorium the successful candidate will be required to undertake duties at dispensaries, etc. The commencing salary will be at the rate of £450 p.a. plus bonus, and will rise by annual increments of £25 to £600 per annum plus bonus, with emoluments of a total value of £150, and travelling and subsistence allowances in accordance with the Board's scale will be paid. Candidates should have held a resident hospital appointment and an appointment in some institution recognized for the treatment of tuberculosis, and suitably qualified R practitioners holding B2 appointments are inivted to apply. R practitioners now holding B1 appointments and rejected by the R.A.M.C. may also apply. The appointment is subject to the approval of the Minister of Health and will be determined by three months' notice in writing on either side, and the person appointed must satisfactorily pass a medical examination. Applications should be addressed to the Clerk of the Joint Board for Tuberculosis, Shire Hall, Gloucester, and should reach him not later than October 26.—Guy H. Davis, Clerk of the Joint Board for Tuberculosis.

CITY OF PLYMOUTH. City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT MEDICAL OFFICER (A) at the City General Hospital (450 beds). The appointment will be for a period of six months and terminable by one month's notice on either side at any time. Salary will be at the rate of £250 per annum, plus war bonus, and full residential emoluments. All fees received by the officer must be refunded to the Council. The duties of the post will be chiefly on the medical side of the hospital and further details may be obtained from the Medical Superintendent. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY AND COUNTY OF BRISTOL. Department of Public Health. ASSISTANT RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male or female, for the immediate appointment of Assistant Resident Medical Officer (B2) at Ham Green Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months. Otherwise it will be held for a period of one year. Salary £200 per annum, plus full residential emoluments. Application forms may be obtained from the undersigned to whom they must be returned, accompanied by copies of not more than three recent testimonials, forthwith.—R. H. Parry, Medical Officer of Health, Kenwith Lodge, Westbury Park, Bristol, 6.

COUNTY BOROUGH OF TYNEMOUTH. Preston Emergency Hospital (488 beds).—TEMPORARY NON-RESIDENT MEDICAL OFFICER urgently required for a period of two to three months at the above hospital. Duties mainly medical. Salary £10 10s. plus full residential emoluments. Applications to be forwarded to Director of Social Welfare, 4, Northumberland Square, North Shields. Canvassing will disqualify.

CITY OF MANCHESTER. Booth Hall Central Hospital for Children (760 beds). TEMPORARY RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the appointment of Temporary Resident Surgical Officer (B1) which will become vacant on December 21, 1945, at the above-mentioned hospital. Although the vacancy is on the permanent assignment of staff, the appointment will be temporary for the time being, and subsequently the officer appointed will be eligible to apply for the permanent post. Candidates must have practical surgical experience and, preferably, hold a high surgical qualification. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Basic salary in accordance with the Manchester Corporation conditions of service, commences at £475 per annum, with full residential emoluments in addition, but annual increments of £25 up to a maximum basic salary of £550 may be granted at the discretion of the Council. The salary is subject to a temporary cost-of-living wages addition. The commencing cash remuneration, at present, is £505 for a male officer, and £499 2s. 6d. for a female officer. Forms of application can be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2, and all applications must be received by him not later than November 3, 1945. (Full details of the post can be obtained from the Medical Superintendent of Booth Hall Hospital, Blackley, Manchester, 9.) Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF LEEDS. Public Health Department. Killingbeck Hospital for Infectious Diseases.—Applications are invited from registered medical practitioners for the post of ASSISTANT MEDICAL OFFICER (B2) now vacant. The salary is at the rate of £300 per annum, plus a cost-of-living bonus, and full residential emoluments. The appointment is for six months. R practitioners holding A posts may apply.

St. Mary's Infirmary.—Applications are invited from registered medical practitioners, male, for the post of RESIDENT MEDICAL OFFICER (B2) for the above hospital. The salary is at the rate of £250 per annum, plus a cost-of-living bonus, together with full residential emoluments. The hospital comprises a maternity unit of 98 beds and 102 beds for chronic sick. It is a Part I Training School under the regulations of the C.M.B., and the duties of the officer will include instruction of pupil midwives. All fees received by the officer must be paid into the City funds. R practitioners who now hold A posts may apply, when the appointment will be limited to six months; otherwise twelve months.

Applications for each post endorsed "A.M.O." and "R.M.O." respectively, to be forwarded to J. Johnstone Jervis, Medical Officer of Health, Public Health Department (Hospitals Administration Section), 12, Market Buildings, Leeds, 1.

CITY OF PLYMOUTH. Mount Gold Orthopaedic and Tuberculosis Hospital (200 beds).—Applications are invited from registered medical practitioners, male, for the post of RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had some experience of orthopaedic and fracture work. The duties are mainly in the orthopaedic and E.M.S. sections of the Hospital, but may include some duties in the pulmonary tuberculosis wards. Suitably qulaified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for one year, but terminable by one month's notice on either side at any time. Salary is at the rate of £300 per annum, plus war bonus and full residential emoluments. Married quarters are not provided. Applications should be sent to the undersigned as soon as possible, together with copies of two recent testimonials.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF BIRMINGHAM. Dudley Road Hospital (an acute general hospital with 1,100 beds). JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A) at the above hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for six months, otherwise it will be for one year. The salary is at the rate of £200 per annum, plus residential emoluments. Applications should be sent to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than November 12, 1945.

COUNTY BOROUGH OF MIDDLESBROUGH. TEMPORARY ASSISTANT MEDICAL OFFICER for Maternity and Child Welfare.—Applications are invited from registered medical practitioners who have had previous experience in ante-natal work, midwifery, and diseases of children, for the above appointment. The possession of the Diploma in Public Health, or its equivalent, would be considered an additional qualification for the office. The consent of the Ministry of Health has been obtained to the filling of this vacancy. Candidates already holding whole-time public health appointments will not be considered unless consent to apply has been obtained from the Ministry of Health. The officer appointed would be required to attend ante-natal and infant welfare clinics, and also to undertake certain administrative duties in the maternity and child welfare department under the general direction of the Medical Officer of Health. Although the duties would mainly be in the maternity and child welfare department, the successful candidate would be expected to undertake such general duties in the public health department as may be required from time to time by the Medical Officer of Health. The commencing salary will be at the rate of £700 per annum, rising, subject to satisfactory service, by annual increments of £50 to a maximum of £850. The successful candidate will be required to pass a medical examination, and to reside within the County Borough of Middlesbrough. The position is terminable by three months notice on either side. Applications to be sent to the Medical Officer of Health, Municipal Buildings, Middlesbrough, not later than Monday, October 29, 1945.—Preston Kitchen, Town Clerk, Municipal Buildings, Middlesbrough.

CITY OF MANCHESTER. Booth Hall Hospital for sick children (760 beds). RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the above-mentioned appointment which will become vacant on November 12, 1945, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts the appointment will be for a period of six months otherwise it will be for a period of twelve months. The basic salary for the appointment is £200 per annum with board residence and laundry in addition, subject to the Manchester Corporation conditions of service. A temporary cost-of-living wages addition is payable in addition to the salary stated. Applications are to be addressed to the Medical Superintendent, Booth Hall Hospital, Charlestown Road, Blackley, Manchester, 9, and must be received by him not later than October 31, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF BIRMINGHAM. Selly Oak Hospital (an acute general hospital of some 520 beds with an infirmary of 650 beds attached). JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A) at the above hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for six months, otherwise it will be for one year. The salary is at the rate of £200 per annum, plus residential emoluments. Applications should be sent to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than November 12, 1945.

BRITISH POSTGRADUATE MEDICAL SCHOOL (University of London).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE PHYSICIAN (A), the post becoming vacant on December 1, 1945. This includes practitioners liable to service under the National Service Acts who have not yet completed three months since date of qualification. The appointment is for six months. The salary is at the rate of £105 per annum, plus full residential emoluments.—Apply, The Dean, British Postgraduate Medical School, Ducane Road, W.12, before October 27, 1945.

ROYAL CANCER HOSPITAL (FREE) (Incorporated under Royal Charter), Fulham Road, London, S.W.3.—Applications are invited from qualified medical practitioners for the post of PART-TIME PHYSIOTHERAPIST to take charge of the Physiotherapy Department. The appointment in the first instance is a temporary one. Salary £250 per annum for two half-day sessions per week. The appointment will commence from January 1, 1946. Applications, to be made on a form which will be supplied by the Secretary, with copies only of not more than three recent testimonials, to be sent to the undersigned not later than the first post on Wednesday, November 14, 1945.—Victor H. Pinkham, Secretary.

IMPORTANT — All applicants should read the notice about qualifications required, etc., printed at the top of page 9

COUNTY BOROUGH OF READING. RESIDENT MEDICAL SUPERINTENDENT at Battle Hospital (583 beds) (temporary).—The Council of the County Borough of Reading invite, from registered medical practitioners, including those serving in H.M. Forces, applications for the temporary post of Resident Medical Superintendent of the above general hospital. The post is normally permanent but, in accordance with the Council's decision and the requirements of the Ministry of Health, is at present designated as temporary. The consent of the Minister of Health has been obtained to the proposed appointment. Candidates should have had wide clinical and administrative experience of general hospital work and possession of higher degrees will be considered an advantage. The salary, in accordance with the Askwith Scale, will be at the rate of £1,000 per annum, including therein emoluments valued at £200 per annum, rising by biennial increments of £50 to £1,100 per annum, together with the current cost-of-living bonus. If the Askwith scale be amended, the salary will be reviewed in the light of any such amendment. The post is subject to termination by three months' notice on either side and to the provisions of the Local Government Superannuation Act, 1937. The successful candidate will be required to pass a medical examination. Forms of application can be obtained on application to me. Applications, endorsed "Resident Medical Superintendent," should reach me not later than November 19.—G. F. Darlow, Town Clerk, Town Hall, Reading.

COUNTY OF DERBY. COUNTY MEDICAL OFFICER OF HEALTH.—The Derbyshire County Council invite applications from registered medical practitioners, including those now serving in His Majesty's Forces, for the permanent appointment of County Medical Officer of Health. Salary £1,500 per annum, rising by £100 per annum to £1,900 per annum, plus cost-of-living bonus, and a travelling allowance according to the Council's scale. Candidates must not only be qualified as prescribed by the Local Government Act, 1933, but must also possess administrative ability and a wide knowledge and experience of the organization of Public Health Services. The appointment will be subject to the provisions of the Local Government Superannuation Act, 1937. Conditions of appointment and form of application may be obtained from the undersigned, to whom applications must be delivered not later than Februray 20, 1946. Canvassing, directly or indirectly, will be a disqualification. The consent of the Minister of Health has been obtained to the making of the appointment.—H. Wilfred Skinner, Clerk of the County Council, County Offices, St. Mary's Gate, Derby

COUNTY BOROUGH OF STOCKPORT. Stepping Hill Hospital (480 beds). RESIDENT ASSISTANT MEDICAL OFFICER.—Applications are invited from duly qualified medical practitioners for the post of Resident Assistant Medical Officer (B2) (male or female) at the above hospital. Determinable by one month's notice on either side. Salary £350 p.a. (plus cost-of-living bonus), with board, residence and laundry. The person appointed will be required to devote the whole of his/her time to the duties of the office, which are mainly surgical. R and W practitioners holding A posts may also apply, when appointment will be limited to six months; otherwise not to exceed one year. Applications are to be sent, endorsed "Assistant Medical Officer."—J. Yule, M.D., D.P.H., Medical Officer of Health, Town Hall, Stockport.

COUNTY BOROUGH OF ROCHDALE. Marland Isolation Hospital.—Applications are invited from registered medical practitioners (male or female) for the post of RESIDENT MEDICAL OFFICER (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months and in any case will only be renewable for a further period of six months. The hospital has 120 beds, and the duties will include the visiting of the neighbouring Pulmonary Hospital (36 beds). Salary £225-£275 per annum plus bonus of approximately £29 per annum with full residential emoluments. Application forms may be obtained from the Medical Officer of Health, Public Health Offices, Baillie Street, Rochdale, and must be returned to him as soon as possible.—Harry Bann, Town Clerk.

COUNTY BOROUGH OF DERBY. Derby City Hospital. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it may be extended to twelve months. The salary is at the rate of £200 per annum with full residential emoluments, plus war bonus. The hospital is a 1A Casualty Hospital with a normal complement of 312 beds plus casualty beds, for acute medical and surgical cases, and with a large obstetrical department. Applications should be sent to the Medical Superintendent, City Hospital, Derby, as early as possible.—C. Ashton, Town Clerk, Derby.

CITY OF PLYMOUTH. Mount Gold Orthopaedic Hospital (120 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of ASSISTANT RESIDENT SURGICAL OFFICER (B2) at Mount Gold Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be renewable for a further period of six months, terminable by one month's notice on either side at any time. Salary is at the rate of £250 per annum, plus war bonus, with full residential emoluments. All other fees received by the Officer must be refunded to the Council. Married quarters are not provided. Preference will be given to applicants who have had some experience of orthopaedic and fracture work. The duties are in the orthopaedic and E.M.S. sections of the hospital Applications should be sent to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF SHEFFIELD. City General Hospital. SENIOR ASSISTANT MEDICAL OFFICER OBSTETRICAL (B1).—Applications are invited for the above appointment of Senior Assistant Medical Officer in the Obstetrical Department of the above hospital, which deals with approximately 2,000 confinements per annum. Applicants should have had postgraduate obstetrical experience. Suitably qualified R practitioners holding B2 appointments are invited to apply. Holders of B1 posts cannot be considered unless unfit for military service. Salary £350 per annum rising by £25 to £550, plus bonus and residential emoluments. Applications should be sent to the Medical Superintendent, City General Hospital, Sheffield, 5, as soon as possible.

COUNTY BOROUGH OF HALIFAX. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH for Maternity and Child Welfare (female).—Applications are invited from fully qualified medical women for the above appointment. Candidates already in whole-time Public Health employment by local authorities are not eligible. Salary scale £500 per annum, rising by annual increments of £25 to a maximum of £700 per annum. Commencing salary will be fixed in accordance with candidate's experience. The appointment will be terminable by one month's notice from either side. Applications must be received by the undersigned not later than the first post on November 2, 1945.—G. C. F. Roc, Medical Officer of Health, Public Health Department, Powell Street.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Newcastle General Hospital (900 beds). HOUSE SURGEON (B2) TO THE NEURO-SURGICAL DEPARTMENT.—Applications are invited from registered medical practitioners, male and female, for the above post, to become vacant on or about November 25, 1945, including R and W practitioners who now hold A posts. The appointment is tenable for six months and the salary is at the rate of £250 per annum plus cost-of-living bonus and full residential emoluments. Applications to be forwarded to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

CORNWALL COUNTY COUNCIL. TEMPORARY WHOLE-TIME ASSISTANT SCHOOL MEDICAL OFFICER.—Applications are invited from registered medical practitioners for the above appointment. Part of the duties will consist of work in connexion with the establishment of a Child Guidance Service in the county. Applicants should hold the Diploma of Psychological Medicine, and experience in child psychology will be an advantage. The salary scale is from £600 per annum, rising by annual increments of £25 to £800 per annum, and the successful candidate will devote the whole of his or her time to the duties of the office, under the direction of the county medical officer. Candidates already in whole-time Public Health employment by local authorities will not be eligible. There will be a travelling allowance in accordance with the county scale. The approval of the Minister of Health has been obtained to the appointment, and candidates should submit with their applications full information as to their liability for military service, medical fitness and position with regard to deferment. Applications endorsed Assistant School Medical Officer, should be forwarded to the County Medical Officer, County Hall, Truro, not later than October 31, 1945.—L P. New, Clerk of the County Council, Truro.

KENT COUNTY COUNCIL. County Hospital, Dartford (344 beds). TEMPORARY RESIDENT MEDICAL OFFICER (A).—Applications are invited from suitably registered medical practitioners of either sex for the above appointment. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months. Otherwise it will be for a period not exceeding one year. The salary is £200 a year, plus a temporary war addition of £29 19s. 7d., with full residential emoluments. Superannuation can be arranged and the successful candidate will be required to pass a medical examination. Applications should state the names and addresses of two responsible persons to whom reference may be made as to professional ability, and should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by October 30, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

EAST SUSSEX COUNTY COUNCIL. TEMPORARY ASSISTANT COUNTY MEDICAL OFFICER OF HEALTH.—Applications are invited for the post of whole-time temporary Assistant County Medical Officer from registered medical practitioners with experience in public health administration and possessing the Diploma of Public Health. The duties of the post will be mainly administrative in all branches of the Department. Commencing salary within the range of £700 to £900 per annum, rising by increments of £50, plus cost of living bonus (at present £59 16s. per annum). Travelling and subsistence allowances will be paid according to the County scale. The post will be subject to the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a satisfactory medical examination. The post is not one to replace a medical officer on war service and the approval of the Ministry of Health has been obtained to the making of the appointment. For the present, the Doctor selected for the post will not be free to apply for another appointment without obtaining permission to do so from the Ministry of Health.

Applications on a form to be obtained from the County Medical Officer of Health, County Hall, Lewes, accompanied by not more than three recent testimonials must be submitted to him not later than November 10, 1945.—H. S. Martin, Clerk of the County Council, County Hall, Lewes.

HERTFORDSHIRE COUNTY COUNCIL. The Lister Emergency Hospital, Hitchin, Herts (400 beds).—Applications are invited from registered medical practitioners for the following appointments:—

HOUSE PHYSICIAN (A) vacant November 3, 1945, and HOUSE SURGEON (A) vacant October 23, 1945. Salary at the rate of £150 per annum with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months.

HOUSE PHYSICIAN AND RESIDENTIAL ANAESTHETIST (B2) vacant November 3, 1945. Salary at the rate of £200 per annum with full residential emoluments. R practitioners holding A posts may apply. The appointment will be for a period of six months.

Applications should be sent immediately to Dr. P. J. W. Mills, Medical Superintendent.—P. Elton Longmore, Clerk of the County Council.

HEREFORDSHIRE COUNTY COUNCIL.—Applications are invited for a TEMPORARY WHOLE-TIME ASSISTANT MEDICAL OFFICER in the County Health Department. The duties will primarily consist of school medical examinations and maternity and child welfare work. Salary £600 by £25 to £700 per annum, plus wartime bonus, together with travelling allowance. Applicants (who should not be in a whole-time public health appointment) should apply at once to the County Medical Officer, County Offices, Hereford.

IPSWICH COUNTY BOROUGH COUNCIL. Borough General Hospital (normal beds 252).—Applications are invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had surgical experience. R practitioners holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £500 per annum, with full residential emoluments, and the appointment is subject to one month's notice on either side. Applications should be sent at once to the Medical Officer of Health, Elm Street, Ipswich.—A. Moffat, Town Clerk, Town Hall, Ipswich.

LANCASHIRE COUNTY COUNCIL. Public Health Committee. County Hospital, Whiston, Prescot, near Liverpool. RESIDENT MEDICAL OFFICERS (A).—Applications are invited from registered medical practitioners, male or female, for the above appointments, including practitioners within three months of qualification who are liable for service under the National Service Acts. If the successful applicants are liable under the National Service Acts the appointments will be for a period of six months, otherwise they may be extended for a further period of six months. Salary is at the rate of £120 per annum, together with full residential emoluments and a cost-of-living bonus. The persons appointed will be required to take up duty at an early date. Forms of application from the County Medical Officer of Health, County Offices, Preston, to whom all applications, accompanied by copies of not more than two recent testimonials, must be forwarded.—R. H. Adcock, Clerk of the County Council, County Offices, Preston.

SURREY COUNTY COUNCIL. Netherne Hospital, Coulsdon.—TEMPORARY ASSISTANT MEDICAL OFFICER (B1), male or female, required, £450 to £550 per annum, with full board and lodging, and an extra £50 for D.P.M. If married and living out the emoluments might be replaced by cash. Applicants must be prepared to interest themselves in active forms of psychiatric treatment though no previous experience is necessary. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 posts will be considered if rejected by the R.A.M.C. Apply to Medical Superintendent

IMPORTANT — All applicants should read the notice about qualifications required, etc., printed at the top of page 9

LANCASHIRE COUNTY COUNCIL. Biddulph Grange Orthopaedic Hospital.—Applications are invited from registered medical practitioners, male or female, for the appointment of RESIDENT JUNIOR HOUSE SURGEON (B2), now vacant, including R and W practitioners who now hold A posts. If held by a practitioner, male or female, who is liable under the National Service Acts, the appointment will be limited to six months, otherwise it will be for a period of twelve months. The salary is at the rate of £250 per annum, with full residential emoluments. Applications should be sent to Dr. F. Hall, School Medical and Child Welfare Department, County Offices, Preston, not later than November 3, 1945.—R. H. Adcock, Clerk of the County Council.

MIDDLESEX COUNTY COUNCIL.—JUNIOR ASSISTANT MEDICAL OFFICER (B2, resident) (male) required for medical duties at HILLINGDON COUNTY HOSPITAL, Nr. Uxbridge, Mx. Applications invited from registered medical practitioners including R practitioners who now hold A posts. Salary £250 p.a. plus war bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties such as Council may require under supervision of medical director. Appointment, subject to medical exam. and one month's notice, is for six months, with possibility of extension to twelve months (except R practitioners). Post vacant early November, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—CASUALTY OFFICER (B2, resident) (male) required at HILLINGDON COUNTY HOSPITAL, Nr. Uxbridge, Mx. Applications invited from registered medical practitioners, who have held house appointments and had good all-round experience (including R practitioners who now hold A posts). Salary £350 p.a., plus war bonus (now £60 p.a., proportion only in cash). Board, lodging, and laundry. Whole-time duties under medical director will include dealing with casualties and admissions to hospital and such other duties as may be required. Appointment, subject to medical exam. and one month's notice, is for six months, with possibility of extension to twelve months (except in case of R practitioners). Post vacant early November, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

Appointment, subject to medical exam. and one month's notice, is for six months, with possibility of extension to 12 months (except in case of R practitioners). Post vacant December 1, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date October 27, 1945. —C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

SURREY COUNTY COUNCIL. Public Health Department. St. Luke's Hospital, Guildford (500 beds).—Applications are invited from registered medical practitioners for the appointment of TEMPORARY ASSISTANT SURGEON (B1). Candidates must possess a higher surgical qualification, and must have had considerable experience of general surgery. Suitably qualified R and W practitioners now holding B2 posts are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The salary is at the rate of £800 p.a., plus full residential emoluments or £125 p.a. in lieu. The appointment is temporary in the first instance, and is subject to one month's notice on either side, and any Local Government Superannuation rights will be preserved. At a later date the permanent appointment will be readvertised. Applications to the County Medical Officer, Kingston-upon-Thames, by October 24, 1945.

SURREY COUNTY COUNCIL. Kingston County Hospital, Wolverton Avenue, Kingston-upon-Thames (approx 400 beds). RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the appointment of temporary Resident Surgical Officer (B1) to the above acute general hospital. Applicants should preferably possess a higher surgical qualification. Salary £550 per annum, plus war bonus, and full residential emoluments. Suitably qualified R and W practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been already discharged from military service, or have been rejected by the R.A.M.C. The appointment is for a period not exceeding three years, and is subject to one month's notice on either side, but Local Government Superannuation rights will be preserved. Apply to the Medical Superintendent at the hospital by November 24, 1945.

STAFFORDSHIRE COUNTY COUNCIL. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER.—Applications are invited from medical men and women for the abovementioned temporary post, and preference will be given to those who have held residential hospital appointments and who have the Diploma of Public Health. Officers already occupying full-time public health appointments with local authorities are not eligible to apply, and, in any case, intending candidates must ascertain if they are free to take up this class of employment. The candidate appointed will work under the direction of the County Medical Officer, and the duties will include school medical and maternity and child welfare work. The salary will be at the rate of £600 per annum, rising by annual increments of £50, to £800 per annum, plus war bonus. The candidate appointed will be required to provide a motor car and will receive allowances according to the County Council scales. The appointment will be subject to three calendar months notice in writing on either side. Forms of application may be obtained from the undersigned, and should be returned, accompanied by copies of not more than three testimonials, by the first post on October 27, 1945.—T. H. Evans, Clerk of the County Council, County Buildings, Stafford.

SURREY COUNTY COUNCIL. St. Luke's Hospital, Guildford (450 beds). RESIDENT ASSISTANT MEDICAL OFFICER (B1).—Applications are invited from registered practitioners, male and female, for the appointment of Resident Assistant Medical Officer (B1). The post is temporary, and is subject to one month's notice on either side, but any Local Government Superannuation rights will be preserved. Suitably qualified R and W practitioners holding B2 appointments may apply. Applications from R practitioners holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Commencing salary according to experience at a point on the grade £350 by £25 to £450 per annum, plus full residential emoluments and war bonus. Applications to the Medical Superintendent by October 24, 1945.

ALBERT DOCK HOSPITAL, Alnwick Road, E.16. HOUSE OFFICER (A) including duties of CASUALTY OFFICER required as from November 1.—Applications are invited from registered British practitioners including practitioners within three months of qualification who are liable to service under the National Service Acts, 1939-41. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary at the rate of £150 per annum with full residential emoluments. Applications to be sent immediately to the undersigned.—F. A. Lyon, Administrator and Secretary, Seamen's Hospital Society, Greenwich, S.E.10.

AYRSHIRE CENTRAL HOSPITAL, Irvine. RESIDENT ANAESTHETIST (B1).—Applications are invited from female medical practitioners for the above appointment at the maternity section of the above hospital (84 beds). Suitable qualified W practitioners holding B2 or B1 appointments may apply, but they must have obtained the consent of the Scottish Central Medical War Committee to their application. The person appointed will work under the general supervision of the county obstetrician. Preference will be given to a candidate holding a diploma in anaesthetics. The salary is £400 by £25 to £600, with war bonus and full residential emoluments. The post is within the authorized establishment but the initial appointment will be on a temporary basis subject to review later. Applications stating former general experience and experience in anaesthetics should be made not later than November 3 to the County Clerk, County Buildings, Ayr.

ALTRINCHAM GENERAL HOSPITAL, near Manchester (100 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A). THE CHILDREN'S HOSPITAL, King Edward VII Memorial, Birmingham, 16. ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Assistant Resident Medical Officer (B2), vacant November 15, 1945, including R and W practitioners who now hold A posts. The salary is at the rate of £250 per annum, with full residential emoluments. If held by an R practitioner the appointment will be limited to six months; otherwise it will be for one year. Applications should be sent to the undersigned by October 31.—Arnold Tunstall, House Governor.

THE GUEST HOSPITAL, Dudley (the resident staff consists of a resident surgical officer and three house surgeons).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R or a W practitioner, the appointment will be limited to six months. Salary at the rate of £200 per annum, with full residential emoluments.—H. Raymond Hurst, House Governor and Secretary.

VICTORIA HOSPITAL, Accrington.—Applications are invited from registered medical practitioners, male or female, for the post of HOUSE SURGEON (B2), including R and W practitioners who now hold A posts. Appointment will be for a period of six months. Salary at the rate of £200 per annum, with full residential emoluments. Applications to be sent to P. D. Wadsworth, Hon. Secretary.

WEST HAM HOSPITAL FOR NERVOUS AND MENTAL DISORDERS, Goodmayes, Ilford, Essex.—Applications are invited from medical practitioners including R and W practitioners holding B2 posts for the post of TEMPORARY ASSISTANT MEDICAL OFFICER (B1). The hospital is situated near London and facilities will be granted for postgraduate study. The salary commences at £350 per annum, plus war bonus, and with full residential emoluments. An additional £50 per annum will be paid if in possession of the D.P.M. R practitioners holding B1 posts and rejected by the R.A.M.C. may also apply. Applications in writing to be sent to the Medical Superintendent immediately.

WORTHING HOSPITAL. TEMPORARY OPHTHALMIC SURGEON.—Applications are invited for the post of Temporary Ophthalmic Surgeon. Duties include operations on In-patients and attendance at Out-patient Clinics. The post will be reviewed in about one year in accordance with the policy of the B.M.A. Applications should be sent to the undersigned not later than Friday, November 2, 1945.—A. V. Oakton, House Governor.

VICTORIA HOSPITAL, Blackpool (normal complement 200 beds, war-time complement 500 beds).—Applications are invited from registered medical practitioners, male or female, for the following appointments (B2) now vacant, including R practitioners who now hold A posts:

(1) HOUSE SURGEON to Orthopaedic Department and Surgical Unit 1.
(2) HOUSE SURGEON Eye, Ear, Nose and Throat Departments.

The appointments are for a period of six months and the salary is at the rate of £200 per annum with full residential emoluments, plus £150 per annum in the case of the successful applicants being Medical Officers released from H.M. Forces who desire postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications are also invited from registered medical practitioners male or female, for the appointment of RESIDENT ANAESTHETIST (B2), to become vacant shortly. R and W practitioners who hold A posts may apply. The appointment is for a period of six months. Modern equipment is provided, and there are facilities available for a candidate studying for the Diploma in Anaesthetics. Salary is at the rate of £300 per annum, with full residential emoluments, plus an additional £50 if the successful applicant is a Medical Officer released from H.M. Forces who desires postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications are also invited from registered medical practitioners for the appointment of RESIDENT SURGICAL OFFICER (B1). Preference will be given to candidates holding the Diploma F.R.C.S. R and W practitioners who now hold B2 posts may apply. Applications from R and W practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. The appointment will be for a period of twelve months. Salary is at the rate of £400 per annum with full residential emoluments, plus £150 per annum in the case of the successful applicant being a Medical Officer released from His Majesty's Forces who desires postgraduate education and rehabilitation as recommended by the Ministry of Health.

Applications for each post should be sent immediately to—Walter R. Smith, General Superintendent.

WILLESDEN GENERAL HOSPITAL, Harlesden Road, N.W.10.—Applications are invited for the following post: SENIOR CASUALTY OFFICER AND FIRST ASSISTANT TO THE FRACTURE CLINIC (B1), F.R.C.S. (England) preferred. This post is suitable for candidates intending to specialize in fractures or industrial medicine. R and W practitioners now holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Whole-time post, salary £550 per annum, resident. Applications giving names of three referees to be forwarded to the undersigned, from whom copies of the regulations can be obtained. Applications will be received up to November 30, 1945.—J. N. Drake, Secretary.

WREXHAM AND EAST DENBIGHSHIRE WAR MEMORIAL HOSPITAL, Wrexham.—Applications are invited from registered medical practitioners, male and female, for the following six months' appointments:

RESIDENT HOUSE SURGEON (B2) to commence immediately. Salary is at the rate of £250 p.a., with full residential emoluments. R practitioners holding A posts may apply.

RESIDENT HOUSE SURGEON (A) to commence immediately. Practitioners within three months of qualification who are liable to service under the National Service Acts are eligible to apply. Salary at the rate of £200 p.a., with full residential emoluments.

Applications to Leslie Spencer, Secretary.

WESTERN INFIRMARY OF GLASGOW (Incorporated).—The Managers invite applications for the following posts:

TWO ASSISTANT PHYSICIANS.
FOUR ASSISTANT SURGEONS.

Applications to be sent to the undersigned. In order to allow members serving in H.M. Forces to apply, the date for receiving applications has been extended to February 20, 1946.—J. Matheson Johnston, Secretary and Treasurer, 87, Union Street, Glasgow, C.1.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant immediately, whose main duties are in the Eye, Ear, Nose and Throat Department (37 beds with busy Out-patient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. This post is recognized for D.O.M.S. and D.L.O. examinations. Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary.

MASTER OF MIDWIFERY
of the
SOCIETY OF APOTHECARIES OF LONDON
(M.M.S.A.)

The Master of Midwifery is designed to give evidence of intensive study and practical experience in *Ante-natal Care, Midwifery, and Infant Welfare* and their relation to *Hygiene and Preventive Medicine.* The possession of this Diploma will prove of value in private practice and also to candidates for appointments involving the special work described in the preceding paragraph. The tests imposed are stringent; the Examination, written, oral, and clinical demands thorough and detailed knowledge gained by practical experience, and constitutes a definite endeavour *to combat Maternal and Infant Mortality.* Examinations are held twice yearly, in the months of May and November. Regulations and forms of application for admission to the Examination may be obtained from the Registrar, The Society of Apothecaries, Black Friars Lane E.C.4.

THE EXAMINING BOARD IN ENGLAND
by the
ROYAL COLLEGE OF PHYSICIANS OF LONDON and the
ROYAL COLLEGE OF SURGEONS OF ENGLAND

Notice is hereby given that the Examination for the following Diplomas will commence on the dates stated below:

Diploma in Anaesthetics, Monday, November 19

Diploma in Laryngology and Otology, Monday, December 3.

Diploma in Psychological Medicine, Monday December 3.

Candidates who have complied with the necessary requirements, and who desire to present themselves for Examination, must apply in writing to the Secretary, Examination Hall, 8/11, Queen Square, London, W.C.1, at least twenty-one days before the date of the Examination, transmitting at the same time such certificates as may be required by the Regulations of the Board together with the full amount of the fee for the part or parts of the Examination for which they desire to enter (D.A.—£6 6s., D.L.O. and D.P.M.—£6 6s for each part).

Applications for Part II are due at the same time as for Part I. HORACE H. REW, Secretary.

FOR SALE, PRACTICE or HALF SHARE partnership, in progressive North Lancashire town, hospital appointments, receipts £4,000, preliminary assistantship if desired, car and house available.—Box 2796, B.M.J.

FOR SALE, well-established MEDICAL PRACTICE in populous area Glasgow, with or without suitable house. Panel list 1,600.—Apply Crawford, Herron, and Cameron, Solicitors, 257, West George Street, Glasgow, C.2.

FOR SALE woman's well-established, expanding country PRACTICE, Midlands, panel 1,300 increasing, takings £2,000 (chartered accountant's figures), premium 1¼ years' purchase, excellent freehold house.—Box 2763, B.M.J.

FOR SALE PRACTICE and 11-roomed freehold HOUSE, busy working class district, N. London, panel about 900, neglected owing to army service, price £3,800 inc. or near offer.—Box 2548, B.M.J.

FOR SALE, nr. Manchester, old-established DOUBLE PRACTICE. Panel 3,570. Gross receipts £5,200. House for sale. Suit two doctors.—Box 3332, B.M.J.

LANCS. COAST, for sale large family PRACTICE, small panel, fine detached residence with separate entrance to consulting suite, large garden and garage on rental, cars, fittings, and furniture if required, good introduction, no agents, banker's reference required.—Box 2844, B.M.J.

LONDON SUBURB.—First-class mixed PRACTICE for sale. Gross receipts over £2,000, steadily increasing, developing area. Economic semi-detached house for sale. Principals only.—Box 3319, B.M.J.

LANCASHIRE, urban district and surrounding rural areas. Panel and private PRACTICE. Old-established. Average receipts £1,100. Panel patients 700. House for sale. The practice is offered at one year's purchase and the house for £2,000. Reason for disposal vendor retiring.—Box 3297, B.M.J.

LANCS. seaside resort, PRACTICE for sale, established 10 years. Panel 560. Receipts 1944 £660. Large detached bungalow to rent £52. Scope. Suit man or woman. Premium £800.—Box 3275, B.M.J.

MEDICAL PRACTICE or partnership, suburban type, wanted by experienced M.D. Age 51. Married. Good panel. House or flat essential. Capital available. Own car.—Box 3075, B.M.J.

NUCLEUS, long-established PRACTICE. N.W. London, excellent prospects for expansion, £500 or near offer, particulars.—Box 3350, B.M.J.

OLD-ESTABLISHED unopposed PRACTICE in Midlands for sale. Delightful country district. Death vacancy. Would suit semi-retired Doctor. Excellent house (freehold), includes surgery, 3 public rooms, 5 bedrooms, conservatory, bathroom (hot and cold), electric lighting, large garden, two garages, telephone, etc. Immediate occupation.—For further particulars apply Messrs Osborn & Mercer, 28B Albemarle Street, Piccadilly, W.1.

RURAL PRACTICE of over £1,000. Excellent house at valuation for sale.—Box 3278, B.M.J.

WEST RIDING PRACTICE for disposal. Average receipts 1944 £5,300. Panel patients 3,700. House on rental £60, which has four bedrooms, outside surgery. Orchard and land, two garages, stabling and outhouses. Premium 1½ years' purchase.—Box 3296, B.M.J.

SURGEON LIEUTENANT-COMMANDER, R.N.V.R. (Group 20), M.B., B.S., London, aged 32, married, qualified 10 years, requires PRACTICE or PARTNERSHIP in South of England on release, capital available.—Box 2788, B.M.J.

DIETETIC, DISPENSING, TYPING, SECRETARIAL, RECEPTION, ETC.

None of the vacancies for women advertised in these columns relates to a woman between the ages of 18 and 40 inclusive, unless she is exempted from the provisions of the Control of Engagement Order, 1945, or the vacancy is for employment excepted from the provisions of that Order.

WANTED, SECRETARY-BOOKKEEPER for busy practice in the Midlands, dispenser kept.—Write giving full particulars to Box 3299, B.M.J.

WANTED DISPENSER, with some knowledge of bookkeeping, for partnership of two doctors in N. Wales area. Salary, £5. No Sunday surgery. Welsh-speaking an asset, but not essential. Preference to experience and age.—Box 3080, B.M.J.

CROYDON AREA, Lady (Hall Certificate), requires PART-TIME dispensing or bookkeeping and secretarial work. Own typewriter.—Miss Edwards, 32, Whitgift Avenue, Croydon. Telephone 6295.

DOCTOR'S SECRETARY wishes situation. Willing to work in any area. Replies from Scotland welcomed.—Box 3046, B.M.J.

DISPENSER-BOOKKEEPER WANTED November 1 for general town practice.—Apply giving particulars to Dr. C. B. Jones, 61, Newmarket Road, Cambridge.

LADY, aged 33, seeks post as RECEPTIONIST to doctor. London area West End preferred.—Box 3284, B.M.J

EX-A.A.G.B., driver—welfare, nursing experience, seeks post CHAUFFEUSE SECRETARY to psychologist or doctor. Willing work hard, any hours, interesting progressive job. London area.—Box 3283, B.M.J.

IMPORTANT MEDICAL ORGANIZATION requires INTELLIGENT WOMEN with good office experience, shorthand-typing necessary. Salary according experience. Only keen progressive workers wanted.—Box 3347, B.M.J.

LADY SECRETARY, many years' experience, seeks post with doctor in London. Good typist, also qualified and experienced in DISPENSING.—Box 3331, B.M.J.

LADY DISPENSER WANTED, country town—Write stating age and full particulars to Drs. Duncan and Smith, 15, Bridge Street, Evesham, Worcestershire.

MALE RECEPTIONIST or similar duties in London. Experience 3 years hospital nursing, also works ambulance room. Part-time preferred. Remuneration secondary consideration.—Box 3285, B.M.J.

PRIVATE SECRETARY seeks employment with doctor or dentist, preferably West End London area.—Box 3330, B.M.J.

PERSONAL SECRETARY, senior, experienced and fully trained; accurate with figures. Free now.—Box 3298, B.M.J.

SECRETARY-DISPENSER required.—Dr. Cullen, 69, Sheep Street, Northampton.

SECRETARY-RECEPTIONIST required immediately for partnership, South Coast.—Dr. Kerr, 24, Albert Road, Bexhill.

WOLVERHAMPTON. Lady desires PART-TIME SECRETARIAL WORK to doctors. Temporary or permanent. Typist. Accustomed to responsible position.—Box 3282, B.M.J.

MISCELLANEOUS

WANTED, *Journal of American Medical Association*, 1940, vol. 114, Nos. 19, 20, 21, and index; 1941, vol. 116, Nos. 10, 11, and index; 1942, complete set; 1943, complete set; 1944, complete set. 1945, all issues to July 7.—Particulars to Box 3128 B.M.J.

FOR SALE, PORTABLE X-RAY APPARATUS by Alfred Cox, with all accessories including screens.—A. C. Pantostat, Hanovia Home Sun. Seen London. S.W. Write B.M./A.G.G.W.: London, S.W.1.

MICROTOME. Minot rotary, with accessories Cuts sections 1 to 25 μ, £60. Barnard's microphotographic apparatus £35.—Box 3287, B.M.J.

SALE, 4 pre-war SURGICAL WHITE COATS Excellent condition. Fit 5 ft. 9 ins. Chest 38 to 40 ins. £3 3s. each. The lot £12.—W. J. E. Dawson, Ballymoyer, Whitecross, Co. Armagh, N Ireland.

URGENTLY WANTED, HALF SET BONES, in good condition, including skull.—Box 3334, B.M.J.

FOR SALE, Maingot's *Post-graduate Surgery*, 3 volumes; Watson Jones' *Fractures*, 2nd Edition; Ballenger's *Ear, Nose, and Throat*, 7th Edition Offers singly or for the lot.—Box 3333, B.M.J.

WANTED, SECOND-HAND SURGICAL INSTRUMENTS, furniture for surgery and consulting room, blood pressure apparatus, electric diagnostic sets, ophthalmoscopes, auriscopes, microscopes, etc —Particulars to A. Fleming & Co (Succrs.), 51, Mortimer Street, London, W.1. Telephone: Mus 6292.

WANTED TO PURCHASE.—Cameras, enlargers and all photographic apparatus, exposure meters, tripods, etc., microscopes, binoculars, cine cameras, and projectors. Prompt cash and high prices offered.—Wallace Heaton, Ltd., 127, New Bond Street, London, W.1.

COMPRI-VENA (1937), Ltd.—The care and after care of Varicose Veins.—In the treatment of Varicose Veins where leg support is prescribed Compri-Vena gives meticulous attention to instructions. They will gladly supply particulars of Surgical Stockings and the service they provide.—38, South Molton Street, W.1. MAYfair 0732.

DOCTORS' WATCHES.—Franklands can still supply Gold Watches. Write for particulars.—E. J. Frankland & Co., Ltd., Marle House, South Godstone, Surrey; or London Showroom, New Bridge Street House, 30-34, New Bridge Street, Ludgate Circus, E.C.4

"EVERBRITE" RECHARGEABLE TORCH Recharged at home from your mains. No battery required. Several hours continuous light. Thousands in use. Fully guaranteed. The "King of Pocket Lamps." Direct or from dealers. Send for interesting leaflet K. 150.—Runbaken Electrical Products, Manchester, 1.

ENVELOPE RESEAL LABELS 250 3s.; 1,000 9s. 6d. Medical printing. Pre-war stationery Samples Stamp.—Hodgson (Dept. B) Printer, Bradford.

MEDICAL PHOTOGRAPHS and drawings for illustration, records, etc.—Write for particulars. Eric O. Sonntag, 159, Bickenhall Mansions, Baker Street, London, W.1. WELbeck 8860.

TOILET ROLLS (Thintex Tissue) for Sale, prices carriage paid and including cost of cartons, 6 dozen £4 6s. 4d.; 1 gross £8 12s. 8d., early delivery in rotation, cash with order to J. Gordon (Dept. 7), 33, Connaught Gardens, Muswell Hill, London. N.10.

WIGMORE'S, LTD., 63 Baker St., London, W.1 (Welbeck 5668). DISPENSING OPTICIANS by appointment to Western Ophthalmic Hospital, Marylebone Road, London, N.W.1. Doctors' prescriptions accurately dispensed.

MOTOR CARS

FOR SALE, 1934 MORRIS 10 4-door Saloon. Insured till October, 1946. Good condition. £175 or near offer.—Phone: Belfast 116328.

JOWETT 8-h.p. 1939 Saloon. 23,000 miles 40 m.p.g. New tyres. Perfect working order Taxed and Insured. £250.—Box 3337, B.M.J.

Founded 1892. THE LONDON AND COUNTIES Assets exceed £100,000.
MEDICAL PROTECTION SOCIETY
Members receive advice and assistance in all matters affecting the practice of their profession and are afforded COMPLETE INDEMNITY against costs and damages in cases undertaken on their behalf.
Subscription £1. No entrance fee to those joining within twelve months of registration. Entrance fee, 10/-.
Full Particulars from the Secretary, VICTORY HOUSE, LEICESTER SQUARE, W.C.2. Gerrard 4553 and 4814.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd., The Gainsborough Press, St. Albans. Printed in Great Britain. Entered as Second Class at New York, U.S.A., Post Office.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY OCTOBER 27 1945

HEARD AT HEADQUARTERS

The Returning Doctor

A glance at the galley proofs of *The Returning Doctor* was enough to show that this document, which will be placed, through the dispersal centres, in the hands of all practitioners returning to civil life from the Services, is another excellent piece of B.M.A. work. It has been most painstakingly compiled and every bit of information which could be of use to the demobilized doctor has been gathered in; and, what is more, has been so tabulated that it needs no long search to find it. Seldom can so much detail have been compressed within so small a space. There is hardly a question the returning practitioner can ask which will not be answered somewhere in this compilation, and answered with the necessary particularity, down to names and addresses, dates and £ s. d. If he wants to know where to look for refresher courses, what is likely to befall him in the different paths of private practice or public appointment, what obligations insurance practice entails, these and a hundred other things, there they all are in black and white. *The Returning Doctor* will be ready by the end of the month.

The American Doctor Back Home

Our colleagues across the Atlantic have a rather different, and in some ways a more complicated, problem to face in the resettlement of demobilized practitioners. The British practitioner is at least fortunate in having a licensing system which covers the entire country. He would feel a sense of grievance if, transferring himself from Cornwall to Cumberland, he had to go through a whole lot of formalities and the continuance of his right to practise depended on the discretion of some board or other. One of the most frequent questions which returning American practitioners are asking concerns their eligibility for licence to practise in States other than those in which they were licensed originally. Some States have no reciprocal relations; this is true of Florida, Idaho, Massachusetts, Rhode Island. Efforts are being made by the Department of Justice in the U.S. Government to facilitate the inter-State licensing of released officers. It is not possible to predict the success of this proposed legislation, but there is reason to believe that there will be changes in some States relating to reciprocity and the licensing of demobilized medical officers. As things are, the reciprocity and endorsement arrangements in the forty-eight States appear like a jigsaw puzzle, probably beyond the ability of any non-American to understand.

Local Information

Meanwhile the information which the returning American practitioner is receiving is as detailed as anyone could wish. An actively functioning unit of the American Medical Association has set itself the enormous task of giving information to applicants concerning the county in which they contemplate settling. The county has been taken as the unit, and there are, for instance, ninety-nine counties in the State of Iowa, and sixty-two in the State of New York. The information includes full particulars about the hospitals in the county, the public health and other medical facilities, the number of existing doctors, separated into five age groups, the principal occupations of the inhabitants, the climate, the social conditions, the state of the towns, the schools, the volume of retail sales (which are said to be an indication of the wealth of the county), the number of "resident telephones" (presumably another indication), the miles of highway, the number of dwelling units and the average monthly rentals, also the names and addresses of the president and secretary of the local medical societies. All this is set out on a sheet for each county, and it will not be the fault of his guides if the newly settling practitioner does not know all about his neighbourhood.

Disablement Advisory Committees

Medical members are now being appointed to the Disablement Advisory Committees which are being set up under the Act passed last year. The job of the committees is to advise the Minister concerning the employment of disabled persons. Each committee consists of representatives of employers and workers in the district, with other knowledgeable persons, including, on each committee, a medical practitioner The nominations of such practitioners are in future to be sought from or submitted to the Local Medical War Committee. It seems that no fee is payable to the medical members, though out-of-pocket expenses may be claimed.

In each of these areas also there is being set up an advisory panel to consider applications on behalf of disabled persons for entry on the register. It is expected that at first these panels will have a heavy task, and that weekly meetings will be necessary. The medical practitioners who are members of the panels will have the duty of interpreting the medical evidence and advising as to the action to be taken. Sometimes they may recommend resort to a specialist, but they will not themselves have the job of examining applicants. A doctor nominated to serve on the panel may, if he wishes to claim it, be paid a sessional fee of one and a half guineas. "If he wishes to claim it" conveys the suggestion that he may undertake the work without payment. It is not a very happy situation to leave it to the choice of any holder of office whether his office should be a paid one or not.

One of the Veterans

Practitioners who have served on Panel Committees or Insurance Committees since the very beginning of National Insurance must in the nature of things be getting rather few, though at Headquarters we meet them from time to time. One fine record of such service has been brought to a close by the retirement of a Leicestershire veteran, Dr. J. H. Donnell, of Station Road, Hinckley. Dr. Donnell has just retired from practice and is resigning his membership of the Leicestershire Insurance Committee, of which he was, so to speak, a founder member. He has been honorary secretary of the Panel Committee for twelve years, as well as chairman of the Local Medical War Committee. He has had a letter of congratulation on his long term of service from Dr. E. A. Gregg, the chairman of the I.A.C. Dr. Gregg is one of the veterans himself. If he was not on the London Panel Committee from the very beginning, he was on it, and its vice-chairman, very shortly afterwards.

A SERVICE FOR DOCTORS AND PATIENTS

The problem of disposing of patients needing immediate hospital treatment is one which has exercised doctors in both town and country for many years. In 1938 King Edward's Hospital Fund for London determined to try and solve it for the London area and initiated, after discussions with the Voluntary Hospitals Committee, the Voluntary Hospitals Emergency Bed Service. The service opened in June, 1938, and in its first year dealt with 7,859 cases. The rapid increase in the number of calls in the first half of 1939, when the cases dealt with were 5,131, showed that the service was much appreciated by the doctors.

At the outbreak of war the service was interrupted for three weeks when the staff were loaned to the Ministry of Health to help organize the E.M.S. At the end of three weeks the service was reopened. Records of the period between 1940 and the end of the flying-bomb attacks show that the calls on the service increase rapidly when conditions in London approximate to normal; the cases dealt with in the first half of 1945 were higher than in any other half-year since July, 1940. It seems that with stabilization of the population of London and increased activities of hospitals in the Metropolitan area the scope of the service is bound to increase.

The system on which the service operates has now seven years' experience behind it, and has become very efficient. Doctors who in the past have waited, weary and exasperated, beside a telephone at their own or at a patient's house will be surprised to know that the average number of telephone calls to hospitals for each admission has never exceeded 1.7 in any one year, and has at times been as low as 1.5. The flexibility of the arrangements is well illustrated by an incident of the flying-bomb period when the building which housed the service was damaged by a flying bomb two minutes after a call came through. The staff on duty, in spite of minor injuries, moved down to the emergency telephone in the basement, booked a bed at a hospital, arranged for the ambulance to collect the patient, and rang the doctor back to say that all arrangements had been made—all within 20 minutes of receiving the call. Owing to the nature of its work the service provides a comprehensive view of the hospital needs of the Metropolitan area. It has constant evidence of the acute shortage of accommodation for the chronic sick and aged persons, who, although not acute emergencies, need either hospital treatment or institutional care.

The problem of waiting-lists is another matter in which it has been suggested that the service might be able to help. It is necessary to ensure free choice of location and medical attention for the patient, and to preserve the healthy tradition that a hospital which has advised treatment through its expert medical staff is responsible for carrying that treatment through to a conclusion. The problems are bigger than but not different in kind from those which have already been solved successfully, and a service which has already gained confidence among doctors and hospitals may prove to be the means of solving another of their joint difficulties.

It is important that doctors in the Metropolitan area should know what the service has to offer. As it is in constant telephone communication with hospitals in London it is able to arrange for the admission of patients with the least possible delay. It provides an ambulance when necessary, and informs the doctor by telephone when arrangements are completed. The doctor is always asked if he has a preference for any particular hospital, but he will often leave the choice to the E.B.S. The service is open from 9 a.m. to 10 p.m. daily. Before the war it used to be open all night, and it is hoped to resume the all-night service when the labour position becomes easier. It appears in the telephone book under the heading of Emergency Bed Service and its telephone numbers are City 2162 and Clerkenwell 6571.

EUGENICS AND POST-WAR RECONSTRUCTION

PRESIDENTIAL ADDRESS TO SURREY BRANCH

Dr. J. H. Thompson, President of the Surrey Branch of the British Medical Association, devoted his address from the chair at the annual general meeting of the Branch, held at Warlingham Park Hospital, Croydon, to the subject of eugenics and social reconstruction. He reminded his audience of three outstanding facts: that there were now fewer people under 20 than at the end of the last war, that we were not up to replacement level in respect of the birth rate, and that there was in this country a population of 350,000 feeble-minded, many of whom would go on breeding more feeble-minded children.

After outlining the work of Galton, Mendel, and others, he said that the laws of inheritance obviously applied with equal force to all orders of living things. What man had done in the case of domesticated animals and cultivated plants he could do for himself and his kind if he so wished. The laws of heredity could be relied on with complete confidence. To a very considerable extent mental characters were governed by hereditary factors. Was it not therefore worse than folly to allow parents with bad natural qualities to have more children than those better endowed, or indeed to allow them to have children at all?

The advance of medicine and hygiene had had certain dysgenic effects by enormously diminishing selective mortality in all classes and improving the chances of weaklings to survive and leave descendants. War was a more conspicuous dysgenic factor because it enlisted the strongest and most healthy, and it was often the best who fell. The steady fall of the birth rate during the last 70 years could for the most part be traced to economic insecurity, and it obtained throughout almost the whole of society. This decline in numbers must inevitably be associated with a certain disastrous fall in quality. The heavier fall in the birth rate had occurred amongst those sections of the population who, judged by accepted standards, were the most highly endowed mentally, while a higher birth rate remained amongst the relatively defective and the less well endowed.

Differential Fertility

This differential fertility also seemed to be associated with the wider spread of contraceptive methods among the more intelligent. Statisticians said that out of this general fall in population, the four most intelligent people in every 100 would be replaced by three in the next generation, and the four dullest would be replaced by five. Members of the medical profession themselves were amongst the classes who showed low fertility. Instead of the average of 3 which was necessary for replacement, their average was 1.92.

In so far as the fall in the birth rate was due to artificial limitation of the size of families owing to financial considerations, the Government's social security scheme, including maternity benefit and family allowances, should go some way to meet the difficulty. The factor which made people limit their families was the fear of being poor—in other words, fear of being unable to live up to the standard customary in their class, and this applied in every rank of society. The family allowance such as the Government proposed would have no effect with the well-to-do; if the birth rate for this class was to be raised at all the allowances must be higher where the standard of life was higher. He suggested that in addition to the flat-rate family allowance scheme there should be a graded scheme so that different economic sections could, through some form of mutual insurance, receive children's allowances in proportion to their expenditure.

Negative Eugenics

Negative eugenics (Dr. Thompson continued) was relatively more simple. The segregation of mental defectives had the support of practically all intelligent people. Heredity could be regarded as a contributory cause in mental diseases and as playing no small part in criminal behaviour. The son of a criminal was ten times as likely to commit a crime as the son of honest parents. The ideal plan would be for every young person when accused of a crime to have his mental state examined, and if he was found definitely feeble-minded he should be certified.

But the problem of the feeble-minded was far more urgent, and was greatest in the upper grade of the feeble-minded, for the lower grade—idiots and imbeciles—scarcely ever constituted a social problem, the defect being so pronounced as automatically to call for custodial care. It was from the upper grades that the criminal and prostitute classes were recruited.

Segregation was the accepted method of treatment, though expensive and unsatisfactory in some respects. Sterilization had often been discussed, but had made little headway in this country. It would be a substantial step forward, and he thought that the principle which had sustained compulsory vaccination would be broad enough to cover cutting the Fallopian tubes. Sterilization was not punitive, but a strictly protective measure. Segregation, however, was more likely to prove acceptable as an immediate policy while the controversy over sterilization continued.

Finally, Dr. Thompson pleaded for a wider general knowledge of eugenics, saying that it was only through a rational eugenics programme that any reasonable prospect could be seen of future generations being born with higher capacities. If such a programme had been in effect for a few generations such dangers as hereditary insanity and feeble-mindedness would have been greatly diminished and the present wrong kind of differential birth rate corrected.

SCOTTISH ASSOCIATION OF INSURANCE COMMITTEES

The annual conference of the Scottish Association of Insurance Committees, held in Edinburgh on Sept. 28, gave a unanimous welcome to the proposals to secure a comprehensive medical service for the people, but expressed the opinion that the first step to be taken should be by way of extension of medical benefit under National Health Insurance, including dependants of insured persons and others of like economic status, and that medical benefit should be widened to include consultant and specialist services and diagnostic, nursing, and hospital facilities. The Association was not in favour of a whole-time salaried medical service, believing this to be inconsistent with the principle of free choice of doctor and the personal relationship between doctor and patient. The conference defeated a proposal from Glasgow that, provided the scheme for a National Health Service is available to the whole population, general practitioners serving under the scheme should not be allowed to practise privately. It carried unanimously a resolution urging that immediate steps should be taken by the Government in the interests of the civilian population to accelerate the demobilization of doctors from the Forces.

The report of the executive committee showed that in 1944 the total number of persons entitled to medical benefit in Scotland was 2,085,611, and the cost of medical benefit was £1,080,069. The number of insured women on the register at the end of 1944 was 882,000. It is expected that during the next two years there will be a rapid decrease in this number owing to large-scale demobilization and the return of men to civil employment.

Dr. A. H. G. Burton, who for the past 26 years has been medical officer of health for Ilford, retired for reasons of health at the end of September. Dr. Burton combined with his work the duties of school medical officer and medical superintendent of the borough isolation hospital and maternity home. The borough council, at a meeting on Sept. 25, recorded by resolution its appreciation of the work that Dr. Burton has done for the local public health service.

Correspondence

Shortage of Civilian Pharmacists

SIR,—Should the Ministry of Labour wait inactive while events drift to a crisis it is quite probable that people will be unable to get the medicine prescribed for them during the coming winter.

Briefly, the situation is that more than 300 pharmacists are needed to fill existing vacancies. The need is not a question of guesswork; it represents the number notified from all parts of the country to the Pharmaceutical War Committee specially appointed to advise the Government on how available pharmacists ought to be allocated between civilians and the Services. The largest number of special releases which the Ministry appears likely to concede is 100—an inadequate allotment.

It is true that 400 pharmacists are to be released under "age and length of service" before the end of the year, but these men will be free to go wherever they like. Only a few of them will be available for the vacancies which must be filled if a breakdown in the medicine supply is to be averted. Many of the vacancies are in neighbourhoods, such as remote country places or the East End of London, to which a demobilized man will refuse to go when he is free to choose.

Obviously it is in the general interest of the community to maintain a service essential to the health of the community as a whole. If the Ministry of Labour refuses to maintain it the responsibility is on them; but it does seem odd that they should ignore the unbiased advice of a committee of professional men and representatives of the Service Departments set up by the Government to give it.—I am, etc.,

JAMES C. YOUNG,
Chairman, Central Pharmaceutical War Committee.

Naval Medical Establishments

SIR,—We were gratified to see a *Times* leader of July 18, which we have just received in the Pacific, on demobilization of doctors. It is high time the scandalous overstaffing in Service medical establishments, which has for a long time been voiced in medical journals, was put before the British public, who should judge if an independent inquiry is necessary, as it is they who suffer from a shortage of doctors and it is their money which is being wasted.

Now hostilities are over a sense of loyalty no longer forbids open criticism. The naval authorities still complain of a shortage of medical officers and refuse to release officers in their age-service groups, yet no attempt is made to investigate how the majority of us, who are idling away our time, could be redistributed with a saving of man-power that would probably be more than adequate to release those who are due. A hospital ship serves as one of many examples. Naval hospital ships carry a specialist staff of seven or eight doctors, averaging about one medical officer to every forty patients. The two main functions of these ships are acting as base hospitals and carrying patients from port to port. As a base hospital a full specialist staff may be necessary, but while carrying, two, or at the most three, medical officers of average experience would be adequate. The time spent as a base hospital by these ships during this war has probably averaged less than 25% of their commissions, the remainder being occupied by carrying, refitting, or "standing by." It follows, therefore, that during 75% of commissions, 60% or more of the medical staffs in these ships have been unnecessary.

We know wastage in wartime is inevitable, but this seems beyond all limits. The authorities point out that these ships had to be ready for heavy casualties from the Fleet, but with a little organization it could easily have been arranged for ships on special duties to be joined by a specialist team at short notice anywhere in the fighting zones. With hostilities over, there is no excuse for such conditions continuing, and when we hear of the shortage of doctors at home it is easy to understand the dissatisfaction at the decision not to release medical officers in their turn.

Similar conditions are present in many shore establishments, where the number of medical officers is kept up to a fixed complement seemingly to retain the prestige or acting rank of a senior medical officer. A fluid service, essential for the least wasteful use of the medical officers available, is impossible when such conditions exist.

We also hear that the release of specialists will be a still more difficult problem. This seems strange to us who have on numerous occasions encountered R.N.V.R. medical officers, often holding higher degrees and nearly always more experienced in their specialty than the permanent service specialist, who have been told that no specialist posts are available for them, or that they must wait until they have been longer in the Service. Now the time for demobilization is at hand the authorities declare that they cannot release specialists as there are no replacements for them. This just does not make sense.

Our faith in the Central Medical War Committee has been somewhat shaken by a hint in the same *Times* leader that the Services are represented on this committee only by permanent service officers. Admissions of overstaffing cannot be expected from such representatives, since they do not recognize overstaffing as such, having only experience of Service medical routine. The civilians on the committee have no first-hand experience of present conditions in the Services, and it seems, therefore, that we can expect little help from a committee that does not include an equal representation of emergency commissioned officers.—We are, etc.,

"THREE R.N.V.R. M.O.s."

Army Ways in India

SIR,—Perhaps you can find space to print the history of a young surgeon since arriving eight months ago for service in India.

After waiting over a month in Kalyan transit camp along with more than sixty other unemployed medical officers I, tired of waiting and by direct contact with the local A.D.M.S., got employment at a near-by British military hospital temporarily, though there was no work to do. I did at least see patients there and took a turn as surgeon-on-duty, my arrival increasing the roster to four. Three weeks later posting orders arrived for me from away up high—that is to say, it was considered normal for me to be unemployed for seven weeks.

I hastened off to my posting-order location, where there was supposed to be a general hospital. To my astonishment, not yet being accustomed to the ways of administrative India, there was no unit there and never had been. After a two-day search it was located 200 miles away; and I duly joined for duty. I made the number of surgeons up to three, though there was not enough surgery to keep one surgeon going for a morning. I became busier, circumcising West African soldiers, who love hospital, and who realized that circumcision, in addition to being a *juju* against V.D., provided ten days' respite from training. Eventually I struck, though my O. i/c division was anxious to let them in to keep the numbers of admissions up and thereby justify his promotion, which was recent. The place, climate, and water were almost intolerable, and amenities were completely absent.

After five weeks, respite came in the form of an order to rejoin my parent hospital. Off I went across India again, but of course my hospital was not at the location stated, and I discovered that where they were they were not functioning and were not likely to do so for three months. Again I reported to the local A.D.M.S. as lost and unemployed, and was given an appointment which was the best I have had in India, for the O. i/c division slipped off on leave, the other surgeon got posted, and while awaiting his replacement I was the only surgeon there and actually had about four hours' work a day.

That was not to last for long; and I was again temporarily posted to a unit which was actually where it was said to be, but, of course, it had been there for three years, so the news had had time to get through to H.Q. My own hospital was in this area and was about to function. I made the fourth surgeon at this hospital and again I had no work to do, being finished at 10.30 a.m. each day, apart from the week in the month when I was surgeon on duty and at least had the expectation of work, which rarely materialized. In this area within a radius of five miles there were nine general hospitals, with twenty-three surgeons, though I assure you the total work was insufficient for one division of three surgeons, with possibly a fourth available too as a relief for leave or sickness.

Eventually I rejoined my parent hospital, where the same deplorable lack of work was present. I was there only a week when I got a permanent posting to my present unit. Again with an attached surgeon we are four in number, and work is over for the day at 10 a.m., which makes the climate and absence of amenities more intolerable. Shortly after my arrival a lieut.-col. got posting orders to a unit at a location which it had left four months ago, and at least four of us in the mess knew it was a thousand miles away from where he gaily went, saying that he would like to see that part of the country anyway. His replacement actually came from that same hospital.

I will not moralize about inefficient administration, redundancy, over-establishment, personal frustration, etc., as this history speaks for itself, but I do ask you to believe that mine is not an exceptional case but strictly the usual. Little wonder that demobilization looms so large on our horizon as the only escape from this mad useless life.—I am, etc.,

"A SURGEON IN INDIA."

Demobilization and Repatriation

Sir,—It seems certain to me that "Four Service M.O.s, S.E.A.C." (*Supplement*, Oct. 6, p. 78), had no access to the *Medical Register* or *Directory*, otherwise, by taking the trouble to have just one look at the list of foreign practitioners, they would have saved themselves from "growing concern, annoyance, and extreme misgivings." The *Medical Directory* of 1945 contains 3,653 names on that list, and analysis of these names results in the following interesting revelations: 2,443 of these practitioners have been registered as a formality, which became necessary as a result of the presence of Allied Armies. They consist of: 1,280 American Army M.O.s, 632 Canadian Army M.O.s, 285 Polish Army M.O.s, 93 Czech Army M.O.s, and 153 belonging to the Forces of Belgium, Norway, Holland, and Australia. Of the rest, a large number are, or have been, in H.M. Forces—not to forget those who have been serving in the Pioneers as early as 1939. A very large number have qualified before 1915, which puts their age well above 50 years and, therefore, above military age; as a matter of fact, there are 46 who qualified before 1905. There are other very interesting revelations to be found in this list, such as house-surgeons above the age of 60, etc.

For the purpose of putting people's minds at rest and also in the name of fair play, I hope, Sir, that you will publish this letter. For obvious reasons I also have to remain anonymous, if this is possible.—I am, etc.,

"Ex-Pioneer."

Legal Obligations of the Practising Doctor

Sir,—I note that the General Medical Council has seen fit to erase from the *Register* the name of a medical man who has refused to visit a panel patient when requested. Being a person of non-legal mind I am puzzled by this, and would be grateful if you could explain exactly what it means. Has the doctor been punished for breaking a civil contract (with the Minister of Health) or has he simply been punished for refusing service to a person in need of it? If the former, why should a severe "criminal" penalty be awarded for a civil offence? Surely the Minister is capable of dealing with this himself. If the latter, then it can only be presumed that the G.M.C. regards it as unprofessional conduct of the basest degree if a doctor refuses to go to any patient when summoned.

This opens up a very grave question affecting the liberty of the individual, and a clear ruling should be given to all medical men in practice. I have always understood that, apart from civil contracts like N.H.I. and other similar contracts, the only power that could force a doctor to attend a case is his own conscience. Is a doctor to be the only citizen in our community who is forced to accept any particular duty or business that is offered to him? Is a doctor to be compelled to attend a person who has persistently refused to pay his bills?

I think it is time the B.M.A. took counsel's opinion as to what legal obligations a doctor has when called to a case where no contract exists. In these days of sweeping reforms it would seem an appropriate time to reform the undemocratic system by which our profession is now ruled. If we are to have our living taken away from us when we decline to surrender our right to choose our own patients, then let it be done by His Majesty's judges according to the law of the land, and subject to the Court of Appeal. This letter is not meant to excuse any neglect of duty by doctors, but simply to establish the freedom which any of His Majesty's subjects (except doctors) may claim from the Courts.—I am, etc.,

J. V. Mainprise.

Health Policy

Sir,—The officers of the Socialist Medical Association (*Supplement*, Oct. 13, p. 84) have stated their aim as "the provision of the best attention that science makes possible for all, irrespective of economic position, and the best possible conditions and full professional freedom for doctors and other health workers." This sounds good—quite as good as the best in any election speech by any member of any party. In addition to this idealistic aim, the Socialist Medical Association is committed to work for the setting up of a whole-time salaried State medical service, centrally controlled by virtually anonymous bureaucrats, medical and lay. The association, therefore, has tied its own hands. It has limited itself to one method for the achievement of a great objective. It seems pertinent, therefore, to ask if there is sufficient warrant for the underlying assumption that the kind of medical service envisaged would indeed give the kind of results, free from unpleasant by-products, desired not only by the officers of the Socialist Medical Association but also by the great majority of other doctors. Until it has been clearly demonstrated that this assumption is well founded, any appeal to outsiders for co-operation with the Socialist Medical Association is at least premature. I suggest that the next move is with the S.M.A.—I am, etc.,

Bexley, Kent. E. U. MacWilliam.

Tyre Replacements

Sir,—Dr. Douthwaite's complaint about tyres (*Supplement*, Oct. 6, p. 79) is justified. The statement that "the same priority is afforded as hitherto" to doctors may be theoretically true, but it is not so in practice. When I handed in a permit I inquired what my position was in order of priority. It was twelfth. I waited for weeks and weeks, repeatedly inquiring when my tyres were likely to come. At the end of a couple of months I was told that I "must wait my turn," but, as the position was getting desperate, I could not believe that the eleven who had precedence had not been supplied. What annoyed me particularly was when the employee who was in charge of tyre supplies spoke to me "out of the side of his mouth," saying: "Just leave it to me, sir, and I'll see what I can do for you." I had the feeling that I knew what he meant, but I would not play. It appears to me that authorized dealers are in a sense acting as agents of the Regional Tyre Officer—presumably a Government official—and that this sort of thing should go on is preposterous.

I was definitely informed by the authorized dealer that *doctors have no priority over others* and can only expect their tyres when they get them because "*it all depends*"—on what?—I am, etc.,

H. M. Stanley Turner.

Brookwood, Surrey.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. Geoffrey H. Bateman, F.R.C.S., at 55, Harley Street, W.1; Mr. T. A. Clarke, F.R.C.S., at Ersham Lodge, New Dover Road, Canterbury; Mr. F. D'Abreu, F.R.C.S., at 82, Harley Street, W.1; Dr. Thomas Hunt, F.R.C.P., at 49, Wimpole Street, W.1; Mr. H. Vernon Ingram, at Ferndale, Clayton Road, Newcastle-upon-Tyne 2 (as from Oct. 29, 1945); Dr. F. W. Jacobson, at 75, Wimpole Street, W.1; Dr. G. L. S. Konstam, F.R.C.P., at 40, Harley Street, W.1; Dr. V. R. O'Connor, at 8, Leam-Terrace, Leamington Spa; Dr. W. R. Reynell, F.R.C.P., at 87, Harley Street, W.1; Dr. D. D. Stenhouse Stewart, at 18, Albion Street, Hull.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Week-end course in rheumatic diseases, at Royal Bath Hospital, Harrogate, all day Sat. and Sun., Nov. 3 and 4. (2) Week-end course in diseases of the ear, nose, and throat, at Metropolitan Ear, Nose, and Throat Hospital, all day, Sat. and Sun., Nov. 10 and 11. Full particulars of all courses from the Fellowship of Medicine, 1, Wimpole Street, W.

On Thursday, Nov. 1, at 2.30 p.m., a practical demonstration of contraceptive methods will be given at the C.B.C. Mothers' Clinic, 108, Whitfield Street, London, W.1. Medical practitioners and senior students who wish to attend should apply in writing (not telephone) to the hon. secretary.

BIRTHS, MARRIAGES, & DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTHS

Clift.—On Oct. 6, 1945, at Farnborough Hospital, Kent, to Dorothy (*née* Newell), M.B., wife of Arthur F. Clift, F.R.C.S., M.R.C.O.G., a daughter—Dorothea Priscilla.

Fletcher.—On Sept. 29, 1945, at Howard Place, Carlisle, to Mollie, wife of Tom Fletcher, M.D., F.R.C.S., of Papcastle, Cockermouth, a son—Thomas Nigel.

Hamilton.—On Oct. 16 1945, at 20, Chester Street, Edinburgh, to Rita (*née* Fraser), wife of Capt. Ian Hamilton, R.A.M.C., a daughter.

MARRIAGES

Latto—Druitt.—On Oct. 11, 1945, at Holy Trinity Church, Brompton, Dr. Douglas Latto, Lethnot Lodge, Barnhill, Dundee, to Dr. Monica Druitt, Byways, Sway, Hants.

Wilson—McCullough.—On Sept. 3, 1945, at Hampton-in-Arden, Warwickshire, J. Noël Wilson, Capt., R.A.M.C., younger son of Mr. and Mrs. A. Wilson of Kenilworth, to Patricia Norah McCullough, elder daughter of the late Mr. and Mrs. H. McCullough of Belfast.

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of 3 recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

CITY OF BIRMINGHAM. Dudley Road Hospital (an acute general hospital with 1,100 beds). JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A) at the above hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for six months, otherwise it will be for one year. The salary is at the rate of £200 per annum, plus residential emoluments. Applications should be sent to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than November 12, 1945.

CITY OF BIRMINGHAM. Selly Oak Hospital (an acute general hospital of some 520 beds with an infirmary of 650 beds attached). JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A) at the above hospital, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for six months, otherwise it will be for one year. The salary is at the rate of £200 per annum, plus residential emoluments. Applications should be sent to the Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than November 12, 1945.

CITY OF MANCHESTER. Withington Hospital (1,150 beds). TEMPORARY RESIDENT ASSISTANT OBSTETRICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the above-mentioned post which will become vacant on approximately January 1, 1946. Although the vacancy is on the permanent assignment of staff, the appointment will be temporary for the time being and subsequently the officer appointed will be eligible to apply for the permanent post. Candidates should have had previous experience in midwifery. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Basic salary £350 per annum, rising by annual increments of £25 per annum to a maximum of £450. Full residential emoluments are additional to the salary stated. A temporary cost of living wages addition is also payable, and the present commencing annual cash remuneration is £380 in the case of a male officer and £374 2s. 6d in the case of a female officer. Full information and forms of application may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. Box 399, Town Hall, Manchester, 2, and applications for the post must be received by him not later than November 8, 1945. Canvassing in any form is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Newcastle General Hospital (900 beds). HOUSE SURGEON (B2) TO THE NEURO-SURGICAL DEPARTMENT.—Applications are invited from registered medical practitioners, male and female, for the above post, to become vacant on or about November 25, 1945, including R and W practitioners who now hold A posts. The appointment is tenable for six months and the salary is at the rate of £250 per annum plus cost-of-living bonus and full residential emoluments. Applications to be forwarded to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

CITY OF BRADFORD.—Applications are invited for the permanent position of MEDICAL OFFICER OF HEALTH of the City at a salary of £1,750 a year, rising by annual increments of £50 to £2,000. The person appointed must devote his whole time to the service of the Council, and a copy of the duties required to be performed may be obtained on application to the undersigned. The appointment is subject to the Local Government Superannuation Act, 1937, and the successful candidate will be required to undergo a medical examination. Applications should reach me not later than February 28, 1946. Candidates serving overseas may furnish the names of three referees in lieu of forwarding copies of testimonials, and should indicate where a telegram, or cable, will reach them if selected for interview. The consent of the Minister of Health has been obtained to the making of this appointment. Canvassing will be a disqualification.—N. L. Fleming, Town Clerk, Town Hall, Bradford.

CITY OF SHEFFIELD EDUCATION COMMITTEE. CHILD GUIDANCE CLINIC.—Applications are invited from persons with suitable qualifications and experience for the post of part-time PSYCHIATRIST at the Sheffield Child Guidance Clinic. The person appointed will be required to devote between five and eight sessions per week to the work, according to requirements. Having regard to the number of sessions per week, remuneration is at the rate of £2 2s per session, plus war allowance according to the Corporation scale. The session is of not more than two hours' duration. Further particulars of the appointment may be obtained from the undersigned.—Stanley Moffett, Director of Education, Education Office, Leopold Street, Sheffield.

CITY OF PLYMOUTH. City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT MEDICAL OFFICER (A) at the City General Hospital. The appointment will be for a period of six months, but terminable by one month's notice on either side at any time. Salary will be at the rate of £250 per annum, plus war bonus and full residential emoluments. All fees received by the Officer must be refunded to the Council. The duties of the post will be chiefly on the surgical wards of the hospital, and further details may be obtained from the Medical Superintendent. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF PLYMOUTH. Mount Gold Orthopaedic and Tuberculosis Hospital (200 beds).—Applications are invited from registered medical practitioners, male, for the post of RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had some experience of orthopaedic and fracture work. The duties are mainly in the orthopaedic and E.M.S. sections of the Hospital, but may include some duties in the pulmonary tuberculosis wards. Suitably qulaified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The appointment is for one year, but terminable by one month's notice on either side at any time. Salary is at the rate of £300 per annum, plus war bonus and full residential emoluments. Married quarters are not provided. Applications should be sent to the undersigned as soon as possible, together with copies of two recent testimonials.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

COUNTY BOROUGH OF SOUTHAMPTON. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH for Maternity and Child Welfare (Women).—Applications, with the consent of the Ministry of Health, are invited for the above appointment from duly qualified medical practitioners who are not already in whole-time public health employment. Salary £500 per annum, rising by annual increments of £25 to £700 per annum, plus war bonus. Applications should reach the undersigned as early as possible.—H. C. Maurice Williams, Medical Officer of Health, Civic Centre, Southampton.

COUNTY BOROUGH OF SOUTHAMPTON. Borough General Hospital. PHARMACEUTIST.—Applications are invited from male or female Pharmaceutists for work at the Borough General Hospital, Shirley Warren, Southampton (500 beds). Applicants should have had previous Hospital Dispensary experience, and must be qualified Pharmaceutists. The salary will be at the rate of £350 per annum. Applications should be addressed to the Medical Officer of Health, Civic Centre, Southampton, as early as possible.—H. C. Maurice Williams, Medical Officer of Health.

COUNTY BOROUGH OF WEST HAM. MEDICAL OFFICER OF HEALTH AND SCHOOL MEDICAL OFFICER.—Applications are invited from qualified medical men (including those in H.M. Forces) holding a Degree in or Diploma of Public Health, for the appointment of Medical Officer of Health and School Medical Officer, at a salary of £1,500 per annum, plus bonus, rising by annual increments of £50 to a maximum of £1,750 per annum, inclusive of all fees and emoluments. Applicants must be fully qualified to carry out and perform all the duties of Medical Officer of Health and School Medical Officer, and appertaining to the medical services of the Council, including those as Administrative Officer under the Mental Deficiency Acts, and such other duties as may from time to time be prescribed by the Council. The appointment will be subject to the approval of the Ministries of Health and Education, and will be terminable on three months' notice on either side. The person appointed will be required to devote his whole time to the duties of the office, and to pay over to the Council all moneys received by him in connection with the appointment from whatever source such moneys are received. He must not engage in private practice nor accept any other appointment except with the consent of the Council. The appointment will also be subject to the provisions of the Local Government Superannuation Act, 1937, and to a medical examination as required by the Council for the purposes of that Act, and the statutory contributions to the Superannuation Fund under the Act will be deducted from the salary. Applications on the form provided (which will be forwarded by the undersigned on receipt of a stamped addressed foolscap envelope) must reach me not later than noon on Saturday, February 28, 1946. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

COUNTY BOROUGH OF READING. RESIDENT MEDICAL SUPERINTENDENT at Battle Hospital (583 beds) (temporary).—The Council of the County Borough of Reading invite, from registered medical practitioners, including those serving in H.M. Forces, applications for the temporary post of Resident Medical Superintendent of the above general hospital. The post is normally permanent but, in accordance with the Council's decision and the requirements of the Ministry of Health, is at present designated as temporary. The consent of the Minister of Health has been obtained to the proposed appointment. Candidates should have had wide clinical and administrative experience of general hospital work and possession of higher degrees will be considered an advantage. The salary, in accordance with the Askwith Scale, will be at the rate of £1,000 per annum, including therein emoluments valued at £200 per annum, rising by biennial increments of £50 to £1,100 per annum, together with the current cost-of-living bonus. If the Askwith scale be amended, the salary will be reviewed in the light of any such amendment. The post is subject to termination by three months' notice on either side and to the provisions of the Local Government Superannuation Act, 1937. The successful candidate will be required to pass a medical examination. Forms of application can be obtained on application to me. Applications, endorsed "Resident Medical Superintendent," should reach me not later than November 19.—G. F. Darlow, Town Clerk, Town Hall, Reading.

CITY AND COUNTY OF BRISTOL, Department of Public Health. ASSISTANT RESIDENT MEDICAL OFFICER.—Applications are invited from registered medical practitioners, male or female, for the immediate appointment of Assistant Resident Medical Officer (B2) at Ham Green Hospital, including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months. Otherwise it will be held for a period of one year. Salary £200 per annum, plus full residential emoluments. Application forms may be obtained from the undersigned, to whom they must be returned, accompanied by copies of not more than three recent testimonials, forthwith.—R. H. Parry, Medical Officer of Health, Kenwith Lodge, Westbury Park, Bristol, 6.

OLDHAM ROYAL INFIRMARY (203 beds). DEPUTY RESIDENT SURGICAL OFFICER, who will act as Casualty Officer and Orthopaedic House Surgeon (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of Deputy Resident Surgical Officer, to take charge of the Casualty Department and to work under the Orthopaedic Surgeon, now vacant. R practitioners who now hold A posts may apply, when the appointment will be limited to six months, otherwise it will be for a period of twelve months. Salary is at the rate of £200 per annum, with full residential emoluments. Applications should be forwarded to the undersigned immediately.—F. W. Barnett, General Superintendent and Secretary.

IMPORTANT—All applicants should read the notice at the top of page 9 about qualifications required.

COUNTY BOROUGH OF BIRKENHEAD. Department of the Medical Officer of Health, Birkenhead Municipal Hospital. RESIDENT SURGICAL OFFICER (B1) (male or female).—Applications are invited from registered medical practitioners for the appointment of Resident Surgical Officer at the Birkenhead Municipal Hospital, which will shortly become vacant. The appointment is tenable for a period not exceeding twelve months. The duties of a Resident Surgical Officer are mainly surgical and obstetrical, and preference will be given to candidates who have had surgical and obstetrical experience in a municipal or voluntary hospital. Suitably qualified R and W practitioners now holding B2 appointments may apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C., or for other reasons are not eligible for military service. Alien practitioners will be eligible for appointment. The salary attached to the appointment will be at the rate of £300 per annum, plus war bonus, and the appointment will be subject to the regulations of the Council regarding holidays, sick pay, etc. Forms of application and further particulars relating to the appointment may be obtained from the Medical Officer of Health, Dr. D. Morley Mathieson, 9, Hamilton Square, Birkenhead, to whom they should be returned as soon as possible, endorsed "Resident Surgical Officer."—E. W. Tame, Town Clerk.

COUNTY BOROUGH OF IPSWICH. Borough General Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1). Applicants should have held house appointments and had surgical experience. Salary at the rate of £350 per annum, plus full residential emoluments. Suitably qualified R practitioners holding B2 appointments, also those holding B1 and rejected by the R.A.M.C., may apply. Applications to the Medical Officer of Health, Public Health Department, Elm Street, Ipswich.

COUNTY BOROUGH OF HALIFAX. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH for Maternity and Child Welfare (female).—Applications are invited from fully qualified medical women for the above appointment. Candidates already in whole-time Public Health employment by local authorities are not eligible. Salary scale £500 per annum, rising by annual increments of £25 to a maximum of £700 per annum. Commencing salary will be fixed in accordance with candidate's experience. The appointment will be terminable by one month's notice from either side. Applications must be received by the undersigned not later than the first post on November 2, 1945.—G. C. F. Roe, Medical Officer of Health, Public Health Department, Powell Street.

COUNTY BOROUGH OF ROCHDALE. Marland Isolation Hospital.—Applications are invited from registered medical practitioners (male or female) for the post of RESIDENT MEDICAL OFFICER (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months and in any case will only be renewable for a further period of six months. The hospital has 120 beds, and the duties will include the visiting of the neighbouring Pulmonary Hospital (36 beds). Salary £225-£275 per annum plus bonus of approximately £29 per annum with full residential emoluments. Application forms may be obtained from the Medical Officer of Health, Public Health Offices, Baillie Street, Rochdale, and must be returned to him as soon as possible.—Harry Bann, Town Clerk.

COUNTY BOROUGH OF DERBY. Derby City Hospital. RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months, otherwise it may be extended to twelve months. The salary is at the rate of £200 per annum with full residential emoluments, plus war bonus. The hospital is a 1A Casualty Hospital with a normal complement of 312 beds plus casualty beds, for acute medical and surgical cases, and with a large obstetrical department. Applications should be sent to the Medical Superintendent, City Hospital, Derby, as early as possible.—C. Ashton, Town Clerk, Derby.

IPSWICH COUNTY BOROUGH COUNCIL. Borough General Hospital (normal beds 252).—Applications are invited from registered medical practitioners, for the appointment of RESIDENT SURGICAL OFFICER (B1). Applicants should have held house appointments and had surgical experience. R practitioners holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £500 per annum, with full residential emoluments, and the appointment is subject to one month's notice on either side. Applications should be sent at once to the Medical Officer of Health, Elm Street, Ipswich.—A. Moffat, Town Clerk, Town Hall: Ipswich.

COUNTY BOROUGH OF STOCKPORT. Stepping Hill Hospital (480 beds). RESIDENT ASSISTANT MEDICAL OFFICER.—Applications are invited from duly qualified medical practitioners for the post of Resident Assistant Medical Officer (B2) (male or female) at the above hospital. Determinable by one month's notice on either side. Salary £350 p.a. (plus cost-of-living bonus), with board, residence and laundry. The person appointed will be required to devote the whole of his/her time to the duties of the office, which are mainly surgical. R and W practitioners holding A posts may also apply, when appointment will be limited to six months; otherwise not to exceed one year. Applications are to be sent, endorsed "Assistant Medical Officer."—J. Yule, M.D., D.P.H., Medical Officer of Health, Town Hall, Stockport.

CORNWALL COUNTY COUNCIL. TEMPORARY WHOLE-TIME ASSISTANT SCHOOL MEDICAL OFFICER.—Applications are invited from registered medical practitioners for the above appointment. Part of the duties will consist of work in connexion with the establishment of a Child Guidance Service in the county. Applicants should hold the Diploma of Psychological Medicine, and experience in child psychology will be an advantage. The salary scale is from £600 per annum, rising by annual increments of £25 to £800 per annum, and the successful candidate will devote the whole of his or her time to the duties of the office, under the direction of the county medical officer. Candidates already in whole-time Public Health employment by local authorities will not be eligible. There will be a travelling allowance in accordance with the county scale. The approval of the Minister of Health has been obtained to the appointment, and candidates should submit with their applications full information as to their liability for military service, medical fitness and position with regard to deferment. Applications endorsed Assistant School Medical Officer, should be forwarded to the County Medical Officer, County Hall, Truro, not later than October 31, 1945.—L P. New, Clerk of the County Council, Truro.

EAST SUSSEX COUNTY COUNCIL. TEMPORARY ASSISTANT COUNTY MEDICAL OFFICER OF HEALTH.—Applications are invited for the post of whole-time temporary Assistant County Medical Officer from registered medical practitioners with experience in public health administration and possessing the Diploma of Public Health. The duties of the post will be mainly administrative in all branches of the Department. Commencing salary within the range of £700 to £900 per annum, rising by increments of £50, plus cost of living bonus (at present £59 16s. per annum). Travelling and subsistence allowances will be paid according to the County scale. The post will be subject to the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a satisfactory medical examination. The post is not one to replace a medical officer on war service and the approval of the Ministry of Health has been obtained to the making of the appointment. For the present, the Doctor selected for the post will not be free to apply for another appointment without obtaining permission to do so from the Ministry of Health.

Applications on a form to be obtained from the County Medical Officer of Health, County Hall, Lewes, accompanied by not more than three recent testimonials must be submitted to him not later than November 10, 1945.—H. S. Martin, Clerk of the County Council, County Hall, Lewes.

LANCASHIRE COUNTY COUNCIL. Biddulph Grange Orthopaedic Hospital.—Applications are invited from registered medical practitioners, male or female, for the appointment of RESIDENT JUNIOR HOUSE SURGEON (B2), now vacant, including R and W practitioners who now hold A posts. If held by a practitioner, male or female, who is liable under the National Service Acts, the appointment will be limited to six months, otherwise it will be for a period of twelve months. The salary is at the rate of £250 per annum, with full residential emoluments. Applications should be sent to Dr. F. Hall, School Medical and Child Welfare Department, County Offices, Preston, not later than November 3, 1945.—R. H. Adcock, Clerk of the County Council.

SURREY COUNTY COUNCIL. Kingston County Hospital, Wolverton Avenue, Kingston-on-Thames (400 beds approx.). RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the appointment of Temporary Resident Surgical Officer (B1) to the above acute general hospital. Applications should preferably possess a higher surgical qualification. Salary £550 per annum plus war bonus and full residential emoluments. Suitably qualified R and W practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been already discharged from military service or have been rejected by the R.A.M.C. The appointment is for a period not exceeding three years and is subject to one month's notice on either side but any Local Government Superannuation rights will be preserved. Apply to the Medical Superintendent at the Hospital by November 24, 1945.

MIDDLESEX COUNTY COUNCIL. HOUSE SURGEON (RESIDENT; A) required at ASHFORD COUNTY HOSPITAL, MIDDLESEX.—Applications invited from registered medical practitioners (men only), including those within three months of qualification who are liable to service under National Service Acts. Salary £120 per annum plus war bonus (now £60 per annum, proportion only paid in cash); board, lodging and laundry. Whole-time duties, such as Council may require, under supervision of Medical Director. Six months' appointment. Post vacant November 15, 1945. Application to Medical Director of Hospital. Application forms not provided. Closing date November 3, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

WEST SUSSEX COUNTY COUNCIL. St. Richard's (Public Health) Hospital, Chichester.—Applications are invited from registered medical practitioners, male or female, for the post of ASSISTANT MEDICAL OFFICER (B1) at this hospital. R and W practitioners now holding B2 appointments may apply. Applications from R practitioners cannot be considered unless they have been rejected by the R.A.M.C. Duties mainly medical and receiving ward. Salary £350 per annum, plus war bonus (at present time, male £30, female £24 per annum) and full residential emoluments. Applications to be sent to the Medical Superintendent.

ALBERT DOCK HOSPITAL, Alnwick Road, E.16. HOUSE OFFICER (A) including duties of CASUALTY OFFICER required as from November 1.—Applications are invited from registered British practitioners including practitioners within three months of qualification who are liable to service under the National Service Acts, 1939-41. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary at the rate of £150 per annum with full residential emoluments. Applications to be sent immediately to the undersigned.—F. A. Lyon, Administrator and Secretary, Seamen's Hospital Society, Greenwich, S.E.10.

October 23, 1945. *Secretary.*

ROYAL BERKSHIRE HOSPITAL, Reading.—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (B2) to the GYNAECOLOGICAL AND OBSTETRIC DEPARTMENT, to become vacant on December 1, 1945, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Salary is at the rate of £200 per annum, with full residential emoluments.

Applications are also invited from registered medical practitioners, male and female, for the following appointment:—CASUALTY OFFICER (A), to become vacant on December 7, 1945. Salary is at the rate of £150 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months.

Applications should be sent immediately to H. E. Ryan, Secretary and House Governor.

ROYAL SAMARITAN HOSPITAL FOR WOMEN, Glasgow.—The Governors invite applications for the post of VISITING SURGEON in the hospital. Practitioners serving in H.M. Forces are invited to apply. Particulars as to duties, etc., may be obtained from the undersigned, with whom candidates are requested to lodge twenty-five copies of application and three relative testimonials with each not later than Thursday, February 28, 1946. Candidates are informed that canvassing is not allowed.—T. Mason MacQuaker, Secretary and Treasurer, 179, West George Street, Glasgow, C.2.

ROYAL FREE HOSPITAL, Gray's Inn Road, W.C.1.—Applications are invited for the post of TEMPORARY HONORARY ASSISTANT GYNAECOLOGIST and OBSTETRICIAN to the hospital. Candidates are expected to submit such evidence of their qualifications as they may think desirable. Applications to the Secretary not later than November 10, 1945.

ST. BARTHOLOMEW'S HOSPITAL, E.C.1. TEMPORARY CHIEF ASSISTANT in the Department of Anaesthetics.—Applications are invited for the post of whole-time Chief Assistant in the Department of Anaesthetics at St. Bartholomew's Hospital. Salary from £350 to £550 per annum. Applications to the undersigned not later than November 10, 1945.—C. C. Carus-Wilson, Clerk to the Governors.

THE SUTTON AND CHEAM GENERAL HOSPITAL, Sutton, Surrey.—Applications are invited for the temporary appointment of HONORARY PHYSICIAN to take charge of the Medical Outpatient Clinic on Friday afternoons at 3 p.m., and to look after such in-patient cases as are allotted to him. Candidates must be registered medical practitioners and must hold the degree of M.D., or higher qualification. Applications should be sent to the Secretary by Saturday, November 10, 1945.

ST. MARY'S HOSPITAL, W.2. Radiotherapy Department. Appointment of personnel.—The Board of Management intend in the near future to make the following whole-time appointments:

(a) DIRECTOR OF RADIOTHERAPY DEPARTMENT.

(b) ASSISTANT RADIOTHERAPIST.

(c) PHYSICIST.

The DIRECTOR will have full staff status: this appointment will not be made immediately because it is not the hospital's policy to make such appointments under present circumstances. Applications are now invited for the interim appointment of whole-time Radiotherapist, salary to be at the rate of £800 per annum. The appointment will be for one year, the holder to be eligible for re-election. The successful candidate will be required to join the Federated Superannuation Scheme. Applications should reach the House Governor, St. Mary's Hospital, W.2, not later than Friday, January 4, 1946.

ASSISTANT DIAGNOSTIC RADIOLOGIST (whole-time).—Applications are invited for the above post. Candidates must possess a Diploma of Radiology. The appointment is for one year, at a salary of £600 per annum. The successful candidate will be required to join the Federated Superannuation Scheme. Applications should reach the House Governor, St. Mary's Hospital, W.2, not later than November 1, 1945.

SECOND ASSISTANT DIAGNOSTIC RADIOLOGIST (part-time).—Applications are invited for the above post. Candidates must possess a Diploma of Radiology. The appointment is for six months, at a salary of £250 per annum, the holder to be eligible for re-election. He will be required to devote five half days per week to his work. Applications, together with not more than three testimonials, should reach the House Governor, St. Mary's Hospital, W.2, not later than November 1, 1945.

SAMARITAN FREE HOSPITAL FOR WOMEN, Marylebone Road, London, N.W.1.—Applications are invited from registered medical practitioners, male and female, for the appointment of a HOUSE SURGEON (B2), including R practitioners who have held A posts, for a period of six months commencing November 15, 1945. Salary at the rate of £150 per annum, with board, lodgings and laundry. Applications should be sent to the Secretary at the Hospital on or before Wednesday, October 31, 1945. —G. H. Hawkins, Secretary.

SWANSEA GENERAL AND EYE HOSPITAL.—Applications are invited from registered medical practitioners, male and female, for the appointment of CASUALTY OFFICER (B2), now vacant, including R and W practitioners who now hold A posts. If held by an R or W practitioner the appointment will be limited to six months. The salary is at the rate of £192 10s. per annum, with full residential emoluments.—O. C. Howells, Secretary-Superintendent.

SUSSEX EYE HOSPITAL, Eastern Road, Brighton (45 beds).—Applications are invited from registered medical practitioners for the appointment of a HOUSE SURGEON (B2), male or female, including R practitioners who now hold A posts. Salary is at the rate of £175 per annum, with full residential emoluments. If held by an R practitioner the appointment is limited to six months. Applications should be sent to the undersigned.—Percy F. Spooner, Secretary-Superintendent.

ST. ANDREW'S HOSPITAL, Northampton.—Applications are invited from registered medical practitioners for appointment of TEMPORARY ASSISTANT MEDICAL OFFICER (B1). Previous psychiatric experience advisable, but not essential. Commencing salary £500 per annum, together with board, lodging, laundry, and attendance. Suitably qualified R and W practitioners now holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications should be sent to the Medical Superintendent.

SCUNTHORPE AND DISTRICT WAR MEMORIAL HOSPITAL, Scunthorpe, Lincs.—The Board of Management invites applications from registered medical practitioners for the post of HONORARY SURGEON to the Ear, Nose, and Throat Department, vacant December 31, 1945. Applicants must be Fellows of one of the Royal Colleges or hold such qualifications as may be acceptable to the Board of Management. Qualifications, giving names of referees or accompanied by confidential reports from referees should reach the undersigned not later than November 9, 1945. The appointment, in accordance with the constitution, will in the first instance be for a period of one year, with eligibility for reappointment.—S. Lord, Secretary-Supt.

STAMFORD, RUTLAND AND GENERAL INFIRMARY.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (B2), to become vacant on December 1, 1945, including R practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Salary is at the rate of £300 p.a., with full residential emoluments. Applications to the Secretary, H. F. Donald, The Infirmary, Stamford.

Most suitable for a school, medical in stitution, high-class hotel or service flats. Ampl accommodation. 100 acres of park available i required, for golf links, fishing over one mile o river Clwyd, excellent walled garden, own swim ming pool, tennis lawns, etc Central heating, mai water and electricity. Eight miles from well-know seaside resort. Excellent 'bus service, station on mile. Order to view by permit only. Apply R. E Birch, Estate Office, Coed Bedw, Abergele.

WOMAN DOCTOR, ex-R.A.M.C., urgently re quires SMALL FLAT Central London, preferably St Pancras, Marylebone areas.—Box 3591, B.M.J.

UPPER BERKELEY STREET, W.1. LEASE OF HOUSE for disposal with contents of ground and first floors which are fully equipped and furnishe as waiting room, consulting room, X-ray an therapy rooms. Unfurnished maisonette on [illegible] floors.—Apply Elliott, Son & Boyton, 86/87 Wimpole Street, W.1. Welbeck 8367.

NURSING HOMES

A SPECIAL FLOOR has been opened at CROSS WAYS NURSING HOME, St. Joseph's Road Weston-Super-Mare, Somerset, for convalescent o chronic patients. Children also catered for. Resi dent doctor.—Apply Matron (late of Bengeo Nursing Home, Hertford.

FOR DISPOSAL PRIVATE MENTAL HOME fo Ladies, old-established, licence for 40 patients, Wes Midlands. Principals only.—Box 3348, B.M.J.

NURSING HOME, South Coast, near sea, acut medical, slight mental cases treated, State registere nursing staff, diet a speciality, large garden.—Bo 3556, B.M.J.

NEAR WORTHING and BRIGHTON, establishe NURSING HOME, going concern, licensed fo eight beds, fully booked up to next April, to b sold with all equipment and furniture, well-situate detached modern brick building with 10 rooms, : bath-rooms, kitchen, central-heating, all servic garden, freehold, £5,000 all at.—Sole agents Messrs. J. Ellman Brown, 24, East Steet, Shoreham by-Sea. Telephone 736-7.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd., The Gainsborough Press, St. Albans. Printed in Great Britain. Entered as Second Class at New York, U.S.A., Post Office.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY NOVEMBER 3 1945

HEARD AT HEADQUARTERS

The School Medical Service

Two meetings of the B.M.A. committee to consider the position arising under the Education Act have been held, the representatives of the Association are going to the Ministry of Education for the fifth time, and a report is being made to the Council in November. The implications of this Act, which transfers a large population from the care of the general practitioner to that of the school medical officer, are gradually being realized. Some education authorities are said to be largely increasing the number of their school medical officers; an increase from 16 to 62 is spoken of in one large county. Many cases which are ordinarily treated at home are likely to go to hospital. When the parent realizes that the child can be treated at hospital freely, whereas at home a fee will have to be paid to the general practitioner, a bias in favour of the hospital will be created in his mind, and, apart from the money question, owing to the magic which attaches in some quarters to the word "specialist," many people may feel that the child will be better looked after in hospital.

The line taken by the Association in its persistent endeavours is that this should not be an occasion for anticipating National Health Service developments. Hitherto it has been necessary to say that there are not enough general practitioners to meet the requirement, but with demobilization proceeding it should now—or soon—be possible to claim that general practitioners can take their rightful place in this work.

Fees of Medical Witnesses

A letter has been received from the Home Office concerning the fees of medical witnesses, which was the subject of a resolution at the A.R.M. last year. The letter points out that the question of fees in criminal cases was considered by a Departmental Committee appointed in 1939, but meetings of the committee were suspended owing to the war and have not yet been resumed. The intention is to resume them as soon as possible, and the Home Secretary will consider the matter as soon as the committee reports. The fees in civil cases are a matter for the Lord Chancellor. There is reason to believe that the Departmental Committee so far as it had gone was in sympathy with the medical claim. A subcommittee of people who have special experience of court work has been set up in the B.M.A. with a view to preparing further evidence and submissions.

Expert Opinion

The question of the medical witness is not altogether a simple one. All doctors on occasion have to give evidence in court, but for most it is an exceptional experience and perhaps not a very onerous one. Certain doctors, however, by reason of their appointment as police surgeons or their special experience are often in the witness-box, and when they give evidence they are treated as people of special knowledge on certain lines, though there is no recognition of this when it comes to the payment of the fee. If a specialist gives evidence he is paid as a specialist, but these doctors, who within their particular range are specialists and are asked questions not restricted to medical fact, receive the same fee as any other medical witness.

The point is one of some difficulty. A medical witness may be a witness as to fact or he may be an expert witness. The expert witness is in a different category from the ordinary witness; he has to be approached, and he may or may not give evidence, at his own discretion. When the ordinary medical witness is asked his opinion, as apart from the question of fact, he becomes in effect an expert witness, and could, if he were an awkward person, refuse to answer. It is suggested that some discretion should be given to the court or taxing master for additional fees in such cases.

Army Medical Records

The Association has received from a member who is a physician to an insurance company a complaint that in the case of men discharged from the Services on medical grounds and who desire to take out some form of life assurance the Ministry of Pensions is not co-operative. It is of course necessary for the insurance company to obtain medical details of the illness for which the man was discharged, but the Ministry is said to take refuge behind the statement that its information is strictly confidential. To an inquiry by the Association the Ministry of Pensions replied that applications from doctors for medical records of proposers for life assurance would receive sympathetic consideration if accompanied by the proposer's consent in writing.

It surely should be accepted that during the period of a man's service in the Army the Army is, so to speak, his private medical attendant, and, with his consent, particulars of his medical record might be given to the physician of an insurance company, who, for this particular purpose and time, is the man's "own doctor."

The General Practice Committee

The General Practice Committee of the B.M.A., which unanimously elected Dr. Wand as its chairman, had an all-day meeting on Oct. 17. This is one of the busiest committees of the Association, as witnessed by the number of its subcommittees. One of the latter deals with colliery and works practice, another with Post Office medical officers, a third with ship surgeons, a fourth with Public Medical Services, a fifth with the industrial medical service. It is perhaps a little anomalous that the Association should have two general practice committees, for the Insurance Acts Committee is concerned all the time with matters of general practice. Future developments in the direction of "comprehensiveness" may bring about a comprehensive General Practice Committee embodying the I.A.C. Meanwhile both committees have much to do, and both are holding meetings in October, December, March, and May. The General Practice Committee, by the way, is unusual in that all but two or three of its twenty or so members are members of the Council.

L.C.C. Refresher Courses for G.P.s

The L.C.C. is proposing to arrange concurrently four intensive courses, each of a fortnight's duration, at grouped hospitals on the lines of the arrangements made before the war for refresher courses for insurance practitioners. From fifteen to twenty doctors would attend each course, and it is expected that it will be possible to hold three courses a year at the selected hospitals—that is, a total of twelve courses in the year, affording facilities for up to 240 general practitioners.

The L.C.C. is also proposing facilities for young practitioners and for specialists in training. For young practitioners on release from the Forces, in addition to accepting suitable candidates to fill normal vacancies in the hospital service, eighteen temporary additional positions at a salary of £350 a year, with residential emoluments or £100 in lieu if non-resident, are to be created. For specialists in training it is proposed to create 11 temporary positions (5 medical and 6 surgical) at salaries of £550 a year, with residential emoluments. It is estimated that their stay in hospital is unlikely to exceed eighteen months.

Ward Sisters

Nurses, like doctors, are giving thought to the standards of professional education. On October 13 a conference was arranged by the Royal College of Nursing to consider the Horder Report on the recruitment and education of nurses, with special reference to ward sisters. The conference recommended the reorganization of the nurse training schools, with Treasury grants to secure an income for each school independent of that of the hospital with which it is associated and to provide scholarships and maintenance grants for student nurses, and with accommodation which would permit the introduction of the "block system" of training. The conference also wanted more postgraduate facilities for ward sisters and the representation of ward sisters on committees promoting their interests and on bodies responsible for the examination of nurses for State registration. The college proposes to form a special section for ward sisters within its organization.

PANEL CONFERENCE

ANNUAL CONFERENCE OF LOCAL MEDICAL AND PANEL COMMITTEES, NOV. 15

Motions received from Panel Committees

Standards of Remuneration

MOTION by Bristol: That this conference regrets that the Minister of Health has not publicly affirmed the intention of his predecessors to inquire into the capitation fee after the war "from the ground up" and instructs the Insurance Acts Committee to request him to do so and to implement the promise forthwith.

MOTION by Cumberland: That in the opinion of the conference the time is ripe for a substantial increase in the capitation fee, which is long overdue.

The Future of Medical Services

MOTION by Hampshire: That this conference considers that Resolution 95 of the Annual Representative Meeting in December, 1944, lays down the right mode of approach to a National Health Service and requests the Insurance Acts Committee to urge strongly that this method be adopted.

MOTION by Hampshire: That this conference is of opinion that Resolution 241 of the Annual Representative Meeting in December, 1944, affords a valuable safeguard against possible misrepresentation of the profession and requests the Insurance Acts Committee to stress this with the Negotiating Committee.

MOTION by Kent: That in the opinion of this conference a National Health Service satisfactory for both the patients and the doctors can only be established if the following safeguards are ensured:

1. Free choice of doctor by patient and of patient by doctor shall be maintained to the utmost possible extent.
2. All questions as to what treatment (for prevention, cure, or rehabilitation) is best for individual patients or for particular classes of patients shall be decided only by medical practitioners.
3. The practitioner attending shall be the responsible arbiter of the treatment necessary for the individual patient, including type and place of treatment.
4. Questions of health policy, whether regional or local, shall not be determined without the concurrence of advisory medical committees, subject to appeal by either party to any dispute to the Minister of Health.
5. All administrative medical officers directly concerned with general practice must themselves have had not less than ten years' experience as general practitioners.
6. Contracts between general practitioners and the State shall be made with the Minister of Health, with whom also all questions of appointment, promotion, pay, and pension shall be agreed.
7. All general practitioners shall have reasonable security of tenure.
8. The right of private practice shall be retained for all practitioners.
9. Service under the National Health Insurance Act shall count towards pension, etc., in any new service.
10. After retirement doctors to have the right to undertake remunerative work without loss or reduction of pension.
11. Sick leave on full pay shall be allowed for an agreed period and a locumtenent shall be provided by the State.
12. All practitioners of British nationality on the *Medical Register* on the appointed day shall have a right of entry into the service, and also all such practitioners subsequently admitted to the *Register*.
13. There shall be secured to aggrieved patients and aggrieved doctors a statutory right to have any complaint fully investigated.
14. Practitioners adjudged to be guilty of faults incurring removal from the *Medical Register* shall have full right of appeal to the Courts.

Irregular Removal of Names from Doctors' Lists

MOTION by Bristol: That this conference considers that when irregular removal of a name from a doctor's list is remedied during the same or following quarter the capitation fee for that quarter should be credited to the doctor concerned, even though the reinstatement does not take place during the statutory ten days.

MOTION by Sheffield: That this irregular procedure continues and recently has been increasing; and this conference urges the Ministry to take action to alleviate a grievance that causes hardship to the insured person and hinders the doctor in the performance of his duties to his patient.

Sickness Benefit in Pregnancy

MOTION by Reading: That this conference urges that sickness benefit be paid for six weeks preceding the date of confinement.

MOTION by Cumberland: That this conference is of opinion that during the time a woman is receiving benefit due to pregnancy an initial certificate followed by a birth certificate and a final certificate are all that need be provided by the medical attendant.

Post-war Financial Assistance for Doctors

MOTION by Birmingham: That all information relating to the new scheme for the purchase of practices shall be circulated as soon as possible and while they are still serving to all medical officers. As this information will also be of value to other doctors in practice who may not yet have completed the full purchase of their practices or who contemplate entering into partnership a copy shall also be sent to them.

Treatment of Tropical Diseases in ex-Service Personnel

AMENDMENT by Reading: That this conference considers that the medical report should be sent to the patient's own doctor so that treatment may be continued at home if possible, reference to hospitals being made only if necessary.

Grouping of Areas for Election of I.A.C.

MOTION by Lincs (Lindsey): That the Insurance Acts Committee be strongly urged to reconsider the grouping of areas for the election of direct representatives, as large areas find themselves in a permanent minority without adequate representation.

MOTION by Derbyshire: That the Insurance Acts Committee be instructed to consider without further delay the continued disfranchisement of Derbyshire from direct representation on the committee owing to the preponderant voting strength of the Panel Committees in Cheshire (the other county included in Group F) with a view to some rearrangement preferably by the inclusion of Derbyshire in a North Midland Group.

Election of Panel Committee

MOTION by Derbyshire: That the Ministry of Health be approached with a view to securing its approval of new elections of Panel Committees at an early date.

Protection of Practices: Adjustment of Lists

MOTION by West Ham: That this conference recognizes that many practitioners discharged from service with the Forces will return to panel lists which are seriously depleted, particularly because of their inability to undertake new acceptances during their absence. It endorses in principle the efforts of those Panel Committees which are trying to provide some compensation for these practitioners by appropriate adjustments of their Distribution and Allocation Schemes, but believes this should be done on a national scale. It instructs the Insurance Acts Committee to examine with all possible speed the possibilities of taking such action, and to issue guidance thereon to Local Medical and Panel Committees.

Demobilization of Doctors from the Forces

MOTION by Carmarthenshire: That, with a view to expediting the demobilization of medical personnel from the Forces, the Insurance Acts Committee be asked to press for representation on the Central Medical War Committee of medical men who have held commissions in territorial or temporarily mobilized Forces since September, 1939.

MOTION by Lanarkshire: That immediate steps should be taken by the Government in the interests of the insured population to accelerate the demobilization of medical practitioners from the Forces.

Advertisements for Proprietary Medicines

MOTION by Glasgow: That the continued toleration of unscientific and untruthful advertising of proprietary medicines is an evil that is inimical to medical progress and the best interests of the public.

Purchase Tax on Drugs and Instruments

MOTION by Swansea: That in the opinion of this conference the time is now ripe for the removal of purchase tax from all doctors' legitimate prescriptions, drugs ordered in bulk for dispensing, or on surgical instruments. The Insurance Acts Committee is urged to take up this matter with all speed with the appropriate authorities.

Shortage of Nurses

MOTION by Buckinghamshire: That this conference views with grave concern the existing dangerous shortage of nurses and the misrepresentation in the public mind of the conditions in the nursing profession, and considers that the Minister of Health should be urged to take immediate steps to attract a sufficient number of suitable recruits so that an adequate nursing service can be ensured throughout the country.

CINEMATOGRAPHY IN POSTGRADUATE INSTRUCTION

The well-known "Canti" film of tissue growth, which was made by the late Dr. Ronald Canti in the 1920's, may be said to have marked the beginning of medical cinematography in this country, and for that reason needed no apology when it was introduced to a meeting of the Suffolk Branch of the B.M.A. on Oct. 10 by Dr. Malcolm Donaldson. It is not perhaps of value, as Dr. Donaldson pointed out, in medical practice to-day, but it has a number of features which make it worth while showing. It was made, said Dr. Donaldson, when Canti and he were investigating the action of radium on living cells. In 1922 they both started to study the action of radium in cases of carcinoma of the cervix, and visited the late Dr. T. S. P. Strangeways, who at that time was working on the action of *x* rays on tissue culture. Canti designed a lead incubator in which they could watch the effect of radium on similar cultures, but it was a very wearisome business looking down a microscope for hours on end, so Canti decided to try to photograph these cells at intervals of one, two, or three minutes and then to show them on a film increasing the rate several hundred times—

the reverse of the slow-motion pictures now often shown.

In his opening remarks Dr. Donaldson said that during the 25 years he had been teaching at Bart's films had been shown at the hospital in order to demonstrate a special operation or a piece of research work, but they had not been used as a routine. They now had a subcommittee considering the matter. There were many points to be considered, such as what parts of each subject could be taught by means of the cinema, and, secondly, how it should be used. Should it be a "talkie" replacing a lecture, or should it be short pieces of film illustrating points in a lecture? At the present time there was a great shortage of films suitable for the teaching of medicine. Recently the Scientific Film Association appointed a medical subcommittee, which, under the chairmanship of Mr. McAdam Eccles, had been very active, and, in conjunction with the Royal Society of Medicine, was drawing up a list of all known medical films in this country. It was hoped in the near future to have a central library of them. The problem of supplying films for post-graduate instruction was in some ways easier than that of obtaining them for undergraduate teaching, because the former were for audiences who had the fundamental knowledge to which further knowledge could easily be added. It was very different in the case of undergraduate teaching, where the fundamental knowledge had to be "put across." It had to be confessed that teachers were not film-minded at present, but Dr. Donaldson looked forward to the day when we should have medical film writers in the same way as at present we had medical textbook authors.

RELEASE OF MEDICAL STUDENTS

The following statement was included in a letter recently sent to Vice-Chancellors of universities by the Ministry of Labour and National Service:

> "It has been decided that students of medicine, dentistry, and veterinary surgery should be released in Class B subject to recommendation by their universities or by the appropriate schools, provided they are in release groups 1 to 49—i.e., those with substantially three years' service—and either: (*a*) gave up the reservation to which they were entitled in order to join the Forces; or (*b*) joined the Forces before the present conditions of reservation were in operation but would have been reserved if those conditions had been in force."

It is understood that the only students not covered by this statement are those who were dereserved after failure in examinations.

CARS: REPAIRS AND SPARE PARTS

The B.M.A. has been informed by the Ministry of War Transport that a number of manufacturers are now in a position to handle orders for spare parts without "spares shortage certificates." To encourage a return to normal trading practices these certificates have been discontinued except for parts and units nominated by the following manufacturers as being in short supply: (1) Vehicle manufacturers: Albion, Austin, Leyland, Morris Motors, Standard, and Wolseley. (2) Engine manufacturers: Norris, Henty and Gardner. (3) Component manufacturers: Hardy Spicer. In these latter cases the Ministry of War Transport's regional certifying officers will continue to issue spares shortage certificates provided the parts or units are required for vehicles engaged on essential work. It will be for those manufacturers whose products are not now subject to certificate procedure to keep car owners informed of when they will be able to meet demands, and doctors should, therefore, apply to the makers rather than to the regional certifying officer.

Correspondence

Practitioner Hospitals

SIR,—There is a justifiable demand for improvement in the organization of health services. Planning must place in the forefront the family as the unit of the served and the family doctor, who is in close relation with the home, as the unit of the service. There must be vision of future possible and probable developments during "progress" as well as of the needs of the present. The family doctor fears regimentation by Government measures with non-appreciation of his future needs; he feels that in the hospital surveys that have recently been made there is a lessening of confidence in him on the part of London consultants, with whom he has spent years of work and study, and who know that many very good, if not the best, brains have chosen general practice. There is danger, too, of splitting the profession into sections instead of co-ordination into one great whole. The future efficiency of the health service lies in the fullest co-operation of the family doctors, whose preservation and the promotion of whose efficiency should be the first considerations of any planning.

With the big advances in medical science the knowledge and responsibilities of the family doctor have increased and will continue to increase daily. The difficulties from his point of view of taking postgraduate courses make their perpetuation, as the principal means of adding to his knowledge, almost absurd; for the sake of both patient and doctor opportunities must be at hand from day to day, and these can be provided only through the right development of "practitioner hospitals" or small general hospitals, urban and rural. These must have ordinary diagnostic equipment, including *x*-ray apparatus, pathological laboratory, electrocardiograph and other aids, and must be staffed by the family doctors advised by regular visiting consultants from teaching and other hospitals associated together at the university centre.

The importance to the patient of the "practitioner hospital" has been referred to by many: there is the advantage to patients and their friends of proximity to their homes; patients can be admitted speedily under the care of the first observer (the family doctor); there is continuity of both treatment and interest, and, what is of great importance, the faith of the patient in his own doctor plays its part in the healing process. The "practitioner hospital" provides a homeliness of environment—a "family" atmosphere arising from pride and interest of the patients in their own institution—facilities for nursing with the right type of diet, for minor operations if required, and for a full examination and observation, with rest if necessary, without anxieties or fussing; it provides consultative clinics for all general cases and most special cases, excepting only the very uncommon.

The family doctor has to know much of all his subjects (the specialist more of one). He has to deal with people of all ages and classes, all types of sickness under very varied circumstances. He must have knowledge of *general* common risks, also *special* risks of places and times, and be prepared to recognize warnings and signs common to many maladies, and the earliest special differential signs. He must know and practise chemotherapy and psychology as he has known the value of antiseptics, vitamins, insulin, and hormones. Means which he must use require institutions for skilled observation, nursing, and the ancillary services. The family doctor or general practitioner sees the *whole* being whom he knows when that being suffers from an infection, disorder, deformity, or any complaint; he sees that the whole or remainder has to compensate for a defect or failure.

He sees life as essentially projective, alert, and dynamic: that health, happiness, and harmony or fitness lie in the power of fitting body, mind, and soul to varied and changing environment, in the power of constructive incorporation of products of life or laboratory for defence or attack against menaces (power of immunity), in the power of overcoming speedily failures, lapses, or errors, and more; also in getting more fit or progressing to higher powers (greater intensity of effort, width of purpose, longer foresight, etc.). Health lies in such powers rather than perfection of anatomical form or function of organs; perfection of form without vital power, elasticity, and adaptability is of little value. Many seek advice because they are not well, or are tired, without any objective signs of defects of form. Cure is not a casting-off, but incorporation within of experiences and so of a greater fullness of life, by additions to constructive powers.

The organization of a medical service demands intimate liaison between the teaching hospitals as part of a university centre and the "practitioner" or small general hospitals where the family doctors are continuing day by day their postgraduate acquirement of up-to-date knowledge. It is of the greatest importance that this should be maintained in preference to a linkage to the nearest county council hospital because of the importance of diversity of methods in any district and of the value of comparison in results. The growth of the large county hospitals providing all medical services except those which are organized at special centres, the development of a type of cottage hospital too small and too poorly equipped to form a diagnostic clinic or an institution (such as that outlined in this letter), and the failure to organize the teaching hospitals and others into a university centre or pool have led to confusion. Co-ordination is obviously necessary, but in planning the patient and his family doctor must never be allowed to have any other position than priority over all other considerations.

It is important that the people or potential patients should understand the present trends and insist that they should have not only free choice but also the happiest opportunities of keeping fit, getting fit quickly if unfortunate, and getting more fit than ever before. The public must insist on the best ways of promoting the highest efficiency of their family doctors.—I am, etc.,

Teddington. P. W. L. CAMPS.

For a State Service

SIR,—I could wish that Dr. Mary Anderson (*Supplement*, Oct. 13. p. 84) had been with me a few weeks ago during a tour of a factory, where some of the employees were working by bargain and others on day work. I will not complete the story but proceed to the moral. The profit motive, so much decried by the righteous, is for all, except a very small minority, still the greatest spur to endeavour and enterprise. Human nature cannot be altered by either legislation or controls. Unfortunately, from idealism to hypocrisy is oftentimes no very far cry, and the latter gets us nowhere save into well-deserved trouble.—I am, etc.,

Wirksworth. E. D. BROSTER.

Returned Service M.O.s and the National Health Service

SIR,—Many medical officers returning from the Services hold completely different views from the British Medical Association regarding the National Health Service proposals. Politics may be responsible for the totally opposite views held by some, but I am very strongly of the opinion that, owing to their being out of direct touch with what has been going on in medico-politics at home, others have, unfortunately, not got a true picture of affairs.

I spoke recently with two colleagues who had just returned from the Forces, and the usual discussion about the proposed National Health Service took place. At first they had completely different views on this subject from me, but after I explained, in a rough and rapid way, why the B.M.A. had disapproved of certain of the Government's proposals and had approved of others, and in certain cases had advanced recommendations of its own, they began to see eye to eye with me. I suggest, therefore, that many doctors, owing to their absence on war service, have been unable to follow completely the technical points that have been discussed by the Association since the publication of the White Paper, and that arrangements should be made for periodic informal local meetings between the B.M.A. and returned Service doctors, so that any confusion of the position they may have may be clarified. Perhaps it could be arranged, in addition, for the central office to prepare a very simple précis of the essential points which have been discussed at different Representative Meetings and send a copy of this to each returning doctor. I am sure that such a document would be of great help in explaining the position and would be a very valuable factor in attaining professional unity, which is of paramount importance.

In order to illustrate the reason for this letter, may I say that one of the questions I was asked was: "Why do you —i.e., B.M.A.—disapprove of local authority control?" Such questions must not be allowed to remain unanswered.—I am, etc.,

Glasgow. J. T. MCCUTCHEON.

Domestic Help for Doctors

SIR,—Can anything be done to provide domestic help for doctors' houses? I would like to point out that our wives have no contract and are *not* paid by the Government to answer phone messages for National Health Insurance visits; and it is quite impossible for us to be out visiting and in the house at the same time. On the basis of our inadequate remuneration for panel patients we are unable to afford two shillings an hour for unskilled labour. By that I mean someone to be in the house to take a message in case a call comes. Our profession is supposed to do its best to serve the public, and our work ought to be of national importance, yet every obstacle is put in the way of our doing it. We don't strike; we stick it. The dockers' wives wouldn't stay in all day; why should ours?—I am, etc.,

Brighton. PAUL R. E. KIRBY.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. E. A. Bennet, at 99, Harley Street, W.1; Dr. J. M. Lees, at 41, Park Square, Leeds; Dr. F. L. McLaughlin, at 10, Merrion Square, Dublin; Mr. John C. Nicholson, F.R.C.S., at 62, Queen Anne Street, W.1; Dr. W. G. A. Swan, M.R.C.P., at 13, Portland Terrace, Newcastle-upon-Tyne 2, from Nov. 1; Mr. D. S. Poole Wilson, F.R.C.S., at 24A, St. John Street, Manchester.

H.M. Forces Appointments

ARMY

Col. (Temp. Major-Gen.) J. C. A. Dowse, C.B.E., M.C., late R.A.M.C., having completed four years in the rank is retained on the Active List supernumerary.

Col. (Temp. Major-Gen.) J. G. Gill, C.B.E., D.S.O., M.C., late R.A.M.C., has relinquished the temporary rank of Major-Gen.

Col. C. D. M. Buckley, M.C., late R.A.M.C., having completed four years in the rank, is retained on the Active List, supernumerary.

Lieut.-Cols. G. H. Haines, M.C., and F. McKibbin, O.B.E., from R.A.M.C., to be Cols.

Major J. E. M. Boyd, M.C., retired pay, R.A.M.C., has been restored to the rank of Lieut.-Col. on ceasing to be employed, and has been granted the honorary rank of Col.

ROYAL ARMY MEDICAL CORPS

Short Service Commission.—War Subs. Major J. A. Scott has resigned his commission.

REGULAR ARMY RESERVE OF OFFICERS

Col. A. D. Stirling, D.S.O., late R.A.M.C., has reverted to retired pay on ceasing to be employed, and has been granted the honorary rank of Brig.

TERRITORIAL ARMY

ROYAL ARMY MEDICAL CORPS

Lieut.-Col. R. I. Poston, T.D., has relinquished his commission on account of disability, and has been granted the honorary rank of Col.

War Subs. Lieut.-Cols. N. Heath and J. P. Raban to be Majors.

War Subs. Majors C. A. Ferguson and R. K. Hanlin to be Majors.

War Subs. Major R. B. Lumsden to be Capt.

Capt. I. B. Speight to be Major.

War Subs. Capts. E. M. K. Jellicoe and G. W. Thomas to be Capts.

Capt. J. W. M. Sutherland has resigned his commission. (Substituted for the notification in a *Supplement* to the *London Gazette* dated Nov. 24, 1944.)

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Major J. MacFarlane has relinquished his commission on account of disability, and has been granted the honorary rank of Lieut.-Col.

War Subs. Major H. E. Brown has relinquished his commission on account of disability, and has been granted the honorary rank of Major.

War Subs. Capts. M. Burke and H. Baker have relinquished their commissions on account of disability, and have been granted the honorary rank of Major.

War Subs. Capts. R. Ormiston, W. F. D. Benton, F. I. Herbert, R. D. H. Maxwell, and G. H. McCracken have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

2nd Lieut. D. S. Kettle, from Non-medical section, to be Lieut.

H. V. Sankarayya to be Lieut. (Substituted for the notification in a *Supplement* to the *London Gazette* dated Jan. 31, 1941.)

E. Rosenbaum to be Lieut.

ROYAL AIR FORCE

RESERVE OF AIR FORCE OFFICERS

Wing Cmdr. (Temp.) R. G. James, O.B.E., has been granted the rank of War Subs. Wing Cmdr.

ROYAL AIR FORCE VOLUNTEER RESERVE

Fl. Lieuts. A. Jamieson and R. Boggon have relinquished their commissions on account of medical unfitness for Air Force service, retaining their rank.

Fl. Lieut. A. E. M. Stevenson has relinquished his commission on account of medical unfitness for Air Force service.

To be Flying Officers (Emergency): T. T. Fulton and W. H. McDaniel.

POSTGRADUATE NEWS

DETAILED PROSPECTUSES SENT ON APPLICATION

E. & S. Livingstone Ltd. Edinburgh

NOTICE—Applications for vacancies advertised should, except where otherwise specified, state name, address, age, nationality, qualifications, and be accompanied by copies of 3 recent testimonials with short statement of experience and appointments held. Unless closing date is stated applications should be sent at once.

R—Male, W—Woman practitioners, liable to military service under the National Service Acts.
B1—Whole-time appointments, usually resident within the senior establishments—e.g., Registrar, R.S.O., etc.
A—Whole-time resident house appointments open to practitioners without previous experience.
B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of women medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

CITY OF PLYMOUTH. City General Hospital.—Applications are invited from duly qualified and registered medical practitioners, male and female, including practitioners within three months of qualification and liable under the National Service Acts, for the appointment of JUNIOR ASSISTANT MEDICAL OFFICER (A) at the City General Hospital. The appointment will be for a period of six months, but terminable by one month's notice on either side at any time. Salary will be at the rate of £250 per annum, plus war bonus and full residential emoluments. All fees received by the Officer must be refunded to the Council. The duties of the post will be chiefly on the surgical wards of the hospital, and further details may be obtained from the Medical Superintendent. Forms of application are not provided. Applications must be addressed to the undersigned as soon as possible.—T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF LIVERPOOL. Belmont Road Hospital, Belmont Road, Liverpool, 6 (1,930 beds). RESIDENT ASSISTANT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male and female, for the above appointment, including R and W practitioners who now hold A posts. If held by an R or a W practitioner, the appointment will be limited to six months, otherwise it will be for a period of twelve months. The hospital is mainly for the treatment of chronic sick and infirm. There is also a large department for the treatment of skin diseases. The salary is at the rate of £350 per annum with full residential emoluments and cost-of-living bonus. All fees received in connexion with the appointment to be handed over to the City Council. The appointment will be made in accordance with the Standing Orders of the City Council and will be determinable by one month's notice on either side. Applications, stating whether R or W practitioner, should be endorsed "Resident Medical Officer," and sent to the undersigned forthwith.—W. H. Baines, Town Clerk, Municipal Buildings, Dale Street, Liverpool, 2.

CITY OF STOKE-ON-TRENT. City General Hospital. ASSISTANT RESIDENT MEDICAL OFFICERS.—Applications are invited from registered medical practitioners (single—male or female) including R and W practitioners who now hold A posts, for two appointments of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to R practitioners, the appointments will be limited to a period of six months, otherwise they will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus with full residential emoluments. The hospital, which is an emergency hospital, has approximately 1,200 beds and there is excellent scope for medical, surgical and obstetrical work. Applications, endorsed "Medical Officer—City General Hospital," should be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

CITY OF CARLISLE. City General and Fusehill Emergency Hospitals, Carlisle (100 civilian beds and 180 E.M.S.).—Applications are invited for the following appointment:—JUNIOR RESIDENT MEDICAL OFFICER (A) to assist in care of civilian beds and for orthopaedic and general surgical duties in the adjacent E.M.S. Fracture "A" Hospital. Practitioners within three months of qualification who are liable for service under National Service Acts may apply. Appointment will be for a period of six months from November 1, 1945. Salary £200 per annum, with full residential emoluments. Applications should be sent to the Acting Medical Officer of Health, 22, Fisher Street, Carlisle, as early as possible.

COUNTY BOROUGH OF WEST HAM. MEDICAL OFFICER OF HEALTH AND SCHOOL MEDICAL OFFICER.—Applications are invited from qualified medical men (including those in H.M. Forces) holding a Degree in or Diploma of Public Health, for the appointment of Medical Officer of Health and School Medical Officer, at a salary of £1,500 per annum, plus bonus, rising by annual increments of £50 to a maximum of £1,750 per annum, inclusive of all fees and emoluments. Applicants must be fully qualified to carry out and perform all the duties of Medical Officer of Health and School Medical Officer, and appertaining to the medical services of the Council, including those as Administrative Officer under the Mental Deficiency Acts, and such other duties as may from time to time be prescribed by the Council. The appointment will be subject to the approval of the Ministries of Health and Education, and will be terminable on three months' notice on either side. The person appointed will be required to devote his whole time to the duties of the office, and to pay over to the Council all moneys received by him in connection with the appointment from whatever source such moneys are received. He must not engage in private practice nor accept any other appointment except with the consent of the Council. The appointment will also be subject to the provisions of the Local Government Superannuation Act, 1937, and to a medical examination as required by the Council for the purposes of that Act, and the statutory contributions to the Superannuation Fund under the Act will be deducted from the salary. Applications on the form provided (which will be forwarded by the undersigned on receipt of a stamped addressed foolscap envelope) must reach me not later than noon on Saturday, February 28, 1946. Canvassing members of the Council is prohibited and will disqualify.—Charles E. Cranfield, Town Clerk, Town Hall, West Ham, E.15.

COUNTY BOROUGH OF BIRKENHEAD. Department of the Medical Officer of Health, Birkenhead Municipal Hospital. RESIDENT SURGICAL OFFICER (B1) (male or female).—Applications are invited from registered medical practitioners for the appointment of Resident Surgical Officer at the Birkenhead Municipal Hospital, which will shortly become vacant. The appointment is tenable for a period not exceeding twelve months. The duties of a Resident Surgical Officer are mainly surgical and obstetrical, and preference will be given to candidates who have had surgical and obstetrical experience in a municipal or voluntary hospital. Suitably qualified R and W practitioners now holding B2 appointments may apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C., or for other reasons are not eligible for military service. Alien practitioners will be eligible for appointment. The salary attached to the appointment will be at the rate of £300 per annum, plus war bonus, and the appointment will be subject to the regulations of the Council regarding holidays, sick pay, etc. Forms of application and further particulars relating to the appointment may be obtained from the Medical Officer of Health, Dr. D. Morley Mathieson, 9, Hamilton Square, Birkenhead, to whom they should be returned as soon as possible, endorsed "Resident Surgical Officer."—E. W. Tame, Town Clerk.

COUNTY BOROUGH OF IPSWICH. Borough General Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of RESIDENT ASSISTANT MEDICAL OFFICER (B1). Applicants should have held house appointments and had surgical experience. Salary at the rate of £350 per annum, plus full residential emoluments. Suitably qualified R practitioners holding B2 appointments, also those holding B1 and rejected by the R.A.M.C., may apply. Applications to the Medical Officer of Health, Public Health Department, Elm Street, Ipswich.

CITY OF BRADFORD.—Applications are invited for the permanent position of MEDICAL OFFICER OF HEALTH of the City at a salary of £1,750 a year, rising by annual increments of £50 to £2,000. The person appointed must devote his whole time to the service of the Council, and a copy of the duties required to be performed may be obtained on application to the undersigned. The appointment is subject to the Local Government Superannuation Act, 1937, and the successful candidate will be required to undergo a medical examination. Applications should reach me not later than February 28, 1946. Candidates serving overseas may furnish the names of three referees in lieu of forwarding copies of testimonials, and should indicate where a telegram, or cable, will reach them if selected for interview. The consent of the Minister of Health has been obtained to the making of this appointment. Canvassing will be a disqualification.—N. L. Fleming, Town Clerk, Town Hall, Bradford.

CITY OF BIRMINGHAM MENTAL HOSPITALS. Winson Green Division.—Applications are invited for the post of DEPUTY MEDICAL SUPERINTENDENT at a commencing salary of £625 per annum, plus residential emoluments consisting of unfurnished flat, fuel, light, central heating and laundry, valued for superannuation purposes at £120 per annum. In addition, there is a war bonus of £47 0s. 5d. per annum. Applicants must have had several years' mental hospital experience and must possess a Diploma in Psychological Medicine. Practical experience in Psychotherapy will be a recommendation. The candidate appointed will be required to pass a medical examination and to contribute under the Asylums Officers' Superannuation Act, 1909. He must devote the whole of his time to the duties of the office and will not be allowed to engage in any other work. The appointment is subject to one month's notice on either side, and the successful candidate will be required to serve in such Institutions belonging to the Mental Hospitals Committee as they may from time to time direct. Applications, including those from medical practitioners serving in His Majesty's Forces, must be addressed to the Medical Superintendent, Winson Green Mental Hospital, Birmingham, 18, so as to be received not later than March 1, 1946. The appointment will not be made before April 1, 1946.

CITY OF PORTSMOUTH, St. Mary's Hospital (1,200 beds).—Applications are invited from male registered practitioners for the appointment of a RESIDENT MEDICAL OFFICER (B2), now vacant, including R practitioners who now hold A posts. If held by an R practitioner (liable under the National Service Acts) the appointment will be limited to a period of six months, otherwise it will be for a period of twelve months. The salary is at the rate of £300 per annum, with residential emoluments valued at £150 per annum, and a temporary cost-of-living bonus, at present payable at the rate of £29 18s. per annum. Application forms may be obtained from and must be returned to the Medical Officer of Health, Municipal Offices, 1, Western Parade, Southsea.—Frederick Sparks, Town Clerk.

COUNTY BOROUGH OF ROCHDALE.—Applications are invited for the post of TEMPORARY WHOLE-TIME ASSISTANT MEDICAL OFFICER OF HEALTH from registered medical practitioners not already in whole-time Public Health employment. The duties are mainly in connexion with the Child Welfare Section, and will include work in the School Medical Service and Female Venereal Diseases Clinics The salary will be on the scale £500, rising by £25 to £700 (commencing according to experience) plus bonus at present £110 per annum. Applicants, male or female, should have experience in the branches mentioned, and preference will be given to holders of the Diploma in Public Health or similar qualification. Forms of application may be obtained from the Medical Officer of Health, Public Health Offices, Rochdale, and must be returned to him, accompanied by copies of any recent testimonials, and endorsed Temporary Assistant Medical Officer, as early as possible.

COUNTY BOROUGH OF SOUTHEND-ON-SEA. Southend Municipal Hospital, Rochford, Essex. RESIDENT HOUSE MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident House Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be tenable for a period of six months, otherwise for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments, valued at £100 per annum, plus cost of living bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officers' Superannuation Acts are applicable. The post is now vacant and applications should be addressed immediately to the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex.—Archibald Glen, Town Clerk, Town Clerk's Office, Southend-on-Sea.

COUNTY BOROUGH OF HALIFAX. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH for Maternity and Child Welfare (female).—Applications are invited from fully qualified medical women for the above appointment. Candidates already in whole-time Public Health employment by local authorities are not eligible. Salary scale £500 per annum, rising by annual increments of £25 to a maximum of £700 per annum. Commencing salary will be fixed in accordance with candidate's experience. The appointment will be terminable by one month's notice from either side. Applications must be received by the undersigned forthwith.—G. C. F. Roe, Medical Officer of Health, Public Health Department, Powell Street.

IMPORTANT—All applicants should read the notice at the top of page 10 about qualifications required.

ESSEX COUNTY COUNCIL. TEMPORARY ASSISTANT COUNTY MEDICAL OFFICER OF HEALTH.—The County Council invite applications from registered medical practitioners possessing experience of administrative work for the above whole-time temporary appointment on the Central Staff of the Council's Public Health Department. The duties of the Officer will be chiefly to assist in the administration of hospitals, sanatoria, public assistance establishments, and the tuberculosis services of the Council. Remuneration at the rate of £650 a year, rising, subject to satisfactory service, by annual increments of £25 to £700 a year, together with such war bonus as may be decided by the Council from time to time, will be paid for this appointment. Applications (on the prescribed form obtainable from the undersigned), accompanied by copies of not more than three recent testimonials, which will not be returned, should be addressed to me and delivered at the County Hall, Chelmsford, not later than November 12, 1945. Full information should also be given as to the applicant's position in relation to military service. Canvassing, directly or indirectly, is forbidden. This advertisement is published with the approval of the Minister of Health.—John E. Lightburn, Clerk of the County Council, County Hall, Chelmsford.

ESSEX COUNTY COUNCIL. St. Margaret's Hospital, Epping. HOUSE OFFICER (B2).—Applications are invited from registered medical practitioners, male and female, including R and W practitioners who now hold A posts, for the appointment of House Officer (B2) at the above hospital. The salary is at the rate of £200 per annum, with full residential emoluments. If held by an R practitioner the appointment will be limited to six months, otherwise it will not exceed one year. Applications should be made in writing to the County Medical Officer, County Hall, Chelmsford.

EAST RIDING COUNTY COUNCIL. Beverley Emergency Hospital.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A) vacant immediately, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months, otherwise it will be for a period not exceeding one year subject to one month's notice on either side. The salary is at the rate of £120 per annum with full residential emoluments. Applications to be made as soon as possible to the undersigned.—T. Stephenson, Clerk of the Council, County Hall, Beverley.

KENT COUNTY COUNCIL, County Hospital, Chatham. TEMPORARY RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners of either sex for the above appointment, including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Otherwise it will not exceed one year. Applicants should have held house appointments and had experience in general duties. The salary is £300 a year, with full residential emoluments, plus a temporary war addition at present £29 19s. 7d. a year for males and £24 2s. 4d. for females. Applicants should state the names and addresses of two responsible persons to whom reference may be made as to professional ability, and should be addressed to the County Medical Officer, County Hall, Maidstone, so as to reach him by November 20, 1945.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

KENT COUNTY COUNCIL, Public Health Department, Venereal Diseases Clinic, Tunbridge Wells.—Applications are invited from registered medical practitioners (male) for the part-time appointment of ASSISTANT MEDICAL OFFICER at the above-named Clinic. Remuneration will be at the rate of £2 12s. 6d. a session, plus travelling expenses. Applications, together with the names and addresses of two responsible persons to whom reference may be made as to professional ability, to be sent to the County Medical Officer, County Hall, Maidstone.—W. L. Platts, Clerk of the County Council, County Hall, Maidstone.

SURREY COUNTY COUNCIL, St. Helier County Hospital, Carshalton (862 beds).—Applications are invited from registered practitioners, male and female, for the appointment of a JUNIOR OBSTETRIC MEDICAL OFFICER (B2) (including gynaecological duties), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will not exceed one year. Salary is at the rate of £250 per annum, plus full residential emoluments and war bonus. Apply to the Medical Superintendent by November 7, 1945.

MIDDLESEX COUNTY COUNCIL.—TUBERCULOSIS OFFICER required for TOTTENHAM CHEST CLINIC. Unestablished staff with possibility of becoming established when all unestablished posts come up for revision. Salary £1,000 by £50 to £1,250 per annum, plus bonus. In the case of men or women showing exceptional ability, increments may be extended to £1,500. Written applications stating age, qualifications, experience, with copies of up to three recent testimonials, to the undersigned by December 10, 1945. Consent of Ministry of Health has been obtained for the appointment.

MIDDLESEX COUNTY COUNCIL. JUNIOR ASSISTANT MEDICAL OFFICER (B2, Resident) required at CLARE HALL COUNTY HOSPITAL, South Mimms, Middx. (540 beds for tuberculosis).—Applications invited from registered medical practitioners, including R and W practitioners who now hold A posts. Salary £250 per annum plus war bonus (now £60 per annum, proportion only paid in cash). Board, lodging and laundry. Whole-time duties such as Council may require under supervision of Medical Director. Appointment, subject to medical examination and one month's notice, is for six months, with possibility of extension to twelve months (except in case of R practitioners). Post vacant mid-November. Application to Medical Director of Hospital. Application forms not provided. Closing date November 10, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

MIDDLESEX COUNTY COUNCIL.—Applications invited from duly qualified medical practitioners for the undermentioned appointment:—DISTRICT MEDICAL OFFICER for WILLESDEN (No. 2) medical relief district, unestablished, non-pensionable. Salary £300 per annum and as war-time measure only a payment equivalent to 20% of salary in respect of additional practice expenses, plus cost of expensive drugs, confinement fees, services of medical practitioner to administer short anaesthetics for minor operations. Duties in accordance with Public Assistance Order, 1930, of the Minister of Health, to reside in, or alternatively provide a surgery in, the district and to nominate a deputy to act in case of unavoidable absence. Applications to the undersigned by November 17, 1945.—C. W. Radcliffe, Clerk of the County Council, Middlesex Guildhall, Westminster, S.W.1.

URBAN DISTRICT COUNCIL OF POTTERS BAR, Middlesex.—Applications are invited from duly qualified medical practitioners for the appointment of a TEMPORARY PART-TIME MEDICAL OFFICER OF HEALTH. The consent of the Minister of Health has been obtained to the making of this appointment and attention is drawn to paragraph 5 of the Circular of the Ministry of Health No. 62/45. The salary is £150 per annum with £20 per annum in addition for travelling expenses. The appointment will be terminable by one month's notice on either side. Applications to be sent to me as early as possible.—T. T. Thorpe, Clerk of the Council, Council Offices, Darkes Lane, Potters Bar, Middlesex.

WEST SUSSEX COUNTY COUNCIL. St. Richard's (Public Health) Hospital, Chichester.—Applications are invited from registered medical practitioners, male or female, for the post of ASSISTANT MEDICAL OFFICER (B1) at this hospital. R and W practitioners now holding B2 appointments may apply. Applications from R practitioners cannot be considered unless they have been rejected by the R.A.M.C. Duties mainly medical and receiving ward. Salary £350 per annum, plus war bonus (at present time, male £30, female £24 per annum) and full residential emoluments. Applications to be sent to the Medical Superintendent.

ADDENBROOKE'S HOSPITAL, Cambridge. RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners for the appointment of Resident Surgical Officer (B1) to become vacant on January 10, 1946. Applicants should have held house appointments and had surgical experience. Preference will be given to candidates holding the Diploma of F.R.C.S. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C Salary is at the rate of £350 per annum. Applications to the undersigned not later than Wednesday, November 14, 1945.—J. A. Beardsall, Secretary-Superintendent.

BECKETT HOSPITAL AND DISPENSARY, Barnsley. HOUSE SURGEON (A).—Applications are invited from registered medical practitioners for this appointment. Salary is at the rate of £225 per annum with full residential emoluments. Practitioners within three months of qualification who are liable to service under the National Service Acts may also apply, when the appointment will be for six months. Applications should be sent immediately to Arthur L. Bourne, Secretary-Supt.

BOLTON ROYAL INFIRMARY (270 beds). Resident medical staff, 6.—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE PHYSICIAN (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, appointment will be limited to six months. Salary £200 per annum, with full residential emoluments. Applications to be forwarded to the undersigned.—Joseph Griffith, Superintendent Secretary.

BURTON-ON-TRENT GENERAL INFIRMARY (200 beds normal).—Applications are invited from registered medical practitioners for the appointment of CASUALTY OFFICER AND HOUSE SURGEON (A). Salary at the rate of £200, with the usual residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months. Applications to be sent to the Secretary-Superintendent.

BIRMINGHAM UNITED HOSPITAL. The General Hospital. The Queen Elizabeth Hospital. (Also incorporating the Queen's Hospital, 1840-1941.) Teaching Hospital of 1,000 beds. (In association with Birmingham University).—Vacancies on the Honorary Medical and Surgical Staff will shortly arise for the following appointments:—3 ASSISTANT PHYSICIANS, 4 ASSISTANT SURGEONS.

Assistant Physicians are required to be graduates in medicine of a University of which the degree is recognized by the General Medical Council for registration and Fellows or Members of the Royal College of Physicians in London. Assistant Surgeons are required to be Fellows of the Royal College of Surgeons of England. Candidates elected from the Services may be allowed one year from the time of taking up their duties to obtain the higher qualifications required by the laws of the hospital. An honorarium of £50 per annum is at present attached to these posts, but revision of the conditions of service and remuneration to members of the Staff may become necessary in the event of new legislation for a National Medical Service. Candidates are invited to submit applications to the undersigned, from whom all further information may be obtained. Applications, which must be submitted not later than March 1, 1946, will be considered in the first instance by a Special Committee representing the Hospital and the Faculty of Medicine of the University, and its recommendations will be submitted to the Board of Management of the Hospital.—G. Hurford, Secretary, Birmingham United Hospital, The Queen Elizabeth Hospital, Birmingham, 15.

BOLTON ROYAL INFIRMARY, Lancashire (270 beds). Resident medical staff, 6.—Applications are invited from registered medical practitioners for the appointment of ASSISTANT RESIDENT SURGICAL OFFICER (B1). Experience in surgery and house appointments essential. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they are not eligible for service in H.M. Forces. Commencing salary £275 per annum, with full residential emoluments. In the first place the appointment will be for one year. Applications to be forwarded to the undersigned.—Joseph Griffith, Superintendent Secretary.

BOSTON GENERAL HOSPITAL, Boston, Lincs. HONORARY EAR, NOSE AND THROAT SURGEON.—The Committee invite applications for this appointment from candidates prepared to engage only in consulting ear, nose and throat practice. The appointment will not be filled for four months from the date of this advertisement to enable officers serving abroad to apply. Further particulars may be obtained from the undersigned to whom applications should be addressed.—B. Haines, Secretary.

BOLTON ROYAL INFIRMARY (270 beds—Resident Medical Staff, 6).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant now, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months Salary £175 per annum, with full residential emoluments. Applications to be forwarded to the undersigned.—Joseph Griffith, Superintendent-Secretary.

THE BURSLEM HAYWOOD AND TUNSTALL WAR MEMORIAL HOSPITAL, High Lane, Tunstall, Stoke-on-Trent.—Applications are invited from registered medical practitioners, male and female (including R practitioners who now hold A posts) for the post of HOUSE SURGEON (B2). If held by an R practitioner the appointment will be limited to six months. Salary is at the rate of £225 per annum, with full residential emoluments. Applications should be forwarded as soon as possible to C. E. Lowndes, Secretary

CITY GENERAL HOSPITAL, Gloucester (450 beds). (There is a Fracture A Department Plastic and Facio-maxillary Surgery Department, general, medical and surgical work, etc., at this hospital). A post will become vacant immediately for a JUNIOR MEDICAL OFFICER (B2).—Applications from male and female registered practitioners are invited, including R and W practitioners who now hold A posts. If held by an R practitioner, appointment will be limited to six months, otherwise it will not exceed one year. Salary £350, with full residential emoluments. Applicants must have had six months' postgraduate at the time of taking up the appointment. Previous experience in fracture work would be an advantage though not essential. Applications, stating when duties could be taken up, should be sent to the Medical Superintendent, City General Hospital, Gloucester.

CAMBORNE-REDRUTH MINERS' AND GENERAL HOSPITAL, Redruth.—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A), vacant immediately. Salary at the rate of £200 per annum, with the usual residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months. Applications to be addressed to J. C. Field, Secretary-Superintendent, Redruth.

IMPORTANT—All applicants should read the notice at the top of page 10 about qualifications required.

CROYDON GENERAL HOSPITAL, Surrey (A voluntary hospital of 200 beds).—Applications are invited from registered medical practitioners for the appointment of CASUALTY OFFICER (B2), to commence duty immediately, including R practitioners who now hold A posts. Carroll, Superintendent and Secretary.

IMPORTANT—All applicants should read the notice at the top of page 10 about qualifications required.

WARWICKSHIRE HOSPITALS COUNCIL. VISITING MEDICAL STAFF.—The Warwickshire Hospitals Council invites applications from registered medical practitioners holding appropriate qualifications for the following appointments on the Senior Medical Staff of the Coventry and Warwickshire Hospital, Coventry. Each appointment is remunerated, and the successful candidates will be required to practise exclusively as Consultants in their respective specialities:—

ONE GYNAECOLOGICAL AND OBSTETRIC SURGEON. Salary at the rate of £500 per annum.

ONE (additional) OPHTHALMIC SURGEON. Salary at the rate of £750 per annum (there is already one Ophthalmic Surgeon on the Hospital staff).

ONE ORTHOPAEDIC SURGEON. Salary at the rate of £750 per annum (the Fracture and Traumatic Services of the Hospital are under the direction of a Director of Accident Services; the candidate appointed to the post of Orthopaedic Surgeon will be responsible for the Orthopaedic Service only, but must have some experience in fractures and traumatic surgery).

TWO EAR, NOSE AND THROAT SURGEONS. Salary (each) at the rate of £500 per annum.

TWO RADIOLOGISTS (full-time), one in charge of X-ray Diagnostic Services and one in charge of X-ray Therapeutic Services. Salary (each) at the rate of £1,200 per annum, rising by four annual increments of £200 to a maximum of £2,000 per annum; with ability to receive private patients at the Hospital. Fees for private patients to be shared as to 1/3 to the Hospital.

Each appointment, which will be for a period of five years in the first instance, is subject to the terms and conditions of an Agreement of Service, copies of which may be obtained from the undersigned.

Applications from Service candidates are invited and the above appointments (together with the terms and conditions of the Agreement of Service) are being notified to the Directors-General at the Admiralty, the War Office and the Air Ministry, in order that they may be brought to the notice of medical officers through Service channels. Applications, giving full details as to age, medical training, experience and qualifications, and accompanied by copies of testimonials, must be received not later than March 1, 1946. The successful candidates will be required (subject to release from H.M. Forces of any Service candidate appointed) to take up their appointments on June 1, 1946.—S. Cecil Hill, Warwickshire Hospitals Council, Coventry and Warwickshire Hospital, Coventry.

WEST LONDON HOSPITAL, Hammersmith, W.6. HOUSE SURGEON (A).—Applications are invited for the above appointment to become vacant on December 1, 1945, from registered medical practitioners, male and female, including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment will be for six months and may be terminated by one month's notice on either side. Salary at the rate of £100 a year with the usual residential emoluments. Applications should reach me not later than Tuesday, November 13, 1945.—H. A. Madge, Secretary.

WEST NORFOLK AND KING'S LYNN GENERAL HOSPITAL.—Applications are invited for the appointment of HONORARY VISITING OPHTHALMIC SURGEON. Practitioners serving with H.M. Forces are invited to apply. Must reside in or near King's Lynn. Applications should be addressed to the undersigned not later than March 10, 1946.—Joseph E. Searjeant, F.C.C.S., House Governor, King's Lynn General Hospital, King's Lynn.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant immediately, whose main duties are in the Eye, Ear, Nose, and Throat Department (37 beds with busy Out-patient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. This post is recognized for D.O.M.S. and D.L.O. examinations. Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary.

PERSONAL

ANNUITIES almost tax-free for RETIREMENT, expert advice on best rates and conditions gratis. Young Practitioners should inquire re "Composite Contract," assuring five crucial features.—F. W. Hartley and Co., Annuity Specialists, 65-66, Chancery Lane, London, W.C.2.

NOTICES

APPLICANTS ARE ADVISED not to send original testimonials when replying to advertisements. Copies will answer the purpose quite as well, and in the event of their being lost or mislaid no inconvenience will ensue

THE FACT THAT GOODS made of raw materials in short supply owing to war conditions are advertised in this *Journal* should not be taken as an indication that they are necessarily available for export.

THE ROGERS PRIZE. (Joseph Rogers; administered by The Society of Apothecaries of London.).— This prize, representing the accumulated income from the investment of a legacy given by the will of Dr. Joseph Rogers, deceased (after payment of any expenses incurred in the administration), will be awarded by the Trustees, the President of the Royal College of Physicians and the Master of the Worshipful Society of Apothecaries of London, "to such person as in their opinion shall have written the best or only good essay on the treatment of the sick poor of this country and the preservation of the health of the poor in this country or either of such subjects," power being reserved to the Trustees to withhold the award of the prize if no essay shall have been submitted which in their opinion merits a prize. The competition is an open one; the treatment of the subjects and the length of the essay are left to the discretion of the essayist. The essay must be typewritten, and must not have been previously published. If subsequently published the essay must be described as the Joseph Rogers Prize Essay. Persons desirous of competing for the prize, which it is estimated will amount to about £150, are invited to submit essays, which must be forwarded to the undersigned not later than May 1, 1946. Essays should be signed with a motto or other nom-de-plume. The decision of the Trustees as to the award or withholding of the prize shall be final and conclusive, and will be duly notified in the Public Press.

There are no conditions beyond those stated above.—Ernest Busby, Clerk to the Trustees, Apothecaries' Hall Black Friars Lane, London, E.C.4.

BELGIAN FIRM, well introduced chemists and druggists, first-class sales organization, wants to act as AGENT OR EXCLUSIVE BUYER for pharmaceuticals and medicinal preparations in Belgium, Holland, Luxembourg, and Scandinavia.—Please apply to Laboratoires Pantha, Brussels (Belgium), 51, Rue du Poincon.

Applications, which must be received not later than November 21, 1945, should be sent to the Chief Inspector of Factories, 8, St. James's Square, London, S.W.1.

UNIVERSITY OF DURHAM. King's College, Newcastle-upon-Tyne.—Applications are invited for the following whole-time appointments:—(*a*) LECTURER IN PATHOLOGY to dental students; (*b*) LECTURER IN PHYSIOLOGY to dental students. The appointments will be temporary in the first instance and will be re-advertised in due course, when the holders will be entitled to submit an application. Teaching experience and a medical qualification, while not essential, would be an advantage. Salary £650 to £850 according to qualifications and experience. Federated Superannuation Scheme. The successful applicants will be required to take up their duties on January 7, 1946, or if now serving in H.M. Forces or other National Service on release. Applications, with the names of not more than three persons to whom reference may be made, should be sent not later than November 24, 1945, to the undersigned, from whom further particulars may be obtained.—G. R. Hanson, Registrar of King's College, Newcastle-upon-Tyne.

UNIVERSITY OF BRISTOL.—The University invites applications for the following full-time posts in the Faculty of Medicine:—A LECTURER (Grade II) in ANATOMY, salary £650. A LECTURER (Grade II) in PHYSIOLOGY, salary £650. A LECTURER (Grade II) in PATHOLOGY, salary £500-£600, according to qualifications and experience A LECTURER (Grade I) in MEDICINE, salary £900. A LECTURER (Grade I) in OBSTETRICS, salary £900. A LECTURER (Grade I) in BACTERIOLOGY, salary £900. A LECTURER (Grade I) in PREVENTIVE MEDICINE, salary £1,000. A LECTURER (Grade I) in CLINICAL PATHOLOGY, salary £1,000. Practitioners serving in H.M. Forces are invited to apply.

Applications should reach the undersigned, from whom further particulars may be obtained, not later than February 27, 1946.—Winifred Shapland, Secretary and Registrar.

UNIVERSITY OF BIRMINGHAM. FACULTY OF MEDICINE. FULL-TIME CLINICAL CHAIRS.—Applications are invited for full-time PROFESSORSHIPS in the following subjects:—MEDICINE, SURGERY, GYNAECOLOGY, PAEDIATRICS. Practitioners serving in H.M. Forces are invited to apply. Salary in each case £2,500. Further particulars may be obtained from the undersigned, to whom applications should be sent not later than February 28, 1946.—C. G. Burton, Secretary, The University, Edmund Street, Birmingham, 3.

DIPLOMA IN MEDICAL RADIOTHERAPY
R.C.P. AND S. ENG.

COURSE OF INSTRUCTION IN MANCHESTER. The regulations for the Diploma require a course of study extending over two years. During the first nine months candidates are required to attend a course of systematic instruction. The rest of the time must be spent in the Radiotherapeutic Department of a recognized hospital. To meet these requirements a course of instruction will begin at the Holt Radium Institute, Manchester, early in January, 1946. Lectures and practical demonstrations will be given in the following subjects:—Physics as applied to Radiotherapy, W. J. Meredith and Physics Staff; Biological Effects of Radiation, Dr. Edith Paterson and Dr. W. M. Dale; Pathology in Relation to Radiotherapy, Prof. S. Baker and Dr. H. Russell; Principles and Practice of Radiotherapy, Dr. Ralston Paterson and Radiotherapy Staff. Inclusive fee 50 guineas. Thereafter it is hoped that paid posts will be found for candidates in Radiotherapeutic departments where they may complete the attendance required by these regulations. Further information may be obtained from the Dean of the Medical School, University of Manchester, to whom all applications must be sent. All applicants will be required to attend for interview before being accepted for the course. Special consideration will be given to practitioners being demobilized. Service candidates may be eligible for grants under the post-graduate education scheme.

DIPLOMA IN PUBLIC HEALTH. THE ROYAL INSTITUTE OF PUBLIC HEALTH AND HYGIENE.—The Course of Instruction may be commenced at any time. A prospectus and full particulars can be obtained from the Secretary, 28, Portland Place, London, W.1. Telephone: LANGham 2731-2.

LONDON SCHOOL OF HYGIENE AND TROPICAL MEDICINE. Incorporating The Ross Institute. COURSE OF INSTRUCTION IN TROPICAL MEDICINE AND HYGIENE.—The next course of instruction will open on January 7, and close on May 24, 1946. It will include instruction in Clinical Medicine, Parasitology, Bacteriology, Pathology, Physiology and Hygiene in relation to the aetiology, diagnosis and prevention of tropical diseases, and is designed primarily to prepare qualified medical practitioners for the examination of the Conjoint Examination Board for the Diploma in Tropical Medicine and Hygiene. The fee for the whole course is £40, exclusive of the examination fee payable to the Conjoint Examination Board.

Applications for admission to the course, or requests for further information should be sent to The Registrar, London School of Hygiene and Tropical Medicine, Keppel Street, London, W.C.1.

DIETETIC, DISPENSING, TYPING, SECRETARIAL, RECEPTION, ETC.

None of the vacancies for women advertised in these columns relates to a woman between the ages of 18 and 40 inclusive, unless she is exempted from the provisions of the Control of Engagement Order, 1945, or the vacancy is for employment excepted from the provisions of that Order.

WANTED, full time DISPENSER-BOOKKEEPER for partnership of three doctors. Salary up to £5 per week according experience.—Apply, Doctors Forsyth, Norman and Dudley, 41, Dowsett Avenue, Southend-on-Sea.

WANTED, ASSISTANT DISPENSER in mixed practice. Good salary.—Apply, stating age and experience, with recent reference, to Drs. Pretty, Notley and Radcliffe, Kettering.

WANTED, DISPENSER-SECRETARY, Hall certificate, for West Riding Yorkshire industrial practice. —Box 3819, B.M.J.

WANTED immediately experienced DISPENSER-BOOKKEEPER. Two partners. Somerset country town. Salary £5 per week.—Box 3843, B.M.J.

CHAUFFEUSE-RECEPTIONIST WANTED by consulting physician in London. Maintenance, some driving, office work, shorthand and typing desirable; state experience and full particulars.—Box 3833, B.M.J.

CAPABLE LADY requires situation MEDICAL RECEPTIONIST, not afraid responsibility. Passed Medical Receptionists' Institute Course, typing. Excellent references.—Box 3767, B.M.J.

DISPENSER-RECEPTIONIST REQUIRED for general practice, Clapton, London, E.5. State age, experience and full particulars. No Sunday work. Box 3824, B.M.J.

DEMOBILIZED W.R.N.S. officer seeks post as SECRETARY-BOOKKEEPER. Experienced typist, bookkeeper. Medical bookkeeper-secretary course taken.—Box 3795, B.M.J.

DOCTOR'S WIFE, 26, quiet, responsible; some nursing experience, can type, wants post RECEPTIONIST, near by Queen Anne-Harley Street area preferred, elsewhere considered.—Box 3780, B.M.J.

DOCTOR recommends SECRETARY-RECEPTIONIST, driver, 3 years' medical experience, seeking occupation, preferably Oxford area. Available immediately.—Box 3781, B.M.J.

DISPENSER-SECRETARY, full or part-time, required by doctor practising in North London.—Apply Box 3806, or 'phone LAB. 3858.

DISPENSER-SECRETARY (Hall), chauffeuse, bookkeeper, typist, etc., long experience, seeks post Cardiff or near.—Box 3779, B.M.J.

EDUCATED F.A.N.Y. requires post with professional man as RECEPTIONIST or RECEPTIONIST-SECRETARY. Experienced driving, typing; knowledge of bookkeeping. Tactful, with good commonsense. London preferred.—Box 3799, B.M.J.

EXPERIENCED SECRETARY (B.R.C.S.) requires country post with doctor; good references; car-driver; free shortly.—Box 3578, B.M.J.

LONDON COLLEGE OF PHARMACY for Women supplies Dispenser-Bookkeeper or Laboratory Technician. Training for Apothecaries Hall Assistants' Examination, and in Clinical Pathology. —Secretary, 7, Westbourne Park Road, W.2 (Bayswater 0969).

LADY with nursing experience seeks post doctor's RECEPTIONIST, London. Long experience medical and surgical work.—Box 3849, B.M.J.

LADY seeks post as SECRETARY-RECEPTIONIST. London. Experienced shorthand, typing and secretarial duties. Good ref.—Box 3821, B.M.J.

RECEPTIONIST requires POST with London doctor or dentist, aged 29, exempt, 1 yr. nurse Charing Cross Hospital, 3 yrs. Military Mobile V.A.D.—Box 3770, B.M.J.

REFINED YOUNG LADY, good education, 5 years' nursing experience, seeks post as RECEPTIONIST in doctor's house in or near London.—Write Box 3804, B.M.J.

WOMAN SECRETARY, aged 35, many years' secretarial experience, inc. 5 in biochemical research laboratory and 2 nursing in London hospital, desires creative work medical sphere. Expert shorthand-typing, medical manuscripts, office organization. Free December. Salary £360 p.a.—Box 3778, B.M.J.

YOUNG LADY requires post as SECRETARY-RECEPTIONIST in Central or South London area, 3 years' secretarial experience, 4 years' nursing experience.—S.R.N., 27e, Sydenham Hill, S.E.26.

YOUNG LADY desires part-time post as SECRETARY-RECEPTIONIST to doctor. Typing, fluent French, drive car, excellent references. Central London.—Box 3807, B.M.J.

YOUNG LADY, recently demobilized from B.R.C.S., requires post as PERSONAL SECRETARY, preferably to West End doctor or specialist, 5-day week.—Box 3769, B.M.J.

YOUNG LADY (25) requires post as RECEPTIONIST to specialist, G.P., or partnership of doctors, preferably Newcastle area. Previous experience.—Box 3827, B.M.J.

MISCELLANEOUS

WANTED, "HEALA" ELECTRIC LAMP. Ultra-violet and infra-red fitted. Serviceable. Table model or single clinical.—Box 3789, B.M.J.

WANTED, *Triumph Over Pain*, by René Fülöp-Miller.—Box 3788, B.M.J.

FOR SALE, complete X-RAY OUTFIT. Portable set, mobile tube stand, cassettes, screens, flouroscope, dark-room equipment, universal A.C./D.C. (rotary converter), suitable ordinary work, bones, joints, skull, chest, etc. Shockproof. Guaranteed perfect working order. £200.—Box 3815, B.M.J.

FOR SALE, Oxford Ether VAPORIZER, unused, £35. Also complete edition of Butterworth's *Encyclopaedia of Medical Practice*, with supplements, £20.—Box 3836, B.M.J.

FOR SALE, complete set of ophthalmic surgeon's test LENSES in original mahogany case, as new. What offers?—Box 3787, B.M.J.

FOR SALE, Haig-Ferguson AXIS-TRACTION FORCEPS, as new, price £6.—Box 3818, B.M.J.

FOR SALE, price £60, Hearson MICROSCOPE, 3-nosed objective, with 4 m. 16 mm. lense, (Beck) and Watson 1/12" oil-immersion lense. Coarse and fine adjustment. Condenser with adjuster and iris diaphragm. Plano and Concave mirror. Large polished case with lense holder. Excellent condition. —Box 3813, B.M.J.

URGENTLY wanted, *Yearbook of Urology*, 1944. —Write Necker, 27, Park Lawn Avenue, Epsom.

WANTED, SECOND-HAND SURGICAL INSTRUMENTS, furniture for surgery and consulting room, blood pressure apparatus, electric diagnostic sets, ophthalmoscopes, auriscopes, microscopes, etc. —Particulars to A Fleming & Co (Succrs.), 51, Mortimer Street, London, W 1 (Telephone Mus. 6292)

WANTED TO PURCHASE.—Cameras, enlargers and all photographic apparatus, exposure meters, tripods, etc., microscopes, binoculars cine cameras, and projectors. Prompt cash and high prices offered —Wallace Heaton, Ltd 127, New Bond Street, London, W 1

COMPRI-VENA (1937), Ltd.—The care and after-care of Varicose Veins.—In the treatment of Varicose Veins where leg support is prescribed, Compri-Vena gives meticulous attention to instructions. They will gladly supply particulars of Surgical Stockings and the service they provide.—38, South Molton Street, W.1 MAYfair 0732.

ENVELOPE RESEAL LABELS 250 3s.; 1,000 9s. 6d. Medical printing. Pre-war stationery. Samples Stamp.—Hodgson (Dept. B), Printer, Bradford.

DOCTORS' WATCHES.—Franklands can still supply Gold Watches. Write for particulars.—E. J Frankland & Co., Ltd., Marle House, South Godstone, Surrey; or London Showroom, New Bridge Street House, 30-34 New Bridge Street, Ludgate Circus, E.C.4.

Published by the Proprietors, the British Medical Association, Tavistock Square, London, W.C.1, and printed by Fisher, Knight & Co., Ltd ,

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY NOVEMBER 10 1945

STATE HOSPITALS?

The report in a Sunday paper that the State is to take over the voluntary hospitals was followed on Monday and Tuesday by varying accounts of what Mr. Aneurin Bevan's plans are. Whatever may be the truth in these reports, one thing is certain. Mr. Bevan has consulted neither the profession's own representative body, nor the voluntary hospitals, nor the local authorities. The principal organizing bodies concerned are, therefore, ignorant of the Minister's intentions. According to one paper, he has put before the Cabinet a proposal that all voluntary hospitals should come under the State, and the Cabinet has agreed in principle. Another paper suggests that the Minister will declare his plans for a National Health Service before Christmas, and that "when the B.M.A. are asked to meet the Minister the discussion will not be on the form of the health service but on the terms of the service.... The B.M.A. will be allowed to put the case as a trade union...." The same paper gives other details. The Government is apparently to nationalize all hospitals, voluntary and municipal, and will do this through 12 Regional Health Boards to cover the whole of the country. Another prophecy is that Mr. Bevan will abolish the sale and purchase of medical practices; but, we are informed through the same source, fair compensation will be paid. Still another suggestion from what appears to be a well-informed political correspondent is that the terms of service will follow the recommendations of the Spens Committee.

A commentator in the *Evening Standard* suggests that Mr. Bevan is likely to have trouble, especially with the local authorities. Mr. Somerville Hastings, M.P., Chairman of the L.C.C. and for ten years chairman of the L.C.C. Hospitals and Medical Services Committee, is reported to have said that it would be a pity if the unification of the hospitals was achieved by leaving out the local authorities.

Until the profession hears from Mr. Bevan himself what his plans are, no useful comment can be made.

HEARD AT HEADQUARTERS

Local Differentiations

From the point of view of the Local Medical War Committee the West of London was one of the most difficult districts that could be found anywhere. Hammersmith, for example, was always shorter of doctors than Kensington. There were the border cases in which the practice was partly in the committee's area and partly across the road in another borough. It was necessary on one occasion to attend before the Medical Personnel Priority Committee to explain why Kensington was a "black" area. It was easily explained. Kensington is one of those areas which attract an unusual number of doctors who are well on towards retiring age, if not beyond it, and are not, and do not want to be, in very active practice. Yet for the necessarily rough-and-ready purposes of medical man-power each of them counted as one. Statistics are quite inadequate as the tool of such bodies as war committees. The numbers as set out on paper are one thing, and translated into terms of men in practice they become quite another. It was soon brought home to these committees that allocations and determinations are not an arithmetical exercise; full account had to be taken of human factors.

The committees were constituted as democratically as possible. The members were elected annually at a meeting to which all doctors in the area were invited. Their work was marked by great fairness. Every doctor who came before them had the fullest hearing, and the decision was reached after the most careful survey of every side of the question. Dr. Pasmore declared that during the whole of his 4½ years' secretaryship he could not recall one disagreeable episode. Beyond its main task, the committee, especially in the earlier days, was constantly being called upon for the nomination of local doctors for this or that special service—for example, in connexion with the Home Guard, the Medical Boards, and the civil practitioners employed part-time by the military authorities.

Perhaps the work of the local committees is now virtually done, though there will no doubt be reluctance to let an excellent piece of organization disappear. They are being given fresh jobs; the latest is the nomination of medical members of the advisory committees and panels set up under the Disabled Persons (Employment) Act. Some may think they could perform a useful function in the resettlement of men in civil practice. But whether they come to an end or not, they can look back upon an excellent piece of work for the profession and the country.

Public Vaccinators

Some important recommendations on fees for public vaccinators will come before the next meeting of the B.M.A. Council. Following representations by the Association of Public Vaccinators, a representative of which attended at its last meeting, the Public Health Committee of the B.M.A. is asking the Council to express the view that the fees paid to public vaccinators are still wholly inadequate. A more acceptable scale has been formulated in the West Riding of Yorkshire, and has been approved by the Ministry, and in the committee's view the scale should not be less than the West Riding figures: also such fees should be payable whether the vaccination is successful or unsuccessful, and a proper mileage allowance should be paid.

A recommendation will also come before the Council that the necessary modifications be made in the Vaccination Order to allow the vaccination of children under 1 year of age to be carried out at the doctor's surgery where this is thought desirable and expedient, and that a minimum fee of five shillings should be paid for each successful vaccination so performed.

Local Authority Health Functions

Some time ago the L.C.C. put forward its view to the Government that the Council should be constituted as the statutory authority for administering the proposed comprehensive medical service within its area, with the metropolitan borough councils as the local authorities for administering certain parts of the service in their respective boroughs. Last week a report was brought before the council on the delegation of medical duties from the county to the borough councils. These delegated duties are of three kinds: maternity and child welfare, tuberculosis dispensaries, and epidemiological inquiries, this last a linkage between the laboratory service of the boroughs and the fever hospitals and laboratories of the L.C.C.

The delegation of maternity and child welfare from the county to the borough councils is to be exclusive of the institutional work now carried on by the borough councils, which will in the new circumstances be carried on by the county council. This has necessitated a definition of "institutional work"—namely, the provision, directly or indirectly, by a maternity or child welfare authority of residential accommodation for expectant or nursing mothers and their children who have not attained the age of 5 years and are not being educated in schools recognized by the Ministry of Education.

Tuberculosis dispensaries, the L.C.C. lays it down, should be situated in or near a general hospital at which a consultant service of all types and facilities for *x*-ray examinations, etc., are available, but they should retain their separate identity. One-

L.C.C. suggestion is that every three years or so the tuberculosis officer should spend a period of not more than three months on full pay undertaking a postgraduate course. This should be in the form of attendance or residence at a sanatorium, municipal or voluntary, or of an approved study tour. The L.C.C. will help with the financial arrangements, and will arrange for one of its own medical officers to replace the tuberculosis officer if desired.

MEDICAL CARE INSURANCE IN THE U.S.A.

PREPAYMENT ORGANIZATIONS

The plan of prepayment for medical services is gaining ground in the United States, although it is estimated that as yet only between four and five million persons—less than 5% of the civilian population—are covered. A list of over 200 prepayment medical care organizations has been published by the Bureau of Research and Statistics of the Social Security Board, Washington, and from this it appears that these organizations are to be found in all but twelve States of the Union, and are specially numerous in the Pacific States, where Washington has 15, Oregon 10, and California 30. New York has 24, and New Jersey only 4.

The movement began among the employees of certain hazardous industries established in areas remote from other medical facilities. Subsequently it was extended to cover groups of employees in respect of medical services for all injuries and illness regardless of origin. In a few cases the industry itself established and financed the organization, requiring no contribution from the employees, but much more frequently the employees, with or without co-operation of the employers, made their own prepayment medical-care plans. Later some groups of doctors operating private clinics began to furnish medical care on a prepayment basis, and other plans have been set up under the control of friendly societies, co-operative associations, and other groups.

The plans vary widely in their rules concerning eligibility for membership, coverage, facilities, services, and charges. Generally there are certain age and income restrictions. In some cases a physical examination is required before enrolment. Only about one-quarter of the organizations have no membership restrictions. As for the services provided, very few furnish more than the services of a doctor at his consulting room, in the patient's home, and at the hospital for medical and surgical cases (with or without maternity care), and hospitalization. Some provide the services of visiting nurses, *x*-ray and laboratory services, drugs and medicines, and dental care. Some of them limit the total money value of the services that may be received for a single illness or in a single year.

The number of doctors associated with the 214 prepayment medical care organizations included in the list published by the Bureau is 32,000, of whom 836 are employed on a full-time basis, 6,500 render part-time service, and about 25,000 have agreed to accept members of the organizations as patients under the terms of the prepayment contracts. In addition, an unknown number of doctors in 55 communities have agreed to give services to persons eligible for care under these arrangements.*

Briefly put, the purpose of these arrangements is to effect a balance between medical charges and medical services by pooling risks and costs, to minimize overhead expenses, and to assure regular incomes for practitioners. In principle, all types of arrangements are alike in providing a mechanism for continuous availability of medical personnel and facilities, and for protecting the individual or family from large medical expenditure at a time when illness cuts off the income or adds other strains to the family budget.

Distribution of Medical Costs

The desirability of the widest possible extension of the contributory insurance principle so that the population may be protected against the uneven and unpredictable costs of sickness is put forward by a group of American medical men, economists, and administrators in what is described as a new national health programme, published by the Committee on Research in Medical Economics (1790, Broadway, New York). The programme begins with the proposition that medical services should be made financially accessible to all through a system of contributory health insurance for the benefit of people without sufficient income to purchase such services for themselves. The services must be national because the American population is mobile and people in every State will expect to have equal eligibility. Moreover, experience has shown that standards of medical and hospital care established nationally by Government and voluntary agencies are effective in raising the level of facilities and services in many localities. It is also most desirable to have national standards for the certification of specialists, acceptability for hospitals, amounts and methods of payment to hospitals and to doctors, conditions of service, and adjustment of complaints.

It is calculated that at least nine-tenths of the population need protection against sickness costs. Limitation of coverage to certain income groups or occupations is not considered desirable. A national health programme must include all, or almost all, the population. Costs of sickness, unlike most other costs, cannot be regularized in the family budget and illness may bring financial distress, sometimes economic disaster, to all income groups except the well-to-do. The view of these writers is that a national system of medical care can best be based on contributory insurance, though some of them urge that taxation affords a more flexible and theoretically a more desirable method. An income tax reserved for medical purposes is suggested.

The insurance system favoured in this programme is one under which payments will be made by employers, employees, and self-employed persons, the payments being related to the earnings of the contributors. In addition, funds should be afforded from the national exchequer, especially for new and improved hospitals in rural areas.

A principle strongly laid down is freedom of service, the doctor to have the right to act through self-chosen organizations as well as individually, and to have the opportunity for experimentation with new applications of science and new forms of practice. He should have the right to accept or reject patients, to take part or not to take part in a publicly provided system, and to enter group practice or maintain separate practice as he wills.

Group practice is favoured in this memorandum. It is pointed out that there is already group practice in hospitals, though there it is confined principally to non-paying patients. At present, apart from hospitals and clinics, medical care is mostly furnished by doctors who practise as individuals with limited equipment and facilities. The advance of medicine makes it no longer possible for one physician to master more than a fraction of medical science or professional skills.

> "Numerous studies have shown that through well-organized group practice under a prepayment plan about twice as much physician and auxiliary service may be furnished for the same total expenditures as the people are accustomed to spend for comparable services supplied in the same community through individual practice paid for on a fee-for-service basis."

It is suggested that in each local area the general practitioners carrying on individual practice should determine by a majority vote the method of payment which they would prefer, but those who desire group instead of individual practice in the same area, and to be remunerated according to group standards, should be protected.

> "When the war is over some 60,000 or more physicians will be demobilized, about 20,000 of whom will be young men who have never been in practice."

It is considered important to attract these young men into rural areas where there are special needs, and to this end good local diagnostic and hospital facilities must be established in such areas, together with rural health centres. Something might also be done by means of medical education, including the opportunity for institutional postgraduate study for rural doctors, to encourage rural practice.

One other principle laid down in this programme is that administrative responsibility should be "divided functionally on the operating level between the professional and financial fields." The administrative officials of the service should be appointed by and be responsible to a public body or official, and should be removed as far as possible from partisan political pressures. The administrators of all the professional and technical aspects of the programme should be qualified persons. Advisory councils composed of well-informed persons from professional and lay groups are also needed on the local as well as on the national and regional levels.

---

* These figures are for 1943.

Thus the position appears to be that at present there are in the United States a very large number of independent organizations for health insurance and prepayment for medical care, but there is a very important movement towards a national system of contributory insurance.

Correspondence

Simple Arithmetic

SIR,—In the *Journal* for June 16 (p. 860) the respective medical strengths of the Navy, Army, and Air Force were given as 2,405, 12,200, and 2,564—a total of 17,169. We are now told that by June, 1946, the Army will be cut to the former strength of the R.A.F. Thus if it maintains the extravagant establishments of the wartime R.A.F., the R.A.M.C. can release approximately 10,000 officers in the period under review. Proportional to the reductions in total man-power R.A.F. and Naval establishments should be 1,343 and 1,243 medical officers respectively—a total of 2,586.

During the last 3 to 4 years the intake of Navy and R.A.F. medical officers has been negligible; thus, of the total condemned to remain, with few exceptions, all will have served longer than that period. Of the thousands who (as explained above) should leave the R.A.M.C. many must have qualified after their unfortunate colleagues were commissioned. Approximately 2,000 new doctors will have graduated this summer and should soon be available for call-up. Is it too much to hope that these will be distributed between the Navy and R.A.F.? Considering that some may elect to continue in the Services, by so doing all medical personnel who served in the dark days up to Alamein could be released by next summer.

Medical officers need no preliminary training, and apart from its financial inequalities rank really is meaningless. Accordingly, the argument of inability to free "trained personnel" (*vide* retention of "key" officers in the B.A.O.R.) cannot be applied to medical officers. The numbers exist; it only remains for the necessary authority to utilize them justly.—I am, etc.,

"Q. E. D."

Labour Party's Health Policy

SIR,—In the *Supplement* of Oct. 13 (p. 84) the officers of the Socialist Medical Association appeal for co-operation in establishing the new health service, and suggest that there is misunderstanding on the part of many doctors as to the policy of the Socialist Party. Any misunderstanding is not all on one side. Dr. Stark Murray, one of the signatories of the letter in your columns, addressing a Labour Party meeting, made some extravagant criticisms of the Representatives at the Representative Meeting—his colleagues—charging one section with attempting to "make the world safe for hypocrisy" (*Supplement*, Jan. 6, p. 3). I could quote other equally unjust statements if space allowed, but such methods of controversy, though perhaps good platform business at meetings of laymen, will not advance any efforts for co-operation.

Your correspondents point out that the Labour Party in its pamphlet *National Service for Health* states: "Patients should be able to change their doctors if dissatisfied, and have a choice of an alternative." That is reassuring, but "free choice of doctor" has been derided in Parliament, in the press, and at Socialistic meetings; and it is doubtful whether the principle would be accepted by the present House of Commons.—I am, etc.,

Sheffield. HENRY BROWN.

The Young Specialist

SIR,—I suppose I am one of the young "indispensable" civilian specialists mentioned by "Quondam Volunteer" (*Supplement*, Oct. 20, p. 92) and others who suspect our "indispensability" and perhaps suggest that we have deliberately avoided service in the Forces. There are probably many such as myself who have been employed by municipal authorities since before the war and who have repeatedly asked their employing councils to release them to volunteer, but have repeatedly been refused such permission on the grounds that they were essential in the service—grounds which, looked at from the employer's point of view, were mostly eminently reasonable.

It is obvious that no person is essential if there is another man of similar experience to replace him; and as I have not been replaced I presume that either no such person is available or, if there is, he is unwilling to undertake the work I do for the salary I work for. The second possibility seems the more likely one. It is hardly to be expected that lieutenant-colonels or even majors will be anxious to undertake such work when it means a very considerable reduction in their earnings. There is no point in volunteering now, even if permission were forthcoming, but I, for one, have no objection whatever to taking my turn in the Forces if I am so directed. I can assure "Quondam Volunteer" that so far as I know there are few civilian municipal specialists who have avoided being called up, and many who have continued in their civilian work throughout the war with regret that they were not allowed to serve in the Forces.

As my point of view has been clear to my employers and to the C.M.W.C. for years I have no reason to remain anonymous.—I am, etc.,

London, S.E.22. J. L. STEPHEN.

Short-service Commissions and Release

SIR,—Permit me to reply to the comments of "Emergency Commission" (*Supplement*, Oct. 20, p. 92), in which he appears to claim the dual personality of having an emergency commission and being "a regular." When we accepted short-service commissions it was in peacetime and before the era of medical conscription. The age-and-service scheme depends on age and *war* service—not merely service. It is true that under the Royal Warrant we are liable to a reserve liability of 12 years (after the expiry of 5 years' service) in an emergency. However, these regulations were framed in the pre-conscription era and clearly not meant to deal with a world war. Now that wholesale release is being carried out by age and service, and reserves of other arms are being released accordingly, it is submitted that to make an exception in the case of short-service R.A.M.C. officers is grossly unfair. Furthermore, the injustice has only recently been decided upon. Early in the year I was given official intimation of my release group by the War Office. A few months ago I was asked if I wished to apply for a deferment. Before I'd had time barely to answer, a new instruction came down that short-service officers were not eligible for release.—I am, etc.,

"ANOTHER MEDICO, R.A.M.C."

One Service: One Release Scheme

SIR,—All political parties in the Government have agreed upon a health service for the nation. This service will be a single entity which would serve the Government by its attention to patients in all walks of life.

Now, there never was a reason why the three Services should have their own medical services. Practically all the senior M.O.s of the R.A.F. were trained in the Army. The unfairness of the method of demobilization on the individual M.O. owing to the group demobilization times of the different Services has been stressed time and again by Service doctors in the hope that the aged and infirm C.M.W.C. might show some sign of life and might do something. Let me at this stage tell them that this approach is as useless as the hope that the Insurance Acts Committee will get the capitation rate raised to the amount it was before the last war—before they were born.

Now, if some active body would point out to the Government that doctors are doctors whether they are dressed in navy or khaki or light blue, we might find that they would feel that the various jobs in the Services are not as diverse as the various jobs in civil life for which they are intending to combine all doctors under one authority. It would be far from impossible to organize one medical service for all the Forces, and then all demobilization groups for doctors would be the same in all the Services. At the same time we could expect some economy, so that the 500 fit men per doctor quoted by Dr. Conybeare (*Supplement*, Oct. 20, p. 91) might be raised to 1,500 and so reach half the numbers that the elderly doctors have had to serve of the less fit and more-widely-spread-about proportion of the people for the past six years.—I am, etc.,

Reading. S. C. ALCOCK.

BRITISH MEDICAL ASSOCIATION

INSURANCE ACTS COMMITTEE

Election of Direct Representatives for 1945–6

The following have been elected as direct representatives of Local Medical and Panel Committees on the Insurance Acts Committee for 1945–6.

Group A 1.—Dr. N. Stewart (Edinburgh)
„ A 2.—Dr. W. J. Leach (Inverness-shire)
„ A 3.—Dr. W. M. Knox (Glasgow)
„ A 4.—Dr. W. Jope (Blantyre, Lanarks)
„ B.—Dr. P. V. Anderson (Shildon, Co. Durham)
„ C.—Dr. H. F. Hollis (Leeds)
Dr. W. H. Smailes (Huddersfield)
„ D.—Dr. C. Baxter (Liverpool)
Dr. A. Campbell (Accrington, Lancs)
Dr. S. A. Winstanley (Urmston, Lancs)
„ E.—Dr. D. B. Evans (Coedpoeth, Wrexham)
Dr. W. V. Howells (Swansea)
„ F.—Dr. J. B. Bennett (Hyde, Cheshire)
„ G.—Dr. J. Hallam (Stoke-on-Trent)
„ H.—Dr. E. Lewis Lilley (Leicester)
„ I.—Dr. C. H. Gregory (Rugby)
„ J.—Dr. D. J. B. Wilson (High Wycombe, Bucks)
„ K.—Dr. J. C. Pearce (Diss, Norfolk)
„ L.—Dr. C. F. R. Killick (Williton, Somerset)
„ M.—Dr. H. S. Howie Wood (Isle of Wight)
„ N.—Dr. S. A. Forbes (Croydon)
Dr. A. T. Rogers (Bromley, Kent)
„ O.—Dr. J. L. McKenzie Brown (London)
Dr. C. F. T. Scott (London)
„ P.—Dr. E. A. Gregg (London)
Dr. H. H. D. Sutherland (London)
„ Q.—Dr. S. E. A. Achesen (Belfast).

Scottish Subcommittee

The following have been elected as direct representatives of Scottish Panel Committees on the Insurance Acts Scottish Subcommittee for 1945–6:

Group A.—Dr. I. M. MacLeod (Inverness)
„ B.—Dr. R. Bruce, C.B., D.S.O. (Cults, Aberdeenshire)
„ C.—Dr. M. J. Murray (Dundee)
„ D.—Dr. J. T. Simpson (Perth)
„ E.—Dr. F. McEwen Sinclair (Glencraig, Fife)
„ F.—Dr. A. F. Wilkie Millar (Edinburgh)
„ G.—Vacancy
„ H.—Dr. A. Simpson (Hawick)
„ I.—Dr. I. D. Grant (Glasgow, S.1)
Dr. J. R. Langmuir (Glasgow, W.2)
„ J.—Dr. G. MacFeat (Douglas, Lanarks)
„ K.—Dr. A. Climie (Barrhead, Renfrewshire)
„ L.—Dr. R. C. Hamilton (Hurlford, Ayrshire)
„ M.—Vacancy
„ N.—Dr. G. McC. Ferguson (Falkirk)

The vacancies in Groups G and M will be filled by the Insurance Acts Committee.

C. HILL,
Secretary.

B.M.A.: Branch and Division Meetings to be Held

SUNDERLAND DIVISION.—At Sunderland Royal Infirmary, Thursday, Nov. 22, 3.30 p.m., Right Hon. Lord Horder: Medicine a Social Science; 7.30 p.m., Annual Dinner.

R—Male, W—Women practitioners, liable to military service under the National Service Acts.

B1—Whole-time appointments, usually resident within the senior establishment—e.g., Registrar, R.S.O., etc.

A—Whole-time resident house appointments open to practitioners without previous experience.

B2—Whole-time house appointments not within the senior establishment, usually resident, and usually held by practitioners with six months' experience.

APPOINTMENTS

INDIAN MEDICAL SERVICE. Recruitment of WOMEN MEDICAL OFFICERS.—The Government of India are prepared to recruit a limited number of woman medical officers for service with the Indian Medical Service for the duration of the war. Applicants must be British subjects, of not more than 45 years of age, and those selected will be appointed in the rank of Lieutenants. Antedate of seniority may be granted up to a minimum period of 6½ years in respect of resident hospital appointments, higher qualifications, and/or professional experience. The antedate will count for pay and promotion, but, in the case of candidates recruited in this country, higher rank will not be assumed until the date of disembarkation in India. On termination of service, a minimum gratuity is guaranteed to those officers who complete one year of service, viz., Rs. 2,000 to officers whose registrable medical qualification is dated before January 1, 1940, and Rs. 1,000 to those who qualified after that date, plus one month's pay for each further completed year of Army Service. Further particulars regarding rates of pay, etc., may be obtained from the Medical Adviser, India Office, London, S.W.1, or from the Secretary, Military Department, India Office, to whom all inquiries should be addressed.

CITY OF BIRMINGHAM MENTAL HOSPITALS. Winson Green Division.—Applications are invited for the post of DEPUTY MEDICAL SUPERINTENDENT at a commencing salary of £625 per annum, plus residential emoluments consisting of unfurnished flat, fuel, light, central heating and laundry, valued for superannuation purposes at £120 per annum. In addition, there is a war bonus of £47 0s. 5d. per annum. Applicants must have had several years' mental hospital experience and must possess a Diploma in Psychological Medicine. Practical experience in Psychotherapy will be a recommendation. The candidate appointed will be required to pass a medical examination and to contribute under the Asylums Officers' Superannuation Act, 1909. He must devote the whole of his time to the duties of the office and will not be allowed to engage in any other work. The appointment is subject to one month's notice on either side, and the successful candidate will be required to serve in such Institutions belonging to the Mental Hospitals Committee as they may from time to time direct. Applications, including those from medical practitioners serving in His Majesty's Forces, must be addressed to the Medical Superintendent, Winson Green Mental Hospital, Birmingham, 18, so as to be received not later than March 1, 1946. The appointment will not be made before April 1, 1946.

CITY OF STOKE-ON-TRENT. City General Hospital. ASSISTANT RESIDENT MEDICAL OFFICERS.—Applications are invited from registered medical practitioners (single—male or female) including R and W practitioners who now hold A posts, for two appointments of Assistant Resident Medical Officer (B2), at the City General Hospital, Stoke-on-Trent. If offered to R practitioners, the appointments will be limited to a period of six months, otherwise they will be for a period of one year. The salary is at the rate of £250 per annum, plus bonus with full residential emoluments. The hospital, which is an emergency hospital, has approximately 1,200 beds and there is excellent scope for medical, surgical and obstetrical work. Applications, endorsed "Medical Officer—City General Hospital," should be sent to the undersigned immediately.—Harry Taylor, Town Clerk.

CITY OF CARLISLE. City General and Fusehill Emergency Hospitals, Carlisle (100 civilian beds and 180 E.M.S.).—Applications are invited for the following appointment:—JUNIOR RESIDENT MEDICAL OFFICER (A) to assist in care of civilian beds and for orthopaedic and general surgical duties in the adjacent E.M.S. Fracture "A" Hospital. Practitioners within three months of qualification who are liable for service under National Service Acts may apply. Appointment will be for a period of six months from November 1, 1945. Salary £200 per annum, with full residential emoluments. Applications should be sent to the Acting Medical Officer of Health, 22, Fisher Street, Carlisle, as early as possible.

COUNTY BOROUGH OF SOUTHAMPTON. Borough Isolation Hospital, Millbrook, Southampton. JUNIOR RESIDENT MEDICAL OFFICER (Locum Tenens) (A).—Applications are invited from medical practitioners, female, for appointment as Locum Tenens Junior Resident Medical Officer (A). Salary is at the rate of £7 7s. per week, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months. Applications should be addressed immediately to the undersigned.—H. C. Maurice Williams, Medical Officer of Health, Civic Centre, Southampton.

CITY OF MANCHESTER. Withington Hospital (1,150 beds). TEMPORARY RESIDENT SURGICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male or female, for the appointment of Temporary Resident Surgical Officer (B1), which will become vacant towards the end of 1945 at the above-mentioned hospital when the present officer is expected to be recruited into H.M. Forces. Candidates should hold a higher qualification in surgery and have had previous experience in resident hospital posts. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. Basic salary £475 per annum, but further increments of £25 to a maximum of £550 may be granted at the discretion of the Council. Full residential emoluments valued at £150 are additional to the salary stated. A temporary cost-of-living wages addition amounting, at present, to £60 per annum in the case of a male officer and £48 5s. per annum in the case of a female officer is also payable in addition to the salary stated but will be apportioned as between cash salary and emoluments. The appointment is subject to the Manchester Corporation conditions of service. Full information and forms of application may be obtained from the Medical Officer of Health, Hospitals Administration Section, G.P.O. 399, Town Hall, Manchester, 2. Applications for the post must be forwarded to me only, and not to members of the Committee or the Council, not later than November 28, 1945. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF MANCHESTER. Crumpsall Hospital (1,400 beds). RESIDENT ASSISTANT MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the above-mentioned appointment, which will become vacant on November 20, 1945, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, the appointment will be for a period of six months, otherwise it will be for a period of twelve months. The duties of the post are mainly medical. The basic salary for the appointment is £200 per annum, with board residence and laundry in addition, subject to the Manchester Corporation conditions of service. A temporary cost-of-living wages addition is payable in addition to the salary stated. Applications are to be addressed to the Medical Superintendent, Crumpsall Hospital, Crumpsall, Manchester, 8, at once. Canvassing in any form, oral or written, direct or indirect, is prohibited.—Philip B. Dingle, Town Clerk, Town Hall, Manchester, 2.

CITY OF PLYMOUTH. City Isolation Hospital. RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners (male) for the above appointment, which is terminable by one month's notice on either side at any time. Suitably qualified R practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. The successful candidate will be required to work under the direction of the Medical Superintendent, and the duties are chiefly concerned with infectious and venereal diseases. He should be able to drive a car which is provided by the Council. Salary is at the rate of £300 per annum, plus war bonus and full residential emoluments. Applications should be sent to the undersigned as soon as possible. T. Peirson, Medical Officer of Health, Seven Trees, Lipson Road, Plymouth.

CITY OF NORWICH. Woodlands Hospital (311 beds). ASSISTANT RESIDENT MEDICAL OFFICER (B2).—Applications are invited from registered medical practitioners for the appointment of Assistant Resident Medical Officer (B2), including R and W practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months, otherwise it will be for a period of one year. The salary is at the rate of £250 per annum, with full residential emoluments. Further particulars of appointment to be obtained from the Senior Medical Officer, Woodlands Hospital, Bowthorpe Road, Norwich, and to whom applications should be sent.—Bernard D Storey, Town Clerk, City Hall, Norwich.

CITY OF BIRMINGHAM. Little Bromwich Infectious Diseases Hospital (750 beds). JUNIOR MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for appointment as Junior Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. The appointment is for a period of six months. The salary will be at the rate of £300 per annum, plus residential emoluments. Applications should be addressed to Medical Officer of Health, Public Health Department, Birmingham, 3, to reach him not later than November 20, 1945

CITY OF LIVERPOOL. Fazakerley Isolation Hospitals, Longmoor Lane, Liverpool, 9. MEDICAL SUPERINTENDENT.—Applications are invited from fully qualified medical practitioners with the necessary knowledge and experience of hospital administration for the permanent appointment of full-time resident Medical Superintendent at the above hospital. Candidates must have an extensive knowledge of, and experience in, the treatment of fevers and infectious diseases. Applications from Service candidates are invited. The salary is at the rate of £1,000 per annum, together with cost-of-living bonus at present amounting to approximately £30 per annum, and residential emoluments, namely, house, fuel and light, valued at £150 per annum for the purpose of superannuation. All fees received in connection with the above position by the officer appointed are to be handed over to the City Council. The medical officer appointed will assume control of the hospital under the direction of the medical officer of health, and be responsible for the work of the medical, nursing, and administrative staffs in accordance with the instructions of the Council from time to time. The hospital accommodates all types of infectious diseases, has approximately 400 beds, with a staff of resident assistant medical officers and visiting specialists and a nursing staff of 120. The hospital is a training school for fever nursing recognized by the General Nursing Council and the medical superintendent, with the matron, will be required to organize the necessary lectures in connexion with the training of nurses. The appointment will be made subject to the provisions of the Local Government Superannuation Acts and the Standing Orders of the City Council, and will be determinable by three calendar months' notice on either side. Canvassing members of the City Council, either directly or indirectly, will be deemed a disqualification. Applications, stating whether R or W practitioner, should be endorsed "Medical Superintendent" and sent to the undersigned not later than Monday, March 11, 1946. The consent of the Minister of Health has been obtained to advertise for and make this appointment.—W. H. Baines, Town Clerk, Municipal Buildings, Dale Street, Liverpool, 2.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. MEDICAL OFFICER OF HEALTH.—Applications are invited from registered medical practitioners, including those now serving in H M Forces, qualified as prescribed by the Local Government Act, 1933, for the permanent appointment of Medical Officer of Health at a salary of £1,700 per annum plus cost-of-living bonus, at present £33 16s per annum. The appointment is subject to the Local Government Superannuation Act, 1937, and the successful candidate will be required to pass a medical examination. Further particulars as to the duties of Medical Officer of Health and conditions of appointment may be obtained on application to the undersigned. Applications endorsed "Medical Officer of Health" should be accompanied by copies of three recent testimonials and the names of three persons to whom reference can be made and must be addressed to the undersigned to reach him not later than March 9, 1946. The consent of the Ministry of Health has been obtained to the making of this appointment.—John Atkinson, Town Clerk, Town Hall, Newcastle-upon-Tyne.

CITY AND COUNTY OF NEWCASTLE-UPON-TYNE. Newcastle General Hospital. RESIDENT ANAESTHETIST (B1).—Applications are invited from registered medical practitioners, male and female, for the post of Resident Anaesthetist (B1), which is now vacant. Applicants must have had previous experience, and will be required to carry out the major portion of the emergency anaesthetist work. R and W practitioners holding B2 posts may apply. Applications from R practitioners now holding B1 posts cannot be considered unless they have been rejected by the R.A.M.C. The appointment is tenable for a period of twelve months, and the salary is at the rate of £350 per annum, plus cost-of-living bonus and the usual residential emoluments. Applications should be forwarded immediately to the Medical Officer of Health, Town Hall, Newcastle-upon-Tyne, 1.

COUNTY BOROUGH OF BOURNEMOUTH.—The Town Council, with the consent of the Ministry of Health, invite applications from medical practitioners, including those serving in H M. Forces, holding the D.P.H. for the permanent appointment of DEPUTY MEDICAL OFFICER OF HEALTH AND DEPUTY SCHOOL MEDICAL OFFICER. Salary £800 increasing by annual increments of £50 to £1,000 per annum and cost-of-living bonus with a car allowance of £75 per annum. Applications will be considered from practitioners already receiving a salary in excess of this salary, and if any such practitioner is appointed he will be paid a salary equal to his present salary." Closing date for applications March 29, 1946. For further particulars apply to A. Lindsay Clegg, Town Clerk, Bournemouth

IMPORTANT—All applicants should read the notice at the top of page 9 about qualifications required.

COUNTY BOROUGH OF CROYDON. Mayday Hospital.—Applications are invited from registered medical practitioners (either sex) who have had practical hospital experience for the following appointments, namely:

RESIDENT ASSISTANT MEDICAL OFFICER (B1) (Temporary). Salary £350 by £25 to £450 per annum, with board residence and laundry, valued at £140 per annum, and cost-of-living bonus of £29 18s. per annum (males), £24 1s. (females). Preference will be given to those holding a higher medical qualification. Suitably qualified R and W practitioners holding B2 posts are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C.

RESIDENT JUNIOR ASSISTANT MEDICAL OFFICER (B2). Salary, £250 with board residence and laundry, valued at £140 per annum, and cost-of-living bonus of £29 18s. (males), £24 1s. (females). Suitably qualified R and W practitioners holding A posts may apply, and in the case of R practitioners the appointment will be limited to six months otherwise it will be for a period of twelve months.

Application forms may be obtained from the Medical Officer of Health, 20, Katharine Street, Croydon, on receipt of a stamped addressed foolscap envelope, and should be returned to him not later than 11 a.m. on Monday, November 19, 1945, together with copies of three recent testimonials. Canvassing will disqualify.—E. Taberner, Town Clerk, Town Hall, Croydon.

COUNTY OF LINCOLN—PARTS OF LINDSEY. Public Health Department. TEMPORARY ASSISTANT MEDICAL OFFICER OF HEALTH for Maternity and Child Welfare (Female).—Applications are invited from fully qualified medical women for the post of Assistant Medical Officer for maternity and child welfare. Before applying, intending applicants already in whole-time employment with local authorities must obtain the permission of their (principal) regional medical officer. Salary will be £650, rising my two annual increments of £25 to £700 per annum, plus war bonus. The appointment will be terminable upon one month's notice from either side. The person appointed will be required to provide her own car for which a travelling allowance will be paid in accordance with the County Council's scale. Further particulars of the appointment and forms of application may be obtained from the undersigned, to whom applications should be forwarded as soon as possible.—W. S. H. Campbell, County Medical Officer of Health, County Offices, Lincoln.

COUNTY COUNCIL OF THE COUNTY OF STIRLING.—Applications are invited for the appointment of an ASSISTANT MEDICAL OFFICER OF HEALTH. Applicants must be registered medical practitioners and also hold a Diploma in Public Health. Considerable experience in tuberculosis and sanatorium work essential. Salary £500 per annum rising by annual increases of £25 to a maximum of £700 per annum, with place on the scale according to experience and qualifications. A temporary cost-of-living bonus, at present 23/- per week, and a car allowance will be granted. The successful applicant will require to pass a medical examination. The appointment is a temporary one meantime, but the successful applicant will be eligible to apply for a permanent post at a later date. Applicants must obtain permission from the Secretary of State for Scotland to apply for the appointment. A form of application may be obtained from the undersigned, with whom applications should be lodged immediately.—George J. Sherriff, County Clerk, County Offices, Viewforth, Stirling.

COUNTY BOROUGH OF ROCHDALE.—Applications are invited for the post of TEMPORARY WHOLE-TIME ASSISTANT MEDICAL OFFICER OF HEALTH from registered medical practitioners not already in whole-time Public Health employment. The duties are mainly in connexion with the Child Welfare Section, and will include work in the School Medical Service and Female Venereal Diseases Clinics The salary will be on the scale £500, rising by £25 to £700 (commencing according to experience) plus bonus at present £110 per annum. Applicants, male or female, should have experience in the branches mentioned, and preference will be given to holders of the Diploma in Public Health or similar qualification. Forms of application may be obtained from the Medical Officer of Health, Public Health Offices, Rochdale, and must be returned to him, accompanied by copies of any recent testimonials, and endorsed Temporary Assistant Medical Officer, as early as possible.

QUEEN ELIZABETH HOSPITAL FOR CHILDREN, Hackney Road, E.2. RESIDENT MEDICAL OFFICER (B1).—Applications are invited from registered medical practitioners, male and female, for the above appointment, to become vacant January 1, 1946, including R practitioners now holding B2 posts. Applications from R practitioners holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Candidates must have had experience in the treatment of sick children. The appointment will be for six months in the first instance and is renewable for subsequent periods not exceeding two years. Salary £300 per annum, with full residential emoluments. Application forms may be obtained from the undersigned and should be returned not later than December 1, 1945.—Charles H. Bessell, General Secretary

---

COUNTY BOROUGH OF SOUTHEND-ON-SEA. Southend Municipal Hospital, Rochford, Essex. RESIDENT HOUSE MEDICAL OFFICER (A).—Applications are invited from registered medical practitioners, male or female, for the appointment of Resident House Medical Officer (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be tenable for a period of six months, otherwise for a period of one year. Salary is at the rate of £200 per annum, with full residential emoluments, valued at £100 per annum, plus cost of living bonus. The person appointed will be liable to pay superannuation contributions if the provisions of the Local Government Officers' Superannuation Acts are applicable. The post is now vacant and applications should be addressed immediately to the Medical Superintendent, Southend Municipal Hospital, Rochford, Essex.—Archibald Glen, Town Clerk, Town Clerk's Office, Southend-on-Sea.

If held by a practitioner who is liable under these Acts appointment will be for a period of six months Salary £175 per annum, with full residential emoluments. Applications to be forwarded to the undersigned.—Joseph Griffith, Superintendent-Secretary.

BOLINGBROKE HOSPITAL, Wandsworth Common, S.W.11.—The Board of Governors invite applications for the following appointments:

(a) TWO HONORARY PHYSICIANS.
(b) HONORARY SURGEON.
(c) FOUR ANAESTHETISTS.

Candidates for appointments (a) must be Fellows or Members of the Royal College of Physicians, and for appointment (b) Fellows of a Royal College of Surgeons. All must be engaged solely in consulting practice. The appointments (c) are for a period not exceeding 3 years, and carry honoraria of 50 guineas per annum. Service candidates are eligible to apply for these appointments, which will be made towards the middle of March, 1946. Applications with copies of testimonials to be sent by March 10, 1946, to W. S. Randolph Biss, Secretary-Superintendent.

BIRMINGHAM ACCIDENT HOSPITAL AND REHABILITATION CENTRE. HOUSE SURGEON (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Surgeon (B2), to become vacant immediately, including R practitioners who now hold A posts. The appointment will be for six months. The salary is at the rate of £200 per annum, with full residential emoluments.—A. A. MacIver, Secretary, Bath Row, Birmingham, 15.

BRADFORD ROYAL INFIRMARY.—Applications are invited from registered medical practitioners (male, single) for the post of HOUSE SURGEON (A), vacant January 1, 1946. Six months appointment. Practitioners within three months of qualification and liable under the National Service Acts may also apply. Salary £150 per annum, with full residential emoluments. There are 372 beds and 8 resident officers. Applications should be sent immediately to H. Trusson, House Governor and Secretary.

BROMLEY AND DISTRICT HOSPITAL, Bromley, Kent (200 beds).—Applications are invited from registered practitioners for the appointment of HOUSE SURGEON (A), now vacant. Practitioners within three months of qualification, and listed under the National Service Act may apply, and the appointment will be for a period of six months. The salary is at the rate of £150 per annum, with full residential emoluments. Application to be submitted to the undersigned.—E. H. Hurst, House Governor.

CHESHIRE COUNTY MENTAL HOSPITAL, Parkside, Macclesfield.—Male or female TEMPORARY ASSISTANT MEDICAL OFFICER (B1) required, not eligible for the Services. Salary £10 10s. per week, with board, apartments, and laundry. Applications to be sent to the Medical Superintendent.

CAMBORNE-REDRUTH MINERS' AND GENERAL HOSPITAL, Redruth, Cornwall.—Applications are invited for the post of RESIDENT OBSTETRIC OFFICER (B1) for the maternity unit maintained by the Cornwall County Council in connexion with the Camborne-Redruth Miners' and General Hospital. Salary is at the rate of £300 a year, with the usual emoluments. The appointment will be subject to termination by one month's notice in writing, but will ordinarily be for a period of twelve months. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Applications to be addressed to J. C. Field, Secretary-Superintendent.

CARDIFF ROYAL INFIRMARY, Cardiff. HOUSE PHYSICIAN and HOUSE SURGEONS (A).—Applications are invited from registered medical practitioners, male and female, for the appointments as follows: (1) One House Physician; (2) Two House Surgeons, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £75 per annum, with full residential emoluments. The three posts are now vacant. Applications should reach the undersigned at the earlies possible moment.—R. Armstrong, Medical Superintendent.

CLAYTON HOSPITAL, Wakefield.—Applications are invited immediately from registered medical practitioners for the following appointment: RESIDENT ORTHOPAEDIC OFFICER (B2) with casualty duties, male, salary £250 per annum, with full residential emoluments. R practitioners who now hold A posts may apply, when appointment will be limited to six months; otherwise it may be extended for a further period. Applications should be sent to the undersigned as soon as possible.—W. Read, Superintendent and Secretary.

CARDIFF ROYAL INFIRMARY, Cardiff. CASUALTY SURGICAL OFFICER (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of Casualty Surgical Officer (B2), to become vacant on December 1, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months. The salary is at the rate of £150 per annum, with full residential emoluments. Applications should reach the undersigned as early as possible.—R. Armstrong, Medical Superintendent.

CAMBORNE-REDRUTH MINERS' AND GENERAL HOSPITAL. Redruth.—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A), vacant immediately. Salary at the rate of £200 per annum, with the usual residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months. Applications to be addressed to J. C. Field, Secretary-Superintendent, Redruth.

CAMERON HOSPITAL, West Hartlepool (86 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), duties to commence as soon as possible. Salary at the rate of £200 per annum, with full residential emoluments. Salary is at the rate of £120 per annum, with full residential emoluments. Practitioners within three months of qualification and liable under the National Service Acts may apply, when the appointment will be for a period of six months. Applications to be forwarded immediately to the Secretary.

MANSFIELD AND DISTRICT GENERAL HOSPITAL (227 beds).—Applications are invited for the temporary post of VISITING EAR, NOSE AND THROAT SURGEON. Applicants must be F.R.C.S., and preferably possess the D.L.C., and must be of full consultant status. Salary is in accordance with the B.M.A sessional basis scale. Not less than two sessions per week required. The post is open to persons at present serving with H.M. Forces. Conditions and terms of appointment may be obtained on request from the undermentioned. Applications must be received not later than November 24, 1945.—K. L. Ward, Secretary.

NOTTINGHAM GENERAL HOSPITAL. HONORARY RADIOLOGIST.—The Board invites applications for the above position which has arisen owing to the death of the senior honorary radiologist. Candidates must be fully qualified and registered medical practitioners. The successful candidate must confine his private practice entirely to X-ray and allied work, and shall attend the hospital daily. He will be appointed for a term of five years and then be eligible for re-election. Service candidates are eligible to apply for the appointment, which will be made during the month of February, 1946. The present assistant honorary radiologist is an applicant, and if he is appointed to the post there will be a vacancy for an Assistant Honorary Radiologist. The conditions of the appointment of Assistant Honorary Radiologist are the same as for the Honorary Radiologist. Applications must reach the undersigned by the first post of February 23, 1946. —Henry M. Stanley, House Governor and Secretary.

NORFOLK AND NORWICH HOSPITAL, Norwich.—Applications are invited for the following appointments:—RESIDENT REGISTRAR (B1) to the Orthopaedic Department. Salary (not less than £300 per annum) according to experience. Suitably qualified R and W practitioners holding B2 posts, also those holding B1 and rejected by the R.A.M.C. may apply.

CASUALTY OFFICER (B2). R practitioners who now hold A posts are invited to apply. If held by an R practitioner the appointment will be for a period of six months. Salary £170 per annum with full residential emoluments. Applications to be addressed to Frank Inch, House Governor and Secretary.

NOBLE'S ISLE OF MAN HOSPITAL, Douglas, Isle of Man (137 beds).—Applications are invited from registered medical practitioners for appointment of SECOND HOUSE SURGEON (A), including practitioners within three months of qualification who are liable to service under the National Service Acts. If the person appointed is liable under these Acts the appointment will be for a period of six months, otherwise it will be for a period of twelve months. Salary at the rate of £250 per annum, with full residential emoluments in addition. Copies of two recent testimonials required.—E. K. Kelly, Secretary, Douglas.

NORFOLK AND NORWICH HOSPITAL, Norwich.—The Board of Management hereby gives notice that the following vacancies on the honorary medical staff will be filled at the end of April, 1946:

HONORARY ASSISTANT PHYSICIAN.

TWO HONORARY ASSISTANT SURGEONS.

HONORARY ASSISTANT GYNAECOLOGICAL AND OBSTETRICAL SURGEON.

HONORARY OPHTHALMIC SURGEON.

Candidates for the office of Assistant Physician shall produce evidence of being Doctors in Medicine of one of the Universities of the British Empire, or members of the Royal College of Physicians of London, and of being registered according to the provisions of the Medical Act.

Candidates for the offices of Assistant Surgeon or Assistant Gynaecological and Obstetric Surgeon shall produce evidence of being Masters or Bachelors of Surgery of one of the Universities of the British Empire or of being Fellows of one of the Royal Colleges of Surgeons of the British Empire, and of being registered according to the provisions of the Medical Act.

Candidates for the office of Ophthalmic Surgeon shall produce evidence of being Masters or Bachelors of Surgery of one of the Universities of the British Empire or of being Fellows of one of the Royal Colleges of Surgeons of the British Empire, or of holding a special Diploma in Ophthalmology granted by a University or a Royal College of Surgeons of the British Empire and of being registered according to the provisions of the Medical Act. The present Honorary Assistant Ophthalmic Surgeon is an applicant for this post.

To enable candidates in H.M. Forces to be considered, the latest date for the receipt of applications is March 1, 1946. Candidates on service abroad can send names of three persons to whom application may be made for testimonials. The above appointments are being notified to the Medical Directors-General at the Admiralty, War Office, and Air Ministry. Applications, with copies of testimonials or names of referees, must be sent to the undersigned from whom further particulars regarding the posts may be obtained.—Frank Inch, House Governor and Secretary.

NOTTINGHAM HOSPITAL FOR WOMEN (110 beds, including private wards, annexe for 28 patients on outskirts of town).—Applications are invited from registered medical practitioners for the appointment of HOUSE SURGEON (B1). Some experience of gynaecology and obstetrics desirable. Suitably qualified R and W practitioners holding B2 appointments are invited to apply. Applications from R practitioners now holding B1 appointments cannot be considered unless they have been rejected by the R.A.M.C. Salary is at the rate of £225 a year, and the appointment is for six months in the first instance. Applications should be sent to the Secretary, Miss R. H. Tweedie.

NOTTINGHAM GENERAL HOSPITAL (712 beds, including E.M.S. beds).—Applications are invited from registered medical practitioners, male and female, including practitioners within three months of qualification who are liable to service under the National Service Acts, for the appointment of a RESIDENT CASUALTY OFFICER (A) for the above hospital. Duties to commence immediately If held by a practitioner who is liable under these Acts appointment will be for a period of six months. Salary at the rate of £200 per annum, with full residential emoluments. Applications to be sent to the undersigned.—Henry M. Stanley, House Governor and Secretary.

NORTH RIDING INFIRMARY, Middlesbrough (158 beds).—Applications are invited from registered medical practitioners (male or female) for the undermentioned appointments:—

SENIOR HOUSE SURGEONS (B2). Salary £225 per annum.

CASUALTY HOUSE SURGEON (A). Salary £200 per annum.

THIRD HOUSE SURGEON (A). Salary £200 per annum.

R practitioners who now hold (A) posts may apply for the B2 appointment, and practitioners within three months of qualification who are liable to service under the National Service Acts may apply for the A posts. The appointments are limited to six months. Applications should be sent to the undersigned:—Gerald A. Kenyon, Secretary-Superintendent.

NORTH CAMBRIDGESHIRE HOSPITAL, Wisbech.—Applications are invited from registered medical practitioners, including practitioners within three months of qualification who are liable to service under the National Service Acts, for appointment of HOUSE SURGEON (A), now vacant. Appointments will be for a period of six months. Salary £200 to £250, with full residential emoluments. Applications to the Secretary.

THE NATIONAL HOSPITAL FOR NERVOUS DISEASES, Queen Square, London, W.C.1.—The Board of Management invite applications for the appointment of two HONORARY ASSISTANT PHYSICIANS. Candidates should be Members or Fellows of the Royal College of Physicians. Doctors serving in H.M. Forces are invited to apply. Applications should be forwarded to the undersigned not later than March 1, 1946.—H. Ewart Mitchell, Secretary.

NOTTINGHAM CHILDREN'S HOSPITAL.—Applications are invited from registered medical practitioners for the appointment of RESIDENT HOUSE SURGEON (B1), woman, to become vacant on December 1, 1945. Applicants should have held house appointments and suitably qualified W practitioners holding B2 appointments are invited to apply. Salary is at the rate of £220 per annum with apartments, board, and laundry, and the appointment is for six months. Applications to be sent to the Honorary Secretary, 1, King John's Chambers, Nottingham, immediately. Selected candidates will be required to attend at the hospital for a personal interview

---

NELSON HOSPITAL, Merton, S.W.20.—Applications are invited from registered medical practitioners for the appointment of HOUSE SURGEON (B2), now vacant. Salary at the rate of £250 per annum, with full residential emoluments. R practitioners holding A posts may apply, when the appointment will be limited to six months; otherwise may be extended. Apply to the Secretary.

OLDHAM ROYAL INFIRMARY (203 beds). DEPUTY RESIDENT SURGICAL OFFICER, who will act as Casualty Officer and Orthopaedic House Surgeon (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of Deputy Resident Surgical Officer, to take charge of the Casualty Department and to work under the Orthopaedic Surgeon, now vacant. R practitioners who now hold A posts may apply, when the appointment will be limited to six months, otherwise it will be for a period of twelve months. Salary is at the rate of £200 per annum, with full residential emoluments. Applications should be forwarded to the undersigned immediately.—F. W. Barnett, General Superintendent and Secretary.

PRESTON ROYAL INFIRMARY (375 beds). Resident medical staff 8.—Applications are invited from registered medical practitioners, male and female, for the appointment of CASUALTY OFFICER (B2), including R practitioners who now hold A posts. If held by an R practitioner, appointment will be limited to six months. Salary £200 per annum, with full residential allowances. Busy department. Applications to be forwarded to the Superintendent and Secretary, Preston Royal Infirmary.

PORTWEY HOSPITAL, Weymouth (150 beds). RESIDENT MEDICAL OFFICER (B2).—The Dorset County Council invite applications from registered medical practitioners, male, for the appointment of Resident Medical Officer (B2), to become vacant on November 18, 1945, including R practitioners who now hold A posts. If held by an R practitioner, the appointment will be limited to six months. Otherwise it may be extended to a period of one year. The salary is at the rate of £200 per annum, with full residential emoluments. Applications should be sent to the Medical Superintendent as soon as possible.

QUEEN CHARLOTTE'S HOSPITAL, 339, Goldhawk Road, London, W.6.—Applications are invited for the appointment of DIRECTOR OF PATHOLOGY to Queen Charlotte's Hospital. The position is a whole-time one, and the duties will include (a) organization of the routine pathology of the hospital, (b) fostering of research in collaboration with the clinical staff of the hospital. The position is open to those engaged in any branch of pathology; a medical qualification is essential. The salary offered will be in accordance with status, but not less than £1,200 per annum, with superannuation under F.S.S.N. Those serving in H.M. Forces are eligible to apply whether they are free to take up the appointment immediately or not. Furthers particulars can be obtained from the Secretary-Superintendent, to whom applications should be sent not later than March 31, 1946.

RADCLIFFE INFIRMARY, Oxford.—Applications are invited from registered medical practitioners, male and female, for the appointment of TEMPORARY ASSISTANT SURGEON with a salary at the rate of £1,000 per annum, with the opportunity of some additional emoluments. The appointment is to be whole time for one year in the first instance. Applicants should have had surgical experience and preference will be given to candidates holding the Diploma F.R.C.S. Applications stating age, nationality, qualifications with dates, experience, and details of previous appointments and accompanied by copies of three recent testimonials or the names of three referees, should be sent to the undersigned not later than Monday, December 24, 1945. Applications by cablegram will be accepted from Service personnel, but as the post is a temporary one and has to be filled as a matter of urgency it will be a waste of time for Service candidates whose availability depends upon release under Class B to apply. Further information can be obtained from the Administrator.—A. G. E. Sanctuary, Administrator.

ROYAL FREE HOSPITAL, Grays Inn Road, W.C.1.—Applications are invited for the post of TEMPORARY HONORARY ASSISTANT ANAESTHETIST to the hospital. Candidates are expected to submit such evidence of their qualifications as they may think desirable. Applications should be sent to the Secretary not later than November 24

IMPORTANT—All applicants should read the notice at the top of page 9 about qualifications required.

HOUSE PHYSICIAN (B2).—Applications are invited from registered medical practitioners, male and female, for the appointment of House Physician (B2) to become vacant on January 1, 1946, including R and W practitioners who now hold A posts. The salary is at the rate of £100 per annum with full residential emoluments and the appointment is tenable for six months.

Applications for each post should be sent to the undersigned by November 30, 1945.—Arnold Tunstall, House Governor.

WARWICKSHIRE HOSPITALS COUNCIL. VISITING MEDICAL STAFF.—The Warwickshire Hospitals Council invites applications from registered medical practitioners holding appropriate qualifications for the following appointments on the Senior Medical Staff of the Coventry and Warwickshire Hospital, Coventry. Each appointment is remunerated, and the successful candidates will be required to practise exclusively as Consultants in their respective specialities :—

ONE GYNAECOLOGICAL AND OBSTETRIC SURGEON. Salary at the rate of £500 per annum.

ONE (additional) OPHTHALMIC SURGEON. Salary at the rate of £750 per annum (there is already one Ophthalmic Surgeon on the Hospital staff).

ONE ORTHOPAEDIC SURGEON. Salary at the rate of £750 per annum (the Fracture and Traumatic Services of the Hospital are under the direction of a Director of Accident Services; the candidate appointed to the post of Orthopaedic Surgeon will be responsible for the Orthopaedic Service only, but must have some experience in fractures and traumatic surgery).

TWO EAR, NOSE AND THROAT SURGEONS. Salary (each) at the rate of £500 per annum.

TWO RADIOLOGISTS (full-time), one in charge of X-ray Diagnostic Services and one in charge of X-ray Therapeutic Services. Salary (each) at the rate of £1 200 per annum, rising by four annual increments of £200 to a maximum of £2,000 per annum; with ability to receive private patients at the Hospital. Fees for private patients to be shared as to 1/3 to the Hospital.

Each appointment, which will be for a period of five years in the first instance, is subject to the terms and conditions of an Agreement of Service, copies of which may be obtained from the undersigned.

Applications from Service candidates are invited and the above appointments (together with the terms and conditions of the Agreement of Service) are being notified to the Directors-General at the Admiralty, the War Office and the Air Ministry, in order that they may be brought to the notice of medical officers through Service channels. Applications, giving full details as to age, medical training, experience and qualifications, and accompanied by copies of testimonials, must be received not later than March 1, 1946. The successful candidates will be required (subject to release from H.M. Forces of any Service candidate appointed) to take up their appointments on June 1, 1946.—S. Cecil Hill, Warwickshire Hospitals Council, Coventry and Warwickshire Hospital, Coventry.

WEST SUFFOLK GENERAL HOSPITAL, Bury St. Edmund's (191 civilian beds. 244 E.M.S. and reserve beds).—Applications are invited from registered medical practitioners for the following appointments: (i) HOUSE SURGEON (A) with care of Ear, Nose, and Throat Department. Salary at the rate of £175 per annum; (ii) HOUSE SURGEON (B2) with care of Special Departments, including Obstetrics and Gynaecology. Salary at the rate of £200 per annum. Full residential emoluments in each instance. Practitioners within three months of qualification and liable under the National Service Acts may apply for A post, and R practitioners who now hold A posts may apply for B2 post when appointment will be for a period of six months; otherwise for six months with a possibility of renewal at the pleasure of the Committee of Management. Vacancy January 1, 1946. Applications to be sent to E. E. Hardwicke, Secretary.

Forces are invited to apply. Salary £275, free bungalow, doctor covered by insurance scheme. Applications not later than March 3, 1946, to General Secretary, 16, Falkner Street, Liverpool, 8.

WINTERTON EMERGENCY HOSPITAL (1,060 beds).—Applications are invited from registered medical practitioners, male or female, for the appointment of ORTHOPAEDIC HOUSE SURGEON (B2), including R and W practitioners who now hold A posts, when the appointment will be for a period of six months. The salary is at the rate of £200 per annum, with full residential emoluments.

Applications are also invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A). Practitioners within three months of qualification and liable under the National Service Acts may apply, when appointment will be for a period of six months. Salary at the rate of £120 per annum, plus full residential emoluments.

Applications for each post should be sent to the Medical Officer-in-Charge, Winterton Emergency Hospital, Sedgefield, Stockton-on-Tees.

WALSALL GENERAL HOSPITAL (181 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of CASUALTY OFFICER AND ORTHOPAEDIC HOUSE SURGEON (B2), including R and W practitioners who now hold A posts. If held by an R practitioner the appointment will be limited to six months. Salary is at the rate of £200 a year, with full residential emoluments. Applications should be forwarded immediately to the undersigned.—W. H. Harper, Honorary House Governor.

WARWICKSHIRE KING EDWARD VII MEMORIAL SANATORIUM, Hertford Hill, Near Warwick (239 beds, pulmonary tuberculosis).—Applications are invited from registered medical women, including W practitioners who now hold A posts, for the post of JUNIOR MEDICAL OFFICER (B2) at the above sanatorium. No previous professional experience necessary. Salary £375 per annum plus cost-of-living bonus, with full residential emoluments. Applications to be sent to the Medical Superintendent at the Sanatorium by November 15, 1945.—L. Edgar Stephens, Clerk to the Joint Committee, Shire Hall, Warwick.

WHITEHAVEN AND WEST CUMBERLAND HOSPITAL (voluntary general hospital of 90 beds plus 50 E.M.S. beds with maternity unit, modern fracture clinic, rehabilitation centre, out-patient and casualty departments).—Applications are invited from registered medical practitioners, male or female, for the appointment of HOUSE SURGEON (A), post vacant now, including practitioners within three months of qualification who are liable to service under the National Service Acts. Appointment will be for a period of six months at a salary of £200 per annum, with full residential emoluments. Applications should be sent to the undersigned.—T. W. Lymer, Secretary-Superintendent.

YORK COUNTY HOSPITAL (222 beds).—Applications are invited from registered medical practitioners, male and female, for the appointment of HOUSE SURGEON (A), vacant immediately, whose main duties are in the Eye, Ear, Nose, and Throat Department (37 beds with busy Outpatient Clinics), but who will share in the general work of the hospital, also Casualty Duty, including practitioners within three months of qualification who are liable to service under the National Service Acts. If held by a practitioner who is liable under these Acts, appointment will be for a period of six months. Salary is at the rate of £175 per annum, with full residential emoluments. This post is recognized for D.O.M.S. and D.L.O. examinations. Applications to be sent to the undersigned immediately.—J. R. Mackrill, Secretary.

YORK MATERNITY HOSPITAL.—Applications are invited from registered practitioners, including W practitioners who now hold A posts, for the appointment of OBSTETRIC HOUSE SURGEON (B2), vacant January 1. There is a senior medical officer in charge. Duties will consist of work at the Maternity Hospital, attendance at clinics, and such other duties as may be prescribed by the medical officer of health. The appointment will be for six months, and is subject to the Council's Sick Allowance Regulations. Salary at the rate of £200 per annum, with full residential emoluments. A war bonus of 11s. 6d. per week for males and 9s. 3d. per week for females is also paid. Applications, with testimonials, to be forwarded to the undersigned forthwith.—C. B. Crane, M.B., D.P.H., Acting Medical Officer of Health, Health Department, 50, Bootham, York.

CHARGES FOR CLASSIFIED ADVERTISEMENTS

Circulation 55,500

Advertisements should reach the Advertisement Manager not later than the THURSDAY ten clear days before publication.

Cancellation cannot be accepted after 10 a.m. MONDAY for current week's issue.

To economize in accounting, postage and collection, **all advertisements should be paid for at time of order.** Publication will be in the earliest possible issue, but delay is unavoidable in present circumstances.

1. TO MEMBERS OF THE ASSOCIATION the cost of advertisements for Assistants, Dispensers, Locums, Partnerships, *Practices, Secretaries, is ten shillings for 24 words, including name and address. Four figures and £ sign count as one word (example, £2,000). When a Box Number is used, it must be reckoned as six of the total number of words in each advertisement.

1s. *extra* should be added for each insertion to cover the Box fee and postage of replies.

Additional words 2s. 6d. for every six or part.

Please mark advertisements clearly, *MEMBER*.

2. To all other (private) advertisers the charge under the headings specified above, para. 1, is 12s. (minimum) for 24 words, including name and address. Four figures and £ sign count as one word (example, £2,000). When a Box Number is used it must be reckoned as six of the total number of words in each advertisement.

1s. *extra* should be added for each insertion to cover the Box fee and postage of replies.

Additional words 3s. for every six, or part.

*SALE OF PRACTICE. The name and address of owner and of the firm negotiating the sale must accompany the advertisement. Those details are not for publication.

3. Consulting rooms, Dietetic, Duplicating, Hotels, Houses, Miscellaneous, Motor Cars, Typing, the charge is same as para. 2.

Personal, Notices, University and Industrial Appointments, minimum charge of 20s for 24 words, including name and address. Four figures and £ sign count as one word (example, £2,000). When a Box Number is used, it must be reckoned as six of the total number of words in each advertisement.

1s. *extra* should be added for each insertion to cover the Box fee and postage of replies.

Additional words 5s. for every six or less.

Educational, Hospitals, Public Health Appointments, 3s. a line, minimum charge 15s.

Births, Marriages, and Deaths.—The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender.

BOX NUMBERS.—A Box number is used in place of name and address to conceal identity of advertiser, in no circumstances will this information be divulged by this office. Separate applications should be written to each, addressed Box—, c/o B.M.J. (address as below). All applications are forwarded to the advertiser in plain closed envelopes.

TRADE ANNOUNCEMENTS. 20s. minimum 24 words. Extra words 5s. for six or less.

Every effort is made to ensure the accuracy of advertisements appearing in the Journal. No recommendation is implied by acceptance, and the British Medical Association reserves the right to refuse or interrupt the insertion of any advertisement.

Advertisement Manager, British Medical Journal,

NOTICES

APPLICANTS ARE ADVISED not to send original testimonials when replying to advertisements. Copies will answer the purpose quite as well, and in the event of their being lost or mislaid no inconvenience will ensue.

"CAN THE TUBERCULOUS BE TRAINED IN INDUSTRIAL DESIGN, ARTS, AND CRAFTS?"—A Conference for the medical profession and representatives of industry is being held on November 29, 1945, at 2.30 p.m., in B.M.A. House, Tavistock Square, W.C.1. Chairman: The Duchess of Portland. Speakers will include: Mr. Philip James, Director, Council of Arts, Dr. W. C. Fowler, Mr. H. W. Yoxall, Managing Director, *Vogue*. Invitations may be obtained from the Social Welfare Secretary, N.A.P.T., Tavistock House, W.C.1.

NATIONAL UNIVERSITY OF IRELAND APPOINTMENTS COMMITTEE can recommend a limited number of suitably qualified Medical Graduates as Locum Tenentes, Assistants, or House Surgeons. Medical men or Hospitals who require such services should apply, giving full particulars to the Secretary, Appointments Committtee, N.U.I., 86, St. Stephen's Green, Dublin. Telephone 51793.

THE FACT THAT GOODS made of raw materials in short supply owing to war conditions are advertised in this *Journal* should not be taken as an indication that they are necessarily available for export.

UNIVERSITY AND INDUSTRIAL APPOINTMENTS

APPLICATIONS are invited from registered medical practitioners, including those in H.M. Forces, for the post of WHOLE-TIME INDUSTRIAL MEDICAL OFFICER to a large engineering firm in the West of Scotland, within 10 miles of Glasgow. Candidates should preferably be under 35 years of age, and previous experience in industrial medicine is not necessary. This is a permanent post with good prospects, and is pensionable. The commencing salary will not be less than £1,000 p.a. Applications should be submitted before February 13, 1946.—Box 3052, B.M.J.

APPLICATIONS are invited from registered medical practitioners, including those in H.M. Forces, for the post of WHOLE-TIME ASSISTANT INDUSTRIAL MEDICAL OFFICER in a heavy industry. Candidates should be experienced, but not necessarily in industrial medicine. The post is permanent and pensionable. Salary £800 per annum. Applications should be submitted with at least two recent testimonials before March 1, 1946.—Box 4013, B.M.J.

EXAMINING SURGEONS: Factories Act, 1937.—The following appointment as Examining Surgeon under the Factories Act, 1937, is vacant: Garstang, in the County of Lancaster. Applications, which should be received not later than November 28, 1945, should be sent to the Chief Inspector of Factories, 8, St. James's Square, London, S.W.1.

UNIVERSITY OF ST. ANDREWS.—The University Court of the University of St. Andrews, in association with the Directors of the Dundee Royal Infirmary, invites applications for the post of LECTURER IN ORTHOPAEDICS in the University and SURGEON IN CHARGE of the Department of Orthopaedics of the Infirmary. Applications are also invited from Service candidates. By arrangement, the Lecturer will act as Orthopaedics Officer to the Corporation of Dundee, the County Council of Angus, the County Council of Perth, the Town Council of Perth, and the Town Council of Arbroath. He will also be given an honorary appointment by the Department of Health for Scotland as Visiting Orthopaedic Surgeon to Stracathro E.M.S. Hospital. Suitable professional assistance will be provided as the scheme develops. The stipend for the combined offices (inclusive of travelling expenses) will be £1,250 per annum, and the Lecturer may engage in private practice as an Orthopaedic Surgeon in so far as this does not interfere with the discharge of the duties of the above appointments. Applications, supported by testimonials and/or references, will be received up to January 29, 1946. If desired, further information may be obtained on application to the undersigned.—David J. B. Ritchie, Secretary to the University of St. Andrews, the University, St. Andrews.

UNIVERSITY OF ST. ANDREWS.—The University Court of the University of St. Andrews invites applications for the BUTE CHAIR OF ANATOMY in the United College, St. Andrews. The stipend attached to the Chair is £1,450 per annum. Further particulars may be obtained from the undersigned with whom applications should be lodged not later than March 31, 1946. The date on which the appointment will take effect has been left open to meet the case of applicants now serving with the Forces but will not be later than October 1, 1946.—David J. B. Richie, Secretary, the University, St. Andrews.

UNIVERSITY OF DURHAM. King's College, Newcastle-upon-Tyne.—Applications are invited for the post of TEMPORARY DEMONSTRATOR IN PHYSIOLOGY in the Medical School of King's College. Salary £300/£400 per annum according to qualifications and experience. Duties to commence on January 7, 1946, or, if the successful applicant is now serving in H.M. Forces or on other national service, on release. Ten copies of applications, with the names of not more than three persons to whom reference may be made, should be sent not later than November 30, 1945, to the undersigned from whom further particulars may be obtained.—G. R. Hanson, Registrar of King's College.

UNIVERSITY OF LIVERPOOL. ASSISTANT in the Department of Pathology.—Applications are invited from registered medical practitioners, male or female, for the above appointment. The successful applicant will share in the general work of the department and in particular assist in the maintenance of the pathological register of the Liverpool Cancer Control Organization. The appointment will be for one year in the first instance. Salary at the rate of £450 to £650 per annum, according to experience and qualifications. Applications should be received not later than November 30, 1945, by the undersigned, from whom particulars may be obtained.—Stanley Dumbell, Registrar.

SUPPLEMENT TO THE

BRITISH MEDICAL JOURNAL

LONDON SATURDAY NOVEMBER 17 1945

British Medical Association

PROCEEDINGS OF COUNCIL

Wednesday, Nov. 7, 1945

A meeting of the Council of the Association was held on Nov. 7 and lasted the whole day. For the first time in, at all events, the recent history of the Council every member was present. The Minister of Health, Mr. Aneurin Bevan, was the guest of the Council at a fork luncheon. This was the first official contact of the Association with the new Minister, who accepted the invitation with a view not to making a speech but to meeting the members individually and conversationally.

Dr. H. GUY DAIN was in the chair of the Council.

Preliminary Business

The Council received with regret the intimation of the death of a former member, Dr. David F. Todd of Sunderland.

Representatives were appointed on a number of outside bodies to fill vacancies caused by resignation or decease.

An interesting report was received from Dr. Aubrey Lewis, representative of the Association on the Population Investigation Committee, which, jointly with the Royal College of Obstetricians and Gynaecologists, is sponsoring an inquiry into the maternity services of the country.

The Council considered certain resolutions of the last Annual Representative Meeting. The resolution about diplomatic representation of the medical profession was referred to the International Relations Committee. The request to the Council to make concrete proposals for safeguarding private practice under a "comprehensive" National Health Service was referred to the General Practice Committee.

It was stated that the Medical War Relief Fund Committee had resolved that an early appeal should be made for contributions in view of the anticipated heavy demands on the Fund from released Service doctors needing assistance to re-establish themselves in civil practice. The Chairman said that a time had come when something large and useful was needed, and the appeal, which would be made in the medical journals at the beginning of December, was already assured of a substantial send-off. The "target" would be £100,000.

Protection of Practices

Dr. E. A. Gregg, on behalf of the committee concerned, brought forward a report on the Protection of Practices Scheme. He said that the committee's advice had been sought by a number of Local Medical War Committees as to the difficulty which would arise where a patient of an absentee doctor who had been attended by an acting practitioner during the war desired to transfer to the acting practitioner's list after the absentee had returned. It had decided that it could not concur in any departure from the principle embodied in local schemes that an acting practitioner was bound by the terms of his undertaking not to accept a patient on his own behalf for a period of twelve months after the date of the return of the absentee. Dr. Vaughan Jones suggested that while this was ideal it was not in all cases practicable; it would do away with free choice of doctor.

The Chairman hoped that the principle would be sustained; if there were exceptional cases each must be dealt with on its merits, but it was important to uphold the undertaking which the acting practitioner had made with the local committee. Dr. N. E. Waterfield said that on any breach of this rule it would be open for a complaint to be made to the Central Ethical Committee. Dr. F. Gray suggested that the problem might be looked into again with a view to possible easements to meet difficult cases.

The report was approved. It contained also an account of the Essex scheme for securing to each returning doctor for a limited period payment out of the Practitioners' Fund of not less than he was receiving in 1939. This scheme was approved provided the local insurance practitioners were consulted and manifested no substantial opposition. A further item in the report related to a case in London in which an acting practitioner had not honoured his agreement. The case had been taken to the High Court and judgment given against the practitioner.

Salary Scale for Public Health Medical Officers

Dr. James Fenton, the newly appointed chairman of the Public Health Committee, said that his committee had considered the resolution of the last Annual Representative Meeting that negotiations for a scale of salaries to replace the Askwith agreement should be conducted with the Government as part of the negotiations for the whole profession and not, as on previous occasions, with associations of local authorities. It was in agreement with the first part of the resolution, but some members thought that negotiations on conditions of service of whole-time public health medical officers who were employed and paid by local authorities should be conducted between representatives of those officers and of local authorities; also that centrally determined scales could have no real effect unless the agreement of local authorities was secured. On the other hand, attention was drawn to the method by which the Rushcliffe scales for nurses had been imposed upon local authorities by the Government. The committee still had under consideration the revised scale of salaries to replace the Askwith agreement; it had been asked to review certain recommendations in the case of officers in the mental health service, and the Medical Superintendents Society was also submitting proposals. The committee would report later if it was considered desirable to make any modification of the proposals put forward, and meanwhile it recommended, as a resolution to be conveyed to the Minister of Health and the Negotiating Committee, that the negotiations with regard to salaries and conditions of service for doctors in the public health and municipal hospital services be conducted with the Government as part of the negotiations for the whole profession.

This was agreed to by the Council.

Equal Cost-of-living Bonus

Dr. Fenton further said that his committee had accepted the principle of equal cost-of-living bonus for men and women, believing that although the amounts involved were small the principle was important. The matter had been discussed with representatives of the Medical Women's Federation, who recognized that it would be difficult for the Association to refuse publication of advertisements which were in conflict with the principle. In due course cost-of-living bonuses would probably be consolidated with salaries, and therefore the Federation felt that every other step that was possible should be taken to implement the policy, otherwise it would be difficult to maintain the principle of equal pay when such consolidation took place. The Public Health Committee's view was that the question of equal bonus should be left in abeyance until the new salaries and conditions of service of public health medical officers were dealt with by the Negotiating Committee, and that the Negotiating Committee should be asked to take steps to secure implementation of the Association's policy in the new scales.

Dr. Janet Aitken said that she feared it would take a long time for the new agreement replacing the "Askwith" to be implemented, and meanwhile this question of equal bonus would hang over. Every opportunity should be taken to press forward this policy. Col. A. H. Proctor said that it was for the Medical Women's Federation to decide what policy they should take to establish this principle and for the Association to give them every support in its power.

The report of the committee was approved.

A Belated Reference

Dr. Fenton said that certain recommendations had been received from the British Association of Otolaryngologists on the terms of service of ear, nose, and throat specialists under Government Departments and public authorities. These recommendations had already been circulated to Government Departments and local authorities' associations, and were now passed on to the B.M.A. in the hope that it would see its way to adopt them. "If any body of doctors wants our support," said Dr. Fenton, "they ought to come to us before they publish and broadcast their scale, and I hope that will be brought to the notice of all bodies concerned. It should be well known that we are not going to commit ourselves to support scales of salaries that are not brought to us before they are published."

In this case the Public Health Committee had deferred consideration of the matter until the Council had had an opportunity of considering a recommendation from another committee that the Association's scale of fees for doctors (including ear, nose, and throat specialists) employed part-time by local authorities was inadequate for present-day purposes.

At a later stage of the Council meeting the Special Practice Committee brought forward a recommendation that the necessary steps be taken to revise the existing scale of fees for consultants employed on a part-time basis by local authorities. The recommendation was agreed to, and a special committee was set up to carry out the work of revision.

Fees for Life Insurance Examinations

Dr. S. Wand, chairman of the General Practice Committee, proposed that it be recommended to the Representative Body that the agreement reached with the Life Offices Association in 1919 concerning fees for medical examination for life insurance should be terminated. He explained that three years ago the Life Offices Association was urged to increase the fees by 20%, but replied that the proposed increase was not justified, and adhered to this contention when met by a deputation. There was a growing volume of complaint from members about the inadequacy of these fees. For example, the fee for medical examination for industrial insurance was 5s. minimum or 10s. 6d. according to the form of report, and for the ordinary branch of industrial offices and ordinary offices which issued policies whose average amount was small the minimum fee for medical examination was 10s. 6d. for policies up to £100, and 21s. for those over £100. When a practitioner complained to an insurance company that the fees were inadequate he was informed that they were approved by the Association under the 1919 agreement. The committee therefore felt that the agreement should be ended and a new scale of fees drawn up for submission to the Representative Body as an alternative policy.

The recommendation was carried.

Compensation and Superannuation

Dr. Wand also presented a report on behalf of the Compensation and Superannuation Committee. He said that if the question of compensation was raised as part of the Government's proposals for a National Health Service it must be assumed that the question of compensation for all general practitioners was automatically raised, and that any assessment of the value of practices should be based upon the value over an agreed pre-war period. The Committee felt that the position would be safeguarded by making it clear that if it was decided that the value of practices in the years immediately before the war was the basis of calculation for compensation purposes an adjustment would be necessary to take account of the changed value of money.

The committee had had a general discussion on possible schemes of superannuation, but it was felt that no definite proposals could be formulated until the Government's attitude on the compensation issue was known.

National Health Service: the Government's Intentions

Certain resolutions of the Representative Meeting concerning the national health service proposals were on the agenda, and the recent statements in the Press concerning the nationalization of hospitals were also mentioned. The Council was informed that according to statements in the Press the Government had in mind the establishment of a national hospital service, with responsibility for hospitals removed from both voluntary bodies and local authorities. The newspapers said that this had been approved by the Cabinet in principle; it had apparently not been discussed with either the local authorities or the representatives of voluntary hospitals, and certainly not with the British Medical Association or the Negotiating Committee.

After much discussion it was agreed to defer further consideration until after the meeting with the Minister. In a short extempore speech at the Council luncheon—an informal gathering at which it had been intimated that speeches were not expected—Mr. Bevan spoke of his pleasure at meeting the Association. There were matters on which he intended to ask the advice of the Association, with which he hoped to enter into "harmonious negotiation" on terms and conditions of service. He was very conscious of the extreme difficulty with which general practitioners had carried on their work during the six years of war and of the shortage of man-power in the profession, but he looked forward to the return of a large number of doctors from the Forces as a great easing of the situation. He said that he would soon be publishing a statement. He repeated that "we" had no prejudice or inhibitions. What was desired was to create for the people of Great Britain the best kind of service that medical science could provide, and in that he was sure he would have the enthusiastic support of the members of the profession.

After lunch the Council resumed its examination of the present position. It was decided to communicate with the Minister reminding him of the composition and functions of the Negotiating Committee and of the interest of the profession in all aspects of the proposed health service, and requesting that the Negotiating Committee, as representing the whole profession, should be consulted by him before final decisions are reached and before the Bill is published.

Hospital Policy

Mr. R. L. Newell, chairman of the Hospitals Committee, brought forward draft agreements for co-operation with the Medical Superintendents Society and the Association of Municipal Specialists with the object of securing uniformity of action between either of these bodies and the B.M.A. on matters of policy affecting their common interests. It looked to him as if the forces were mobilizing under the leadership of the Association before the impending storm.

The terms of agreement with the two bodies were approved.

It was agreed that there should be sent to hospital authorities a letter clarifying and amplifying the Association's policy on the postponement of the retirement of practitioners who have been absent on national service.

Mr. Newell said that the committee had considered the question of payment of visiting medical staffs of hospitals in respect of patients who were the financial responsibility of the Ministry of Pensions. The committee had authorized its chairman and three other members to meet the Ministry and discuss the matter.

Proposed Group of Homoeopathy

Sir John Weir, Dr. W. L. Templeton, and Dr. Agnes Moncrieff, representing the Faculty of Homoeopathy, attended in support of a petition signed by 87 members of the Association for the establishment of a Group of Homoeopathy. The Council had previously decided against such a claim, but the Faculty desired to send representatives and to press certain other points.

Sir John Weir said that the request for the formation of a Group had been made chiefly in view of a possible State service. At the moment, under a free and uncontrolled system of medicine, homoeopaths had no outstanding professional interests which differed essentially from those of the rest of the profession, because arrangements could be made between patient and doctor in regard to availability of service and its remuneration; but under a fixed State service this would not be so. Homoeopathic physicians were specialists in the sense that they practised in accordance with principles fundamentally different from those generally followed. Patients came from all over the country to consult their physicians, who, in turn, must travel equal distances when occasion demanded. Homoeopathic hospitals, for similar reasons, drew their patients from all parts of the country. Another point which affected homoeopaths was the possibility of direction in practice when appointments would be under the control of joint authorities. If a doctor who had been practising homoeopathy retired or died and a practitioner knowing nothing about the system were appointed the patients would find themselves without the treatment they desired. Another point was the large proportion of chronic cases which seemed to drift to the homoeopath. Consideration of the needs of these patients naturally took longer, and as a result fewer could be seen in a day. This might penalize the homoeopathic practitioner under the scheme by curtailing his list if he was in general practice. At the moment homoeopathic treatment under National Health Insurance was possible only where the doctor was subsidized by private practice, and this would not be possible under a National Health Service once it was recognized as the normal way of obtaining health services. As a Faculty they felt that they would rather have their difficulties put forward from within the B.M.A., as from a Group of the Association itself, than go separately to the Minister. He added that they were accorded an interview by the late Minister, by whom their particular difficulties were considered sympathetically.

Dr. Templeton said that their claim rested in no way essentially on any difference of therapeutic methods. They wanted the Council to realize that they had these special difficulties, and he hoped that homoeopaths might be dealt with much as the Church dealt with the wandering friars in the Middle Ages —namely, by absorption, not exclusion. In reply to questions as to the numbers of homoeopaths, Dr. Templeton said that the membership of the Faculty (formerly the Society) had increased by a small number during the last ten years. The Faculty had 206 members, but many more were practising homoeopathy.

Dr. Wand asked whether the purpose of the petition was to ensure the proper presentation of the case for homoeopathy in the new National Health Service rather than to set up a permanent Group. Dr. Templeton replied that their difficulties had been brought to a focus by the new proposals. The Chairman asked what difficulties homoeopaths had experienced under National Health Insurance, and on being told that they had had no difficulties he suggested that if similar conditions applied to the whole population they would not be any worse off. Dr. Templeton replied that the homoeopath had only a small insurance practice, subsidized by his private practice, and those conditions would not obtain under an all-in system.

Dr. J. B. Miller asked whether, in view of the smaller insurance lists of homoeopaths, it was suggested that their capitation fee should be greater. Dr. Templeton said that it was not for them to make suggestions: they were only stating their difficulties. Mr. Zachary Cope asked if, supposing arrangements were agreed to whereby private practice was safeguarded, there would be any need for a special Group. Dr. Templeton replied that there was an "if" in that question, but he asked whether homoeopaths must wait until faced with a *fait accompli* before taking steps to safeguard their position. In reply to Dr. F. H. Bodman he said that it would be grossly unfair if anybody but a trained homoeopathic physician were appointed to a homoeopathic hospital. The Chairman pointed out that it was Association policy that the hospital concerned should be the body to appoint the staff, and Dr. Templeton said that would solve their problem. Most of their hospitals were bound to limit the choice of physicians to those who held the diploma of the Faculty.

The deputation then withdrew.

The Chairman said he thought the answer to the homoeopaths was that National Health Insurance had not interfered with their practice and that this disposed of any claim to be a separate Group on medico-political grounds. Dr. J. W. Bone said that it seemed to him that the homoeopaths could get all the help they wanted from the Insurance Acts, the General Practice, and the Special Practice Committees.

The Secretary said that there were two methods within the present arrangements of the Association for examining the problems of particular groups. One was by the constitution of special Groups, and the other was by special arrangements such as they had already with medical officers of health, municipal specialists, medical superintendents, and others. If the request for a Group was not granted the Council might reply to the present request on the lines that it sympathized with the problems of the homoeopaths, would afford them every help, and would be glad to discuss with them the arrangements by which their views on medico-political problems could be obtained and considered as the negotiations on the National Health Service proceeded. It would be exactly the same sort of problem as they would have to consider in relation to the Medical Women's Federation—a problem deriving from the relative sparseness of distribution of the practitioners and the wider areas from which they drew their practice.

It was agreed that the reply be sent to the Faculty on the lines indicated by the Secretary.

The Education Act, 1944

Mr. Newell presented the report of the Special Committee set up to consider hospital and general practitioner services and other matters arising under the new Education Act.

Dr. Fenton gave a report of the deputation which met the officers of the Ministry of Education on October 25. He said they reminded the officers of the Ministry that the Coalition Government and the "Caretaker" Government had given an assurance which they now sought from the present Minister—namely, that the development of the school medical service should be so controlled as to ensure that it would not be inconsistent with or duplicate the arrangements to be made for the purposes of the National Health Service of the future. The officers said there was no reason to believe that the present Minister would take any other view than that nothing should be done to prejudice the National Health Service arrangements. It was pointed out by the deputation that it was the Minister who had introduced this service, and that the profession did not favour a system whereby the Minister gave a maintenance grant to a hospital for this purpose and the profession were expected to have some proportion of it; they wanted direct payment on the basis of service rendered. They also wished the general practitioner to have his proper place in the scheme. The officers could not give an assurance that there would be created a central liaison in connexion with the schemes now being developed locally, but it was a matter to which very careful thought would be given, and he believed the deputation impressed the officers that such an arrangement would be desirable. He felt that the deputation was a successful one. The present report must be regarded as of an interim nature.

The report was approved.

Consultants and Specialists

Prof. A. H. Burgess, chairman of the Special Practice Committee, brought forward a proposal for the establishment of a new standing committee, to be known as the Consultants and Specialists Committee, to take the place of the present Special Practice and Group Committees. It was proposed that it be constituted with 20 members elected on a regional basis by those engaged exclusively in consultant and specialist practice, 5 elected on a national basis by members engaged part-time in consultant and specialist practice, one member appointed by the committee of each of the eight Groups, and other members appointed by the Council, the Representative Body, and certain other committees of the Association. A further proposal was that steps be taken to establish a list of part-time consultants and specialists for use as an electoral roll for the purpose of election to the new committee. On the subject of part-time consultants and specialists the Council was asked to reaffirm its opinion that the formation of a special group was unnecessary and undesirable, and that the interests of these members would best be safeguarded through representation on the proposed new committee.

Dr. O. C. Carter said that there had been a strong feeling during the last few years that part-time consultants would not get a square deal in the new National Health Service. After the last Representative Meeting he was asked by a number of part-time consultants to voice their views and to endeavour on the Council to get something done to implement the manifest desire of the Representative Body in this respect. Part-time consultants were a very large body of practitioners and should have some machinery to safeguard their interests. He did not feel that the new committee would be a satisfactory compromise. He suggested that it be recommended to the Organization Committee that another standing committee be set up to go into the question of safeguarding the interests of part-time consultants and specialists.

The Chairman pointed out that the proposed new committee corresponded largely in constitution to the Insurance Acts Committee, though, unlike the latter, it did not include non-members of the Association. There was a special reason for the inclusion of non-members on the Insurance Acts Committee because all insurance practitioners were under a contract of service. With regard to the proposals concerning part-time consultants and specialists, there had never been any suggestion that they should be treated in the matter of contract in the new service in any way different from the whole-time consultants and specialists. For such work as he did as a specialist the part-time man should have the pay and be under the conditions of a specialist, and for such work as he did as a general practitioner the pay and conditions of a general practitioner should apply.

The proposals were adopted. It was also agreed that the expressions of opinion of consultants and specialists in relation to a National Health Service as elicited at open meetings in all the regions in the early part of the present year should be passed on to the Negotiating Committee.

Other Organization Matters

Dr. J. A. Pridham, as chairman of the Organization Committee, presented a report which included recommendations for grouping the Divisions in Northern Ireland for the election of members to the Northern Ireland Committee, and for forming within the Association a group of practitioners engaged predominantly in the practice of dermatology. These proposals were approved.

Dr. Pridham mentioned that the membership of the Association on October 16 was 51,217. During the last year the number of names in the *Medical Register* had increased by 1,000, and the membership of the Association by 3,000. When the members of the Medical Association of South Africa dropped away, however, at the end of the present year there would be a fall of over 2,000. (During the present Council Meeting 318 candidates serving in the Forces were elected by the Council as members of the Association.)

The Chairman brought forward a motion for the reconstitution of the Ophthalmic Group Committee consequent upon the formation of a new body called the Faculty of Ophthalmologists, organized by and taking the place of the Council of British Ophthalmologists. This was approved, and approval was also given to an agreement for a working arrangement between the Association and the Faculty on medico-political policy.

The Association Building

Mr. A. M. A. Moore presented a report from the Building Committee with recommendations for the allocation of additional space for departments of the Association in Tavistock House as soon as circumstances permitted and also for an extension of the library accommodation. The committee had further proposed that the centre room, over the archway from Tavistock Square, should be suitably decorated and furnished and set aside for receiving distinguished guests at B.M.A. House. This last proposal, however, was referred back for further consideration; the other proposals were agreed to, and recommendations with regard to the tenancies on the property were also approved.

Mr. Zachary Cope, as chairman of the Science Committee, mentioned the pressing question of library accommodation. He said that owing to the gradual return to peacetime conditions and the increased demand for books and library facilities the extension of accommodation had become a matter of urgent importance. It had been suggested that when the wing now used by the Historical Research Library was again available the Association's library might be housed there, and in the meantime extra house room might be found for the librarian and his staff. While this might improve the position temporarily, it was felt that the importance of the library to the normal activities of the Association demanded a long-term policy which would mean a considerable extension of the whole library. On the recommendation of the Finance Committee it was agreed that the construction of an annexe to the existing library should be approved, and a report was called for upon possible further improvements.

Rehabilitation

Several recommendations were brought forward by the Rehabilitation Committee. The first concerned hospital almoners, of whom at present there was said to be a great shortage. The committee recommended, and the Council approved, an expression of the opinion that the almoner is an essential link in the efficient functioning of a rehabilitation service and that the provision of a better status and more recruits to this profession is an urgent need.

The committee had considered the National Insurance (Industrial Injuries) Bill and submitted the following recommendations, all of which were agreed to: (1) That there is insufficient medical membership on the House of Commons Standing Committee which is dealing with the Bill; (2) that the rates for sickness and disablement benefit should be substantially the same; (3) that if a person injured in the course of his employment can be trained for some alternative employment without loss of earning capacity he should receive the flat-rate disability allowance while undergoing this training; (4) that adequate financial provision should be made for those exceptional cases in which a person cannot be reinstated in his own work and cannot be trained for equivalent employment.

It was also agreed to reaffirm the decision of the last A.R.M. that the Ministry of Health should be concerned with all civilian health services in which the Government is involved and with none other; that apart from the Industrial Injuries Advisory Council set up under the present Bill, there should be established a medical advisory committee composed entirely of doctors to advise the Minister on the medical problems; that all cases of dispute on medical issues should be referred to medical boards and not to individual practitioners; and that the assessment of prescribed industrial diseases should be the responsibility of the proposed medical advisory committee. A further recommendation was carried, arising out of the dissatisfaction with the present arrangements whereby the D.R.O assesses the suitability of the person for employment from medical evidence which he is not qualified to interpret. It asked that a medical board should be set up in each region to include an industrial medical officer and, when available, the examining surgeon, to which all applicants to the Register of Disabled Persons should be referred and which should advise the D.R.O. on the medical aspects of the case.

The Chairman offered the congratulations of the Council to Dr. Vaughan Jones, deputy chairman of the committee, on the work he had done in collating the facilities for rehabilitation which existed at the present time.

Other Business

A report from the Dominions Committee was presented by Dr. J. L. Gilks. Dr. J. B. Miller, Chairman of the Representative Body, said that until he came into contact recently with the work of the committee he had no idea that it was so detailed and extensive.

Dr. R. G. Gordon presented a memorandum of evidence submitted on behalf of the Association to the Interdepartmental Committee on the Care of Homeless Children. The memorandum was approved and Dr. Gordon was thanked for the outstanding part he had taken in its preparation.

The Naval and Military Committee, through Col. Proctor, its chairman, brought forward a report on war gratuities. It was satisfied that no useful purpose would be served by urging a general increase.

It was reported that arrangements for the publication of the "Charter of Health" were in hand, and it was expected that the publication would take place in January.

The Association's booklet *The Returning Doctor*, for the information of medical officers released from the Forces, was before the Council, and those concerned were congratulated on an excellent compilation.

It was agreed that representations be made to the Ministry of Health concerning the inadequacy of fees paid to public vaccinators.

A proposal was approved for the appointment of a permanent joint committee of representatives of the Association and of the Magistrates' Association to consider matters of common interest relating to psychiatry and the law.

On the motion of Dr. Waterfield it was agreed that there should be an appropriate memorial in B.M.A. House to the late Mr. Bishop Harman.

It was agreed that suitable letters of thanks be forwarded to the following honorary secretaries who have lately relinquished office: Dr. O. C. Carter (Bournemouth Division), Dr. R. B. Hick (Swindon Division), and Dr. D. A. Urquhart (Shropshire and Mid-Wales Branch).

Reports on routine matters by the Ethical Committee, the Journal Committee, the Finance Committee, the Office Committee, and the Scottish, Welsh, and Northern Ireland Committees were adopted. The Northern Ireland Committee report, presented by Dr. J. M. Hunter, was the first since the constitution of that committee.

Association Notices

OPHTHALMIC GROUP COMMITTEE

The Council of the B.M.A. at its meeting on Nov. 7 approved:

(*a*) The reconstitution of the Ophthalmic Group Committee of the Association as follows:

13 members directly elected by members of the Group in the regions as at present constituted.

6 members elected by the Council of the Faculty of Ophthalmologists.

2 members elected by medical practitioners (not eligible for membership of the Group) for the time being approved for examination of patients under the National Eye Service.

1 member appointed by the Council of the B.M.A.

1 member appointed by the Insurance Acts Committee of the B.M.A.

(*b*) The following agreement for a working arrangement between the British Medical Association and the Faculty of Ophthalmologists on medico-political policy affecting medical practitioners engaged in the practice of ophthalmology:

1. If the Faculty of Ophthalmologists desires to formulate and urge upon central or local authorities, or other bodies, any medico-political policy affecting the interests of public or private practice, or is consulted thereon by such authorities or bodies, it shall communicate its proposals to the British Medical Association before taking action.
2. If such policy or proposals are approved by the British Medical Association either in their original form or in an agreed amended form, all action consequent thereon shall be taken through the appropriate machinery of the Association.
3. If the proposals of the Faculty of Ophthalmologists are not approved by the Council of the British Medical Association, or if the Faculty is dissatisfied with the form in which the Council of the British Medical Association is willing to take action thereon, it shall be open to the Faculty of Ophthalmologists to take action independently.

These proposals had previously been submitted to and approved by the members of the Ophthalmic Group Committee and the Council of the Faculty of Ophthalmologists.

Nominations for the election of members of the Ophthalmic Group Committee for the normal period, three years, have been received as follows:

Region 1 (3 seats):
- G. W. Black, F.R.C.S., Leeds.
- S. H. Faulkner, M.D., D.O.M.S., Manchester
- F. Gamm, M.B., Ch.B., Huddersfield
- E. G. Mackie, F.R.F.P.S., D.O.M.S., Sheffield
- A. McKie Reid, F.R.C.S., D.O.M.S., Liverpool
- D. D. Stenhouse Stewart, D.O.M.S., Hull

Region 2 (2 seats):
- L. P. J. Evans, F.R.C.S., Birmingham
- N. P. R. Galloway, D.O., Nottingham

Region 3 (2 seats):
- W. S. Burr, F.R.C.S.Ed., D.O.M.S., Plymouth
- J. J. Healy, M.B., Ch.B., Llanelly
- F. Heckford, D.O.M.S., Ryde, I. of W.
- David Wilson, M.B., B.S., Torquay.

Region 4 (3 seats):
- J. D. M. Cardell, F.R.C.S., London
- J. H. Doggart, M.D., F.R.C.S., London
- Sir Stewart Duke-Elder, M.D., F.R.C.S., London
- L. M. Green, D.O.M.S., London
- F. W. Law, M.D., F.R.C.S., London
- J. Minton, F.R.C.S., London
- O. Gayer Morgan, M.Ch., F.R.C.S., London
- Humphrey Neame, F.R.C.S., London.
- A. S. Philps, F.R.C.S., London
- F. E. Preston, D.O.M.S., London.
- M. H. Whiting, F.R.C.S., London
- Charles W. Yow, M.D., London

Region 5 (1 seat):
- J. E. H. Cogan, D.O., Tunbridge Wells
- F. Oliver Walker, D.O., Dartford

Region 6 (2 seats):
- W. A. Anderson, M.D., Belfast
- C. R. Duncan Leeds, F.R.C.S.Ed., D.O.M.S., Edinburgh
- John Marshall, F.R.F.P.S., D.O.M.S., Glasgow

Non-members of Group engaged in National Eye Service work (2 seats):
- A. G. Lumsden, M.B., Ch.B., London, W.1.
- R. Gordon-Simpson, M.B., B.S., D.T.M., London, N.21
- C. M. Stevenson, M.D., Cambridge
- R. Colston Williams, M.R.C.S., L.R.C.P., London, W.1.

Where there are contests voting papers will be issued on Nov. 16.

CHARLES HILL,
Secretary.

Nov. 8, 1945.

Areas of North Caernarvon and Anglesey, and South Caernarvon and Merioneth Divisions, and Shropshire and Mid-Wales Branch

Notice is hereby given of the following proposals made by the Welsh Committee for adjustment of the areas of the North Caernarvon and Anglesey, and South Caernarvon and Merioneth Divisions, and the Shropshire and Mid-Wales Branch:

1. That the South Caernarvon and Merioneth Division be discontinued.
2. That the area of the North Caernarvon and Anglesey Division be extended so as to be conterminous with that of the counties of Caernarvon and Anglesey; and that the name of the Division be altered to Caernarvonshire and Anglesey.
3. That a Merionethshire and Montgomeryshire Division, comprising the Counties of Merioneth and Montgomery, be formed.

Any member affected by these proposals and objecting thereto is requested to write to the Secretary of the Association by December 19, 1945, stating the objection and the ground therefor.

CHARLES HILL,
Secretary.

Nov. 10, 1945.

Meetings of Branches and Divisions

SOUTHERN BRANCH

At the annual meeting of the Southern Branch held at Winchester on Aug. 30, which was preceded by a luncheon, Dr. R. H. Balfour Barrow was elected president for 1945–6 and Dr. John Clayre re-elected hon. secretary and treasurer. Dr. R. Arderne Wilson, of Guernsey, immediate past-president, attended the meeting, this being his first visit to England since the enemy occupied the Channel Islands. He was warmly welcomed, and gave a most interesting account of conditions in Guernsey during the occupation. Dr Thomas Beaton reported on a visit he had recently made to Jersey. The meeting approved the work of the Branch Council in the last two years (which had been done mainly by the officers owing to the difficulty of holding routine meetings), particularly the measures taken to supply literature and some instruments to colleagues in the Channel Islands. The meeting concluded with an address by the president entitled "Having Eyes, they See Not."

Branch and Division Meetings to be Held

AYRSHIRE DIVISION.—At Ayrshire Central Hospital, Irvine, Sunday, Nov. 18, 7 p.m., Clinical Meeting.

EAST HERTS DIVISION.—At Mayflower Hotel, Hertford, Thursday, Nov. 29, 8.15 p.m., Dr. Alan Moncrieff: Recent Advances in Diseases of the Newborn.

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Nov. 25, 11 a.m., Mr. D. W. Currie: Minor Gynaecological Ailments.

Correspondence

Health Centres and the Scientific Method

SIR,—I do not wish to prolong this correspondence, but I must correct one or two points in Dr. Laurence Phillips's letter (*Supplement*, Oct. 13, p. 85) which give wrong impressions. In one of my letters I stated that research into minor maladies must be based on the spirit of friendship. Any obligatory assignment of doctor or patient cannot fulfil my ideal, for it would introduce an atmosphere of compulsion. When compulsion enters into human relationships, friendships vanish.

If I understand Dr. Phillips aright his argument in the second paragraph amounts to this: that the great interweaving of doctors' practices brought about by the use of motor-cars makes health centres more than ever justifiable and desirable. The reverse is the truth. The defects of health centres would not be so great where doctors had to walk their rounds. It might, however, be difficult to give gainful employment to six doctors in a health centre under those circumstances unless the density of population was great. All this may seem very puzzling, but the explanation can be made obvious by using a map of any urban area and spotting the panel patients attached to the various practitioners, using a different colour of spot for each doctor. Draw that critical "five-minute" circle round each doctor and then around any point selected for the health centre. Count the number of the doctor's spots in his circle and then the number of his spots in the "health centre" circle. This will also supply the effective answer to Dr. Phillips's argument that six doctors "working in a health centre could produce data at least as reliable as six doctors working in their own areas." It will be seen to be impossible. The reliability of a sample depends upon its size. Its probable error diminishes as the numbers in the sample increase. The combined work of six doctors working in their own areas would produce a larger and therefore a more reliable sample than the same doctors could produce working from a health centre.

The final paragraph of Dr. Phillips's letter is devoted to a criticism of statistics. I sincerely regret that I cannot attempt to explain its theory. The knowledge I possess on the subject was acquired through necessity, not through inclination, and it was subsequent to the discovery that there are sequences among minor maladies which are incredible in their implication. To study these scientifically some knowledge of statistics will be essential to the general practitioner. He can put that knowledge to many uses, including a study of the plausible theories of health centres.—I am, etc.,

Halifax. A. GARVIE.

*** This correspondence is now closed.—ED., *B.M.J.*

Registrarships for Released Service Doctors

SIR,—Lieut.-Col. F. F. Hellier has made an urgent plea (*Journal*, Oct. 6, p. 477) that an authoritative statement be issued defining the conditions under which released M.O.s would be granted registrar appointments under the much-publicized scheme of the Ministry of Health. This plea seems to have gone unanswered. During the next two to three months a large proportion of those recognized as specialists in the Services will be released. What will be their position if they did not hold civilian staff appointments before the war?

On the one hand, the scheme referred to is so hedged round with conditions that few of them will be eligible to benefit by it; on the other, civil hospitals, which have not filled staff appointments during the war—for which fact those in the Services are grateful—still keep their appointments "frozen." Even were the thaw to set in immediately it seems likely that at least another six months must pass before anyone now being released and hoping to embark on a specialist career can expect to begin.

The war is over, there is in process a reasonably rapid release from the Services, then why need there be further delay in advertising staff vacancies provided due notice is given?—I am, etc.,

Wolverhampton. J. V. MACGREGOR.

H.M. Forces Appointments

ARMY

War Subs. Major J. K. Slater, O.B.E., R.A.M.C., to be a Consultant, and has been granted the local rank of Brig.

ROYAL ARMY MEDICAL CORPS

To be Majors: War Subs. Majors A. B. Dempsey, W. Stewart, M.B.E., J. A. Davidson, M. H. P. Sayers, O.B.E., D. P. Stevenson, G. A. E. Harman, K. G. F. Mackenzie, and A. T. Marrable, D.S.O.; Capts. E. A. Smyth, J. A. G. Carmichael, W. N. L. Haynes, J. F. Wilson, J. R. Kellett, M.B.E., and I. N. Fulton.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Mr. C. W. Flemming, F.R.C.S., at 5, Upper Wimpole Street, W.1; Dr. Gordon B. Mitchell-Heggs, F.R.C.P., at 88, Harley Street, W.1; Miss Jocelyn A. M. Moore, F.R.C.S., M.R.C.O.G., at 4, Devonshire Place, W.1; Dr. J. D. W. Pearce, at 13, Harley Street, W.1; Mr. H. B. Stallard, F.R.C.S., at 24, Harley Street, W.1.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Neurology at West End Hospital for Nervous Diseases, Mondays, Tuesdays, and Fridays, 2.30 p.m., Nov. 19 to Dec. 14. (2) Week-end course in general medicine and surgery, at North Middlesex County Hospital, all day, Saturday and Sunday, Dec. 1 and 2. (3) Week-end course in diseases of the ear, nose, and throat, at Metropolitan Ear, Nose, and Throat Hospital, all day, Saturday and Sunday, Dec. 8 and 9. (4) Week-end course in gynaecology, at South London Hospital for Women, all day, Saturday and Sunday, Dec. 15 and 16. (5) Primary F.R.C.S. course, three evenings weekly, 6 p.m. to 8.15 p.m., from Jan. 28 to April 1, 1946. Full particulars of courses from the Fellowship of Medicine, 1, Wimpole Street, W.

DIARY OF SOCIETIES AND LECTURES

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—*Mon.*, 5 p.m., Mr. J. B. Oldham: Surgery of the Biliary System. *Wed.*, 5 p.m., Mr. L. Colledge: Cancer of the Larynx. *Thurs.*, 5 p.m., Prof. Hugh Cairns: Head Injuries.

ROYAL SOCIETY OF MEDICINE.—*Fri.*, 3.45 p.m., Section of Disease in Children; 3 p.m., Section of Epidemiology and State Medicine.

ROYAL COLLEGE OF OBSTETRICIANS AND GYNAECOLOGISTS, 58, Queen Anne Street, W.—*Fri.*, 5 p.m., William Blair-Bell Memorial Lecture by Prof. Leonard G. Parsons: Antenatal Paediatrics.

ROYAL INSTITUTE OF PUBLIC HEALTH AND HYGIENE, 28, Portland Place, W.—*Wed.*, 3.30 p.m., Mr. J. C. Ainsworth-Davis: Urology—Some Common Symptoms and their Significance.

ROYAL MEDICAL SOCIETY OF EDINBURGH, 7, Melbourne Place, Edinburgh.—*Fri.*, Col. Walter Elliot: Medicine and the State.

BIRTHS, MARRIAGES, AND DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words or less. Extra words* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTHS

APPLEYARD.—On Nov. 2, 1945, at The Willows Nursing Home, Bramley, Leeds, to Jeanne, wife of Bernard Appleyard, Fl/Lieut. R.A.F., a daughter.

KELLY.—On Nov. 4, 1945, at Cowes, to Ella, wife of W. P. Kelly, L.R.C.P.&S.Ed., a daughter—Patricia Mary.

PATTON.—On Nov. 4, 1945, at West Middlesex Hospital, to Peggy, wife of Dr. Geoffrey Patton, a son.

MARRIAGE

ZAKI—HOPE.—On Nov. 10, 1945, at Old Parish Church, Portobello, Dr. Y. E. Zaki to Irene Hope.

The chairman and members of the North Northumberland Local Medical War Committee gave a dinner on Sept. 20 to those doctors in the Division who had returned from service with the Forces—including Lieut.-Cols. J. C. MacKay, *M.C.*, W. R. Sprunt, and R. Armstrong, and Major A. J. Gray Newton. Mr. J. B. Hannay, who had been officer in charge of the bureau during the war, was also a guest. Seventeen members and friends were present, and toasts were proposed to the guests and chairman, to which Lieut.-Col. MacKay, Mr. Hannay, and Dr. V. E. Badcock, *M.C.*, the chairman, made suitable replies.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY NOVEMBER 24 1945

ANNUAL CONFERENCE OF LOCAL MEDICAL AND PANEL COMMITTEES

DEBATE ON FUTURE OF MEDICAL SERVICES: LETTER FROM MINISTER OF HEALTH ON NEGOTIATIONS

The Annual Conference of Local Medical and Panel Committees was held at the B.M.A. House, London, on Thursday, Nov. 15. The chair was taken by Dr. J. A. BROWN (Birmingham), who in the course of the day was unanimously elected chairman for a further year. The main document before the Conference was the annual report of the Insurance Acts Committee, which was published in the *Supplement* of Oct. 13. It was presented to the meeting by Dr. E. A. Gregg, chairman of the Committee.

ANNUAL REPORT OF INSURANCE ACTS COMMITTEE

The Capitation Fee

A motion by Bristol, moved from the chair in the absence of the representative, complained that the Minister of Health had not publicly reaffirmed the intention of his predecessors to inquire into the capitation fee after the war, "from the ground up," and instructed the I.A.C. to request him to do so. Dr. GREGG said that the committee had previously asked for the question of the capitation fee to be raised on the widest possible basis, and as a response there had come into being the Spens Committee, which included in its reference standards of remuneration for all publicly remunerated general practitioner services. What Bristol was asking for was actually in operation, and the Spens Committee had shown itself very willing to take evidence from them.

The Bristol motion was withdrawn, but a motion by Cumberland was carried without dissent, expressing the opinion that the time was ripe for a substantial increase in the capitation fee, which was long overdue.

The Government Proposals

The discussion on "The Future of Medical Services" was initiated by two motions from Hampshire, the first of which asked the Conference to reaffirm that a resolution of the Annual Representative Meeting in December, 1944, had laid down the right mode of approach to a National Health Service, and to request the I.A.C. to urge the adoption of this method. The resolution in question was the one which proclaimed that health legislation should proceed by evolution, that the National Health Insurance service should first be completed by making it embrace institutional, specialist, and all auxiliary services, and then be extended to dependants and others of similar economic status.

Dr. GREGG said that this was simply a reaffirming resolution. What the Annual Representative Meeting had laid down was precisely what they had been saying to the Ministry, and he saw no reason for these continual reaffirmations. It was agreed to pass to the next business, which was the second of the Hampshire motions, declaring that another Annual Representative Meeting resolution afforded a valuable safeguard against possible misrepresentation of the profession—namely, the resolution calling for a separate Bill to implement the National Health Service proposals instead of making the proposals a part of the financial provisions of the social insurance measure. This was carried.

Fourteen Points

Dr. GORDON WARD (Kent) moved:

That in the opinion of the Conference a National Health Service satisfactory for both the patients and the doctors can only be established if the following safeguards are ensured:

1. Free choice of doctor by patient and of patient by doctor shall be maintained to the utmost possible extent.
2. All questions as to what treatment (for prevention, cure, or rehabilitation) is best for individual patients or for particular classes of patients shall be decided only by medical practitioners.
3. The practitioner attending shall be the responsible arbiter of the treatment necessary for the individual patient, including type and place of treatment.
4. Questions of health policy, whether regional or local, shall not be determined without the concurrence of advisory medical committees, subject to appeal by either party to any dispute to the Minister of Health.
5. All administrative medical officers directly concerned with general practice must themselves have had not less than ten years' experience as general practitioners.
6. Contracts between general practitioners and the State shall be made with the Minister of Health, with whom also all questions of appointment, promotion, pay, and pension shall be agreed.
7. All general practitioners shall have reasonable security of tenure.
8. The right of private practice shall be retained for all practitioners.
9. Service under the National Health Insurance Act shall count towards pension, etc., in any new service.
10. After retirement doctors to have the right to undertake remunerative work without loss or reduction of pension.
11. Sick leave on full pay shall be allowed for an agreed period and a locumtenent shall be provided by the State.
12. All practitioners of British nationality on the *Medical Register* on the appointed day shall have a right of entry into the service, and also all such practitioners subsequently admitted to the *Register*.
13. There shall be secured to aggrieved patients and aggrieved doctors a statutory right to have any complaint fully investigated.
14. Practitioners adjudged to be guilty of faults incurring removal from the *Medical Register* shall have full right of appeal to the Courts.

Dr. Ward said that the Conference was more representative of general practitioners than any other body in the Kingdom, and it was meeting in the face of an obvious and considerable threat with no policy at all unless it was the policy of evolution which the Conference had just failed to reaffirm. State control was coming, but were there not certain measures on which they could agree and which would apply to any system—measures for safeguarding what might be called the decencies of practice? In Kent they had tried to provide some sort of policy on which the Conference might agree. While they might not be able to make themselves heard on general policy by a Government which had recently received a mandate from the country, surely they would be heard on terms of service. They would have to get down to "brass tacks," to such relatively small matters, for instance, as whether the administrative medical officers of the service should be drawn from general practitioners.

Dr. F. C. COZENS (Kent) said that the main thing for the Conference to do was to unite. If they could not dig their heels in and unite against what might possibly be the hard terms of a national service they would regret it for the rest of their professional lives. Surely there could not be a division of opinion as to the least possible things they should accept. Dr. J. H. BENNETT (Kent) also spoke in support of the motion. Dr. J. A. IRELAND (Shrewsbury) believed that there was not going to be any further contact of the profession with the Minister. Negotiations of the "Willink type" would not take place, and such negotiations were the only ones capable of any fruitful outlook so far as they were concerned.

Dr. S. **Wand** (Birmingham) said that most of them would be in agreement with the majority of the principles set out in the Kent resolution, but it would require a Representative Meeting to discuss them fully. He suggested that the general principles be accepted and that the motion be passed to the Negotiating Committee for more intimate discussion. Dr. **Ireland** seconded.

Dr. **Gordon Ward** asked whether it was suggested by Dr. Wand that the Conference was not a fit body to debate these subjects. ("No.") What was the Negotiating Committee? Was it negotiating? Was it doing anything at all? The Negotiating Committee had in the past done controversial things on which that body of insurance practitioners had had no opportunity of expressing an opinion.

Dr. H. **Guy Dain** (Chairman of Council) said that it was important that the Conference should show to the public a united front on the negotiation of a health service. Dr. Gordon Ward had done a great disservice by endeavouring to discount the value and importance of the Negotiating Committee. The body appointed by the profession should have the support of the Conference. They had all had an opportunity of seeing the results of the negotiations with Mr. Willink, and in view of this, and with a new Government in power having perhaps entirely different ideas, it was a stab in the back for medical negotiation to get up at this time of day and say that the Negotiating Committee was not to be trusted. Some of them saw the Minister last week, and he said he was looking forward to having a talk with representatives of the profession. It was important to strengthen the hands of those representatives.

Dr. **Gregg** said that there was running through this series of resolutions by Kent a distinct implication of acceptance of a whole-time State salaried medical service. Dr. Ward had appealed for unity. Let them keep on that note and have unity, and not spend their time criticizing those who had been placed in the position of negotiators. The Insurance Acts Committee was represented on the Negotiating Committee, but he would remind the representatives that neither the I.A.C. nor the Conference was an independent entity. On the Council of the B.M.A. he had never heard any other desire expressed than that the views of insurance practitioners on all questions affecting them should be fully heard. People talked about avoiding division when they were doing much to create it. It was not to be expected that the Negotiating Committee should come back and report to its various constituent bodies every iota in the negotiations as they proceeded. If representatives did not trust the members of the Negotiating Committee let them say so, let them name the members they did not trust, and put in some whom they did, and stick to them. It was up to them all to see that they did have some negotiations with the Minister before the Bill was introduced. It was their business to set forth three, four, five—not too many—points on which they were prepared to stand. "But don't go round the corner providing ammunition for our opponents and enabling them to say that there are divisions amongst us. (Applause.)

Dr. F. C. **Cozens** protested that those who had put forward the motion by Kent had faith in the Negotiating Committee, and the motion was designed to strengthen its hands. Dr. A. M. **McMaster** (Rochdale) said that at every Conference they passed a number of resolutions, all of which had to be referred to someone, and the only adequate body to deal with this resolution was the Negotiating Committee.

Dr. A. **Campbell** (Accrington) said that Dr. Gregg had stated that everything was reported to them. But two years ago the Conference voted that the Insurance Acts Committee be allowed three representatives on the Negotiating Committee; that was accepted by the Council, the three were appointed, and the negotiations took place, but there was not a single report to the I.A.C. If the Conference passed the Kent motion—he was not saying that he was in favour of it—he advised them not to pass it on to the Negotiating Committee. Dr. J. T. **McCutcheon** (Glasgow) said that he was most distressed as a young practitioner at the signs of disunity which were developing. How could they expect unity in the profession outside if there was unity in the Panel Conference? He urged the Conference ress its faith in the Negotiating Committee and show an to their colleagues.

Wand said that he bowed to no man in standing up hts of free speech, but he asked the Conference to do nothing at this stage which would embarrass the Negotiating Committee. How many Panel Committees had had an opportunity of discussing these proposals in the full way in which they should be discussed? There was much in the Kent resolution with which they were all heartily in concurrence; there were other things in it which they would not "touch with a barge pole."

The proposal to refer it to the Negotiating Committee was carried by a very large majority.

A State of Uncertainty

Dr. N. E. **Waterfield** (Surrey) moved a resolution expressing concern that the Minister of Health had given no indication that he proposed to enter into negotiations with the medical profession before introducing his new Health Services Bill into Parliament, and calling on the Negotiating Committee to take whatever steps might be necessary:

(1) To state in the light of decisions reached by the profession what are the conditions of service the profession consider vital before they will agree to serve;

(2) to approach the Minister and ask if he is willing to negotiate;

(3) concurrently to prepare plans for providing for the medical needs of the nation should negotiation be refused or have an unsatisfactory result.

Some of those who were at the Council meeting and met the Minister informally were very much disquieted. They were not at all sure that the Minister was intending to negotiate, although no doubt he would tell them his plans. There was every chance that he would present them with a *fait accompli.* It was for the profession to bring their views before him and to express their determination not to agree to serve unless the scheme accorded with certain principles.

Dr. **Dain** said that since the new Government had been in office an endeavour had been made on behalf of the profession to get in contact with the Minister, but until recently this had not been successful because the Minister had been too busy with his housing programme to discuss the proposals for a medical service. They had met the Minister on private occasions, on which he had always expressed very friendly and considerate feelings towards the medical profession. But they became anxious as time went on and they saw statements that a Bill was to be introduced into Parliament early next year and further statements that the hospitals were to be nationalized. Some time ago he arranged for a meeting of the Negotiating Committee, although at that time there was no indication that they were going to be called upon to negotiate. The previous Wednesday the Minister had lunched with the members of the B.M.A. Council and said that he intended to have negotiations with the representatives of the profession, though he did not state the date on which such negotiations should begin. Some of them formed the view that possibly what he did mean was that he would talk to them on conditions of service after the Bill had been introduced. On the day following the Council meeting Dr. Hill sent a letter to the Minister, and that morning, since the Conference had started, they had received the Minister's reply.

Dr. **Hill** then read the correspondence as follows:

Letter from B.M.A. to the Minister

"Dear Mr. Bevan, November 8, 1945.

The Council of the Association has asked me to express to you its appreciation of your visit yesterday. It welcomed the promise of full discussion and negotiation with the profession on the many problems involved in the contemplated legislation on health services. It is particularly anxious that the Negotiating Committee of the profession, in which the Association, the Royal Colleges, and other medical bodies combine, shall have the opportunity of discussing with you the subjects to be dealt with in the promised legislation before the decisions are finally reached and the Bill is published. The Council knows that you will appreciate that, useful though conversations with individual members and groups of our profession may be, only the Negotiating Committee can express the collective view of the profession as a whole.

You will appreciate that the British Medical Association in its approach to the problems of medicine and medical organization does not confine itself to terms and conditions of service in the narrow interpretation of those words. It is interested in and concerned with general problems of health, as its reports on nutrition, physical education, and a wide range of other subjects indicate. It is concerned with the problems of medical organization in the wider sense, as its report on "A General Medical Service for the Nation" and the Interim Report of the Medical Planning Commission indicate. In short, it is concerned with health organization and administration in their widest sense and would wish to be consulted through the Negotiating Committee upon these subjects as well as upon terms and conditions of service.

The Council thought it would be useful to indicate to you in this way the range of the B.M.A.'s interests, the representative character of the body specifically established by the profession to represent it in discussion with the Government, and, in particular, of its desire that the representatives of the profession should be fully consulted before legislation is introduced.

Yours sincerely,
CHARLES HILL,
Secretary."

Minister's Acceptance of Negotiation

To this letter the Minister replied as follows:

"Dear Dr. Hill,

Thank you for your letter of November 8. Yes. I shall be happy to meet the Negotiating Committee before the Government finally decide what proposals they will submit to Parliament. Neither of us, I think, contemplates beginning afresh a long series of protracted negotiations. Indeed to do so would mean covering all over again ground which has been repeatedly tilled and so wasting time which we cannot now afford. But I certainly have no intention of introducing a Bill until I have given the profession the opportunity to express their views to me, and I hope that I shall be able fairly soon to invite the Negotiating Committee to meet me for this purpose.

I fully appreciate that the medical profession as represented by the Committee are concerned in the matter of the new health service, not merely with terms and conditions on which they will take part in it, but all the wider considerations, the public interest and the general technique of health services organization.

Yours sincerely,
ANEURIN BEVAN."

The reading of the letter was received with applause from the Conference. Dr. **WATERFIELD** congratulated the Chairman of Council on what had been achieved. He suggested that the motion he had just proposed should be withdrawn, but that paragraphs (1) and (3) should be referred to the Negotiating Committee, the words "should negotiation be refused" being deleted from paragraph (3).

This was agreed to.

Dr. J. A. **PRIDHAM** asked if the I.A.C. had taken any action in the event of the breakdown of negotiations. Dr. **GREGG** said that that eventuality had been considered, and some time ago a committee was set up to deal with that specific matter. The Committee had met again fairly recently and gone over the material.

Dr. **FRANK GRAY**, chairman of the committee in question, then made a private statement to the Conference.

Treatment of Invalided Service Men

Dr. **HOWIE WOOD** (Isle of Wight) moved that it should be made possible for clerks of insurance committees to obtain the medical records of demobilized Service personnel on the request of the patients' doctor and subject to the patients' permission. It was of the utmost importance to the patient that the practitioner should have ready access to the medical history, particularly in the case of those men who had been invalided from the Services. It was possible to make application for these records to the Ministry of Pensions, but men in his area had found difficulty in getting the information which was sought.

Dr. **GORDON WARD** said that if they wanted to wreck the whole system of the Ministry of Pensions they should pass this motion and let these records get loose in the hands of insurance practitioners. ("Oh.") Had they any idea of what such records were like? They represented an enormous bundle.

It was agreed to substitute the words "a précis of the medical records," and Dr. **GREGG** said that the I.A.C. would take this up again with the Ministry. If a practitioner in any part of the country had difficulty in the matter he hoped that he would communicate with headquarters.

Certification

A further motion by the Isle of Wight was accepted that in view of the long delay in obtaining alteration of the certification rules, the draft new rule, combining Rules 5 and 12, should be put into operation forthwith without waiting for the Ministry's reply to the submission of the I.A.C. (see Annual Report, paras. 19-21), which the Conference strongly supported.

Dr. J. G. F. **HOSKEN** (Gloucestershire) moved for the appointment of a subcommittee to study and amend the forms of certificate to be used in any N.H.I. practice and to impress upon the Ministry the urgency of a reduction in the number of individual forms at present existing. He said that five volumes of certificates had now been produced which the rural practitioner had to carry about with him in his rounds of the countryside. It would be an advantage to have them reduced to the original two. The wording of the certificates might also be revised. The motion was accepted, and Dr. **GREGG** asked that any practical ideas for the revision of certificates might be sent in for consideration.

The Regional Medical Service

Dr. L. H. **WILSON** (Sheffield) moved to instruct the I.A.C. again to urge on the Ministry that no reference of patients should be made by the regional or divisional medical officer to the tuberculosis officer or other specialist without previous consultation with the doctor in attendance. He said that it could not be too strongly emphasized that the function of the regional medical officer must be confined to the ascertainment of the patient's capacity for work, and not extend to advice concerning treatment.

Dr. G. W. **TAYLOR** (Leicester) proposed an amendment which extended the original motion and stated that no such reference should be made "under any circumstances."

Dr. J. T. **MCCUTCHEON** (Glasgow) said that in Scotland they could not support this proposal, because there they had an excellent Regional Medical Service and there was good co-operation between practitioners and the regional medical officers. Dr. W. **JOPE** (Lanarkshire) also asked for the exclusion of Scotland from this proposal. The Regional Medical Service was a very valuable one to the Scottish practitioner, and he had never heard a practitioner say a word against it. Dr. G. H. **SINCLAIR** (Dumfriesshire) spoke to the same effect. Dr. A. **BEAUCHAMP** (Birmingham) hoped the Conference would support the Leicester amendment. The function of the regional medical officer was to decide as to capacity or incapacity for work. The regional medical officer would have the full co-operation of the insurance practitioner.

Dr. **GREGG** said that so far as he understood the Scottish scheme it was not an integral part of the original N.H.I. organization; it was the result of an arrangement which had been agreed between the practitioners themselves and the Department of Health for Scotland. The matter set out in the present motion arose out of an altogether different set of circumstances and was related to the ordinary working of N.H.I. They had found that there was developing on the part of the Ministry a new way of doing certain things, and although the Ministry stated that it was always within its power to do them, the committee considered that it was a new departure. The regional medical officer was embarking on the field of treatment. The committee took the greatest exception to the case being taken out of the practitioner's hands by the regional medical officer, and it had succeeded in getting the Ministry to wipe out the arrangement so far as the reference by the regional medical officer to the tuberculosis officer was concerned. He was very much in sympathy with the idea of extending their efforts so that the regional medical officer should not refer a patient to any specialist without first giving the patient's own doctor an opportunity to do so, and when the committee next met the Minister this particular matter should be down for discussion. But the Leicester amendment included the words "under any circumstances," and there might be some cases in which a practitioner was remiss in carrying out his duties—the kind of case which might be on the eve of coming before the Medical Services Subcommittee. Perhaps the I.A.C. might be allowed to discuss this whole question with the Ministry.

Both the motion and the amendment were referred to the I.A.C.

New Entrants into Insurance

Dr. **HOWIE WOOD** proposed a motion which was agreed to supporting fully the recommendations of the I.A.C. as set out in para. 29 of the annual report, and recommending that Form Med. 50 be duly amended to show that the insured perso already employed. A motion by Sheffield was also agreed to, to press the Ministry to find some way by which new entrants to N.H.I. could be issued with a medical card immediately they became employed.

Dr. N. S. B. **Vinter** (Bristol) asked the Conference to agree that when the irregular removal of a name from a doctor's list was remedied during the same or the following quarter, the capitation fee for that quarter should be credited to the doctor concerned, even though the reinstatement did not take place during the statutory ten days.

Dr. A. **Beauchamp** said that in Birmingham there was an arrangement whereby when a patient had been irregularly removed from the list the insurance practitioner was credited with the capitation fee from the date of removal. If the Bristol motion were carried it would mean that the doctor would get paid from the beginning of the quarter in which the removal was noticed and not from the actual day of removal.

Dr. **Vinter** agreed to the amendment of his motion in the sense suggested by Dr. Beauchamp, and the motion was agreed to.

A motion by Sheffield calling attention to the continuance of this irregular procedure, and urging the Ministry to take action to alleviate a grievance which caused hardship to the insured person and hindered the doctor in the performance of his duties, was also carried.

Sickness Benefit and Pregnancy

Dr. W. F. **Eberlie** (Bedfordshire) moved a resolution expressing dissatisfaction with Form R.M.2 from the point of view of the pregnant woman and pointing out that it did not agree with the resolution passed by the Annual Representative Meeting that all examinations within eight weeks of the expected date of confinement should be made at the patient's home. The arrangement proposed by the Ministry would tend to disturb the patient and to upset the idea which they had been inculcating for many years that pregnancy, after all, was not in any way an illness. If, of course, the intercurrent condition was of such a nature as to prevent the pregnant woman leaving her home then the provisions of Form R.M.2 were very satisfactory.

Dr. A. **Beauchamp** opposed the amendment. He agreed that pregnancy was not an illness, but if examination was to take place he did not think it right for the pregnant woman during the last eight weeks of pregnancy to be called upon to go to a regional medical centre which in many cases was quite a distance from her home.

Dr. **Gregg** pointed out that there was all the difference in the world between the woman going to her doctor whom she knew and to whom she went regularly under circumstances suitable to herself, and having to travel a considerable distance to a place where she had not been before and seeing someone who was a complete stranger. The committee was not satisfied with the Ministry's view and would continue to press for all examinations within eight weeks of confinement to be conducted at the patient's home. Dr. J. A. **Ireland** said that he knew of patients in his town of Shrewsbury who were required to travel to Wellington, eleven miles away. It was an unreasonable thing to expect of the pregnant woman.

Dr. **Eberlie** pointed out that Form R.M.2 was a form which was under their own control; they did not like the idea of compulsion in this matter.

The Bedfordshire amendment was lost.

Dr. G. F. **Chissell** (Reading) moved a resolution urging that sickness benefit be paid for six weeks preceding the date of confinement. He said that a number of women in his area did not seem to know whether they were entitled to benefit or not. The idea of bringing this up at the Conference was to get some definite ruling.

An amendment to this was moved by Southampton:

> This this Conference considers that provision for payment should be made in the case of employed women of a weekly maternity benefit for a total of thirteen weeks on both sides of the date of confinement after the issue of the first certificate by the practitioner, h certificate, would normally be given six weeks before the ed date of confinement.

ver explained that the purpose of this was to avoid the woman within six weeks of her confinement having every week to her doctor, even when it was not him to see her clinically.

Dr. **Howie Wood** supported the amendment. He said that the Government agreed that it was a desirable thing that the woman should be paid over a total period of thirteen weeks on both sides of her confinement, but they were not prepared to bring it into operation immediately owing to a fear of embarrassing the new proposals as a whole. That was an example of the procrastination which was causing so much annoyance among insurance practitioners. If a thing was good and desirable why not simply issue a regulation and bring it into force immediately?

The Southampton amendment was agreed to by the Conference.

Post-war Financial Aid for Doctors

Dr. F. E. **Gould** (Birmingham) had a motion asking that all information relating to the new scheme for the purchase of practices should be circulated as soon as possible, and to all medical officers while they were still serving. As this information would also be of value to other doctors in practice who might not yet have completed the full purchase of their practices, or who contemplated entering into partnership, a copy of the scheme should also be sent to them.

The **Secretary** said that the office would give further publicity to the scheme. In so far as demobilized doctors were interested in the scheme there was being issued to each one a booklet entitled *The Returning Doctor*, which included the fullest details.

Dr. **Gould** said that he wanted the information circulated to doctors while they were still serving. There were doctors not yet demobilized to whom this booklet would be useful.

The motion was carried.

Treatment of Tropical Diseases in Ex-Service Men

Dr. G. F. **Chissell** (Reading), in connexion with the reference in the annual report to the facilities for the treatment of ex-Service people suffering from malaria and other tropical diseases, moved:

> "That this Conference considers that the medical report should be sent to the patient's own doctor so that treatment may be continued at home, if possible, references to hospitals being made only if necessary."

He said that in his own area it was difficult to obtain hospital accommodation. Persons returning from the Tropics were in the habit of assuming, for example, that every attack of enteritis was dysentery, and in consequence a number of patients would be sent to hospital without cause.

The motion was agreed to.

Dr. W. R. **Pratt** (Bournemouth) moved to instruct the Committee to ask the Minister to circulate a memorandum on the modern treatment of tropical diseases. He said that in 1943 a letter of advice was sent to medical officers of health regarding the provision of consultant services and laboratory investigation. Since demobilization started many of the Service personnel had been discharged from hospital during treatment and their doctors might be uncertain as to how they had been treated. A memorandum such as this would be of benefit to both patient and practitioner should future advice and treatment be required. It would probably save further reference to the still overcrowded out-patient department. The motion was carried.

This completed the motions arising out of the report of the Insurance Acts Committee, and the report was approved.

NATIONAL INSURANCE DEFENCE TRUST

Dr. J. W. **Bone** (Treasurer of the Trust) reported a gratifying increase in subscriptions from Panel Committees. The amount received from this source had increased from about £7,000 in 1943 to £12,400 in 1944, and in the current year already to £16,500. The largest cheque received from any single Panel Committee in recent months was £5,000 from County Durham. The assets of the fund, at the nominal value of the securities, were £301,000, and they were at a much higher figure than that at present prices.

MEDICAL WAR RELIEF FUND

Dr. **Dain** drew the attention of the Conference to the claims of the Medical War Relief Fund, by which it was hoped to help men coming back from the Services who found their financial affairs in a very sad condition. The appeal was made only to doctors; nobody outside the profession had been approached. Men were now being demobilized and in a position to start in practice again, but in some cases found themselves seriously handicapped for want of ready money. Requirements were increasing rapidly, and a special appeal would shortly be issued, headed, it was hoped, by a substantial list of early contributions and promises. The "target" was £100,000.

The ASSISTANT SECRETARY (Dr. Macrae) said that this was the second appeal for this fund. The first was made at the initiation of the fund five years ago, when there was plenty of time to prepare the ground. On that occasion 126 people sent early individual contributions amounting to £1,525. On this occasion, during only a fortnight, there had been 73 individual replies bringing in a total of £1,672. Already four subscriptions each of 100 guineas, and nine of 50 guineas, had been collected. There had not been much time for Panel Committees to do anything, but 15 of them had already sent or promised a total of more than £900. In addition 200 guineas had been received from the Royal College of Physicians. The total amount raised in a fortnight was £2,800. (Applause.)

MATTERS NOT REFERRED TO IN ANNUAL REPORT

Grouping of Areas for Election of I.A.C.

The Conference then turned to a number of motions from Panel Committees which dealt with matters other than those referred to in the annual report.

Dr. J. H. WARD (Lindsey) brought forward a motion urging reconsideration of the grouping of areas for election of direct representatives to the I.A.C. Lincolnshire, he said, was in Group H, which included also Leicestershire, Nottingham, and Rutland. For 25 years Lincolnshire had never succeeded in getting one of its men elected on to the Committee; it was always outnumbered by Nottingham, which meant that in effect Lincolnshire was disfranchised. This had caused considerable dissatisfaction.

Dr. J. COTTRELL (Grimsby) supported the protest, pointing out that Lincolnshire was the second largest county in England. They objected to "being misrepresented by the industrial Midlands." Dr. N. S. B. VINTER (Bristol) said that in the West Country they were in a similar difficulty. The area of his Group stretched from the borders of London to the Bristol Channel. There should be a general recasting of Groups.

Dr. GREGG sympathized, but said that when one began to tinker with the present basis of I.A.C. representation the result was only to produce inequalities elsewhere. His predecessors in the chair of the I.A.C., Sir Henry Brackenbury and Dr. Dain, had both tried their hands at it, as he in his turn had done, but without success. He was quite prepared to have the matter looked at afresh by the I.A.C. so as to arrive at a better representation of constituencies. In the meantime it would help matters if representatives of Groups on the committee would remember that they represented the whole area and not merely their own district. A little sportsmanship whereby representation might be shared in turn between different parts of the area at successive elections was also to be commended.

Dr. A. T. ROGERS (Bromley) said there should be a much greater use made of the Group Consultative Committee mechanism. This would allow the different counties and county boroughs in each Group to get together regularly.

The Lindsey motion was carried by a very large majority.

Dr. H. W. POOLER (Derbyshire) called attention to the continued disfranchisement of Derbyshire owing to the preponderant strength of Panel Committees in Cheshire (the other county included in Group F), and urged some rearrangement, preferably by the inclusion of Derbyshire in the North Midland Group. It was not a good arrangement, he said, whereby one county in a two-county group was overwhelmed by the numbers in the other county so that it had no chance of obtaining direct representation. Dr. J. KERR (Cheshire) said that it was certainly not true that Derbyshire had been permanently disfranchised. From 1929 to 1937 the representative of the Group, who served with great acceptance to the Cheshire Panel Committee, was Dr. Pooler himself.

A motion to consider the question of Derbyshire was carried.

Dr. POOLER moved that the Ministry of Health be approached with a view to securing its approval of new elections of Panel Committees at an early date. He said that it was six years since Panel Committee elections took place. There had been Parliamentary and municipal elections, but Panel Committee elections could not take place without the sanction of the Ministry. Some Panel Committees had made the approach on their own initiative, but he thought this was a matter which should be carried out by the I.A.C.

Dr. GREGG promised that the necessary inquiries would be made so as to make it possible for elections to be held.

Mass Miniature Radiography

Dr. H. SUNDERLAND (Bradford) moved that in cases where a patient was examined by mass miniature radiography and abnormal findings were discovered it should be the practice for these findings to be communicated to the patient's own doctor, through whom further investigation should be arranged to establish a diagnosis. He said that no one could disapprove of a method of examination which conferred such benefit, but the question was what was to be done with the cases in which something abnormal was discovered at the first examination. His committee had been rather concerned lest such cases drifted into the clinics for further examination and were not referred to the patients' own doctors. The method of mass miniature radiography was revolutionary because it introduced the practice carried out by the public health authorities in which diagnosis of disease was made in its early stages. This hitherto had been regarded as the chief concern of the private practitioner, and if this practice by the public health authority was not checked and cases which showed abnormalities were referred to the chest clinics instead of to the private doctor, the latter position was going to be sidetracked. He drew attention to an article in the *British Medical Journal* of Oct. 27 concerning mass miniature radiography of factory groups in Middlesex, in which it was stated: "There were a further 36 who, having had a large film and on interview being recommended to attend a chest clinic, failed to do so." It seemed quite obvious that the practice was to refer to a chest clinic those cases in which abnormalities were discovered.

Dr. W. D. STEEL (Worcester) pointed out that it would be helpful to have the normal as well as the abnormal findings communicated to the patient's doctor, and he moved that the resolution read as follows:

> That in cases where a patient is examined by mass miniature radiography it should be the practice for the findings to be communicated to the patient's own doctor, through whom further investigation, if necessary, should be arranged to establish a diagnosis.

In this form the motion was agreed to.

Assistance for Returning Practitioners

Dr. H. C. BOYDE (West Ham) moved:

> That this Conference recognizes that many practitioners discharged from service with H.M. Forces will return to "panel lists" which are seriously depleted, particularly because of their inability to undertake new acceptances during their absence. It endorses in principle the efforts of those Panel Committees which are trying to provide some compensation for these practitioners by appropriate adjustments of their Distribution and Allocation Schemes, but believes this should be done on a national scale. It instructs the Insurance Acts Committee to examine with all possible speed the possibilities of taking such action, and to issue guidance thereon to Local Medical and Panel Committees.

Dr. Boyde said that the first sentence was simply a statement of fact. In the view of his committee it was not enough to recognize the fact, but everything possible must be done to remedy the position and to make up to their absentee colleagues something of what they had lost. This in fact linked up very closely with Dr. Dain's appeal for the Medical War Relief Fund. There was no suggestion of a hard-and-fast scheme. It was desired only to ventilate the question and obtain agreement on the principle if possible. The problem of recompensing their absentee colleagues for loss of insurance practice was relatively easy in those areas where "pegging" had taken place, and in such areas an admirable lead had been given by the Essex Panel Committee. He understood that in Essex this would cost between 1% and 2% of the total pool. The acting practitioners who had not been away would subscribe in effect a sum of money for the support of those who had. The problem was not so easy in relation to an area like West Ham. There the lists of men who had been away on service since the days of the war had fallen by 75%. His colleagues were anxious to follow the lead of Essex to some degree and to subsidize these men who were returning, but another interesting fact was that the lists of the acting practitioners who did not themselves go on service had also almost uniformly dropped by some 45%. It was therefore a little difficult to ask men who had already lost considerably themselves to subsidize their colleagues. In the case of West Ham this would cost, not 1% to 2% as in Essex, but about 14% of the total pool. This matter should be tackled on the national scale.

Dr. I. G. **Innes** (Hull) said that it seemed unfair that the acting practitioners whose lists were very much diminished should bear the whole brunt of this obligation. In Hull, owing to bombing attacks and other causes, the population diminished from 315,000 to 180,000 at one time, and the lists of practitioners accordingly suffered heavily.

Dr. R. A. **Woodhouse** (Essex) supported the West Ham motion. Essex, he said, had formulated a scheme which it was proposed to put in operation on Jan. 1 next. The proposals had been circulated to all the doctors in the county, and out of 800 there had been only two dissentient voices. This was regarded as a gesture to their returning colleagues. The amount required would in no instance be more than £25 and in most instances very much less than that. It would be made retrospective from Jan. 1, 1945, and so would cover men lately demobilized.

Dr. D. F. **Hutchinson** (Middlesex) speaking as one of the returned practitioners, said that in Middlesex they had not had any scheme of "pegging." He foresaw many practical difficulties in the West Ham motion. In actual fact it seemed to him asking rather too much of their colleagues who had undoubtedly borne the heat and burden of general practice during the absence of others on service to expect them to make a substantial addition to the incomes of these absentee practitioners on their return. The resolution showed the most excellent feeling, but he thought it hardly practical politics.

Dr. G. **de Swiet** (London) was in whole-hearted agreement with West Ham, but he desired to put in a word for London practitioners. As a member of the London Protection of Practices Committee he had studied a good many cases of practice of absent doctors, but now and then he had come across the cases of those who did not absent themselves from their practices, and some of these were harder cases than the others. He had in mind one case in which such a doctor had lost 90% of his panel practice. There would have to be some adjustment between reception and evacuation areas, and London was notoriously an evacuation area. It would be necessary to have a give-and-take between these two kinds of areas; up to now there had been only "give" so far as London was concerned.

Dr. S. F. **Fouracre** (East Riding) said that in Hull and in his area they were prepared to go on with this scheme locally if necessary, but to do that they would have to alter the allocation scheme for the district and get the acceptance of all the panel practitioners in the area. He wanted this resolution to go through, but it should be carried out on a national scale. Further, the question should be examined by the I.A.C. with all possible speed because the matter was urgent.

Dr. G. H. **Sinclair** (Dumfriesshire) said that Scotland was ready to give this scheme its support. A meeting was held recently in Edinburgh attended by representatives of the Department of Health and of Panel and Insurance Committees, and it was stated by the Department that if the Essex scheme were put into effect on agreement of a majority of the doctors in the area, all the doctors in that area would be bound to fall in. The support of Scotland was also voiced by Dr. C. W. **Somerville** (Midlothian).

Dr. A. M. **McMaster** (Rochdale) thought that a local scheme was not enough. In his area, to recompense the returning practitioners a levy of 1½d. per insured person would be required, but a London representative had told him that day that in London the levy would have to be about 2s. ("No.") The I.A.C. should decide on a levy for all areas. Dr. F. C. **uzens** (Kent) pointed out that circumstances during the war so bad in the coast towns of Kent that men had to appeal Ministry to be included in the E.M.S. if they were to live In fact, the absentee practitioner was doing very much the practitioner who was at home. He felt that if helping the returning practitioner was to take any m it should be on a national basis. Local areas could not find an equitable figure. It was only by spreading such a figure over the whole nation that the practitioner who remained at home could meet the obligation adequately. He doubted very much if they would be in a position to stand a levy such as West Ham had suggested.

The **Chairman** said that the Essex representative desired to make it clear that Essex would go forward with its own scheme, but that if anything on a national basis was arrived at it would let its scheme go and come in on the national footing. Dr. H. C. **Boyde** said that what they were endeavouring to do in an organized fashion through N.H.I. funds was the same thing as they were endeavouring to carry out on the private side by means of the Medical War Relief Fund.

The West Ham motion was carried with two dissentients.

Demobilization of Practitioners

Lieut.-Col. A. H. D. **Smith** (Carmarthenshire) moved that, with a view to expediting the demobilization of medical personnel from the Forces, the I.A.C. be asked to press for representation on the Central Medical War Committee of medical men who had held commissions in territorial or temporary mobilized forces since September, 1939. He said that this was no reflection on the excellent work done by the Central Medical War Committee, but an entirely different state of affairs existed to-day, calling for a new outlook. The officers mentioned in the motion would know better than anybody else the exact state of affairs both in civilian practice and in Service life. A number of officers who had held such commissions for six years were now returning.

The **Chairman** said that this matter was already being taken in hand and would no doubt be implemented at the next meeting of the Central Medical War Committee.

The motion was carried.

Dr. B. **Hutchison** (Lanarkshire) moved:

> That immediate steps should be taken by the Government in the interests of the insured population to accelerate the demobilization of medical practitioners from H.M. Forces.

His committee had been seriously concerned by the very slow demobilization of medical practitioners. At the beginning of the war practically all the junior men in his area who were acting as assistants were called up, but that was not sufficient to fill the quota, and many of the younger men in practice in the county were also called up. This led to a heavy burden on the older doctors left. During the last six years the numbers had been further depleted by death or retirement, and in his own area 17 practices had fallen vacant and the work had had to be shared out. On the other hand many doctors still in the Forces were doing nothing. He was informed of one Service hospital of 1,200 beds, fully staffed, in which there were fewer than 500 patients, and very few of those were seriously ill. It was time to demand some relief for the men in civilian practice.

On the motion of Dr. J. A. **Ireland** (Shrewsbury) the motion was extended to include medical students in Class B, and in this form it was carried.

Other Motions

A motion from Glasgow, that the continued toleration of unscientific and untruthful advertising of proprietary medicines is an evil inimical to medical progress and the best interests of the public, was carried without discussion.

A motion by Swansea urging that the time was ripe for the removal of the purchase tax from doctor's prescriptions, drugs ordered in bulk for dispensing, and surgical instruments, was also carried, and was extended to include doctors' cars.

Dr. J. **Ward** (East Sussex) moved a resolution deploring the prejudice against insurance practitioners who had the necessary experience and qualifications in connexion with obtaining hospital appointments for major specialties, and he cited a particular case. Dr. C. M. **Stevenson** (Cambridge) said that formerly in his town there was a prejudice created against hospital consultants doing general practitioner work, but an agreement was arrived at with the consulting staff of the hospital that they would entirely give up general practice work, and that agreement had been in existence for fifteen or twenty years and worked perfectly satisfactorily on both sides.

The motion was carried.

Dr. H. R. **Cran** (Surrey) moved:

> That this Conference is of opinion that persons discharged from the Services should not be supplied with medical cards until they have entered or re-entered insurable occupations.

He said that there were two main groups of people coming out of the Services. One group consisted of those who had been insured before they joined the Service, and during their time of service they had had a certain amount a week deducted from their pay. Some of these people were coming out after six years during which they had not contributed a penny to medical benefit, but they were given a medical card and were entitled to eighteen months' free medical attention although they might or might not enter insurable employment. Then there were the persons who had never been insured. They also were presented with a medical card entitling them to eighteen months' free medical attendance. Some of these cards were presented quite irrespective of the income limit of the person concerned. Dr. Cran exhibited a card which had been given to him by a member of the Stock Exchange, a broker in a large way of business, who was a major recently discharged, and whose income, of course, was above insurance limits. He had not paid for medical benefit, nor had anything been paid on his behalf, and yet he was entitled to such benefit free for eighteen months.

Dr. **Gregg** said that he felt that the Ministry ought to be asked for some definite information on this subject, and he promised that it should be taken up with the Ministry at an early date.

The motion was carried in the form of a reference to the Committee.

Closing Proceedings

Dr. J. A. Brown was unanimously re-elected chairman of the Conference. A ballot was taken for the election of six members of the Insurance Acts Committee by the general body of the Conference. The six so elected were: Dr. A. Beauchamp (Birmingham), Dr. I. D. Innes (Hull), Dr. J. A. Ireland (Shrewsbury), Dr. J. A. Pridham (Weymouth), Dr. F. M. Rose (Preston), Dr. N. E. Waterfield (Surrey).

Dr. D. G. Greenfield was re-elected as the representative of the Conference to serve on the Conjoint Committee of Epsom College.

Dr. N. E. **Waterfield** obtained permission to move the following as an emergency resolution:

> This Conference recommends the Negotiating Committee in their negotiation with the Minister to express the view that the medical profession is not prepared to accept a full-time salaried service; that in any body or bodies set up to administer the service the medical profession should be adequately represented; that there should be no "direction" of medical personnel; that the patient should have the right to decide whether he should receive his treatment under the scheme or by private arrangement; and that the doctor should be entitled to treat patients either under the scheme or privately according to the wish of the patient.

He said that these were founded on decisions reached at various representative conferences, and he thought they crystallized what the medical profession, or the majority of it, desired.

Dr. **Dain** said that the principles put forward in this resolution were among those which had been established at various meetings of the medical profession, both the Representative Meeting and the Panel Conference. There was nothing new in any of them. But they had been put together very quickly, and while he had nothing to say in opposition to any of them, they were not all of equal importance and were not necessarily set out in the best language to establish them. The Negotiating Committee was to meet in the following week to lay down the principles which would be placed before the Minister, and he hoped that, while the Conference might approve everything in the resolution, it would not at that stage of the proceedings, when it was placed before them without any warning and without any opportunity of consulting their constituents, pass it as a binding resolution. He wanted everything done properly and with proper thought.

On the motion of Dr. H. W. **Pooler** it was agreed by the necessary (two-thirds) majority to pass to the next business.

On the proposition of the chairman, the Conference sent a message of sympathy to Dr. L. J. Picton in his illness.

The Conference concluded at 4.30 p.m.

Correspondence

Sickness Benefit and Pregnancy

Sir,—For several years I have been very much troubled over this question, and the position seems further complicated by the paragraph in the report of the Insurance Acts Committee (Oct. 13, p. 83). We have an official memo. 324 A.I.C. (which I have tried to obey against strong pressure from insurance agents and patients), and this forbids us to give certificates of incapacity to women in normal uncomplicated pregnancy, with the vague proviso that it *might* be done in exceptional circumstances. Now we have the Ministry suggesting that we should disobey its instructions, and, as I understand it, give certificates to *all* women in the last two months. The situation is ridiculous.

We also remember that the Ministry in the past has demanded complete obedience to the last letter of its certification rules (nearly all the work of the medical service subcommittee is on this subject), and now we are invited to ignore the Ministry's explicit instructions, which are not modified or withdrawn in any way. Our only warrant for this is to be a report of an interview or correspondence published in an unofficial journal with no guarantee that it is accepted by the officials or will be the basis of their future action. Can we quote this report before a medical service subcommittee and must they accept it as authoritative?

Surely the simple way out is for the Minister to put his pride in his pocket and withdraw his memo., and let the question of incapacity be decided on medical grounds and not on insufficiency of funds.—I am, etc.,

King's Langley. **Reginald Fisher.**

Local Medical War Committees

Sir,—In the *Supplement* of Oct. 13 (p. 84), under the heading "Heard at Headquarters," reference is made to criticism of Local Medical War Committees in exercising what is described as their little brief authority. Before any Local Medical War Committee feels that, as amateur administrators, they have been unjustly criticized in carrying out what is apparently only an improvised procedure, an opportunity of considering the original context of the expression "a little brief authority" may prove salutary. It may also remind them that membership of a Local Medical War Committee does not confer any immunity from the same human errors such as are attributed in your columns to some critics. I therefore take the liberty of bringing the original context to their notice:

"... but man, proud man!
Drest in a little brief authority;
Most ignorant of what he's most assur'd,
His glassy essence,—like an angry ape,
Plays such fantastic tricks before high Heaven,
As make the angels weep."

Measure for Measure, Act II, Scene 2.

—I am, etc.,

Bournemouth. **Thomas Robson.**

Regulations which restrict the use of the title "nurse" and govern the licensing and control of agencies for the supply of nurses came into operation on Oct. 15. They have been made by the Minister of Health and the Secretary of State for Scotland under the Nurses Acts, 1943. It will now be an offence for persons to use the title "nurse" unless they are State-registered nurses or enrolled assistant nurses. The Acts make an exception, however, in favour of children's nurses, and by the regulations titles such as "trained nurse," "maternity nurse," "student nurse," "pupil assistant nurse," and others can be used by certain classes. Agencies for the supply of nurses—often called "nurses' co-operations"—must be licensed by local authorities and supply only State-registered nurses, enrolled assistant nurses, midwives, or members of other classes allowed by the regulations. The main objects of these provisions are to secure that only persons possessing some nursing qualification shall describe themselves as nurses, and to safeguard the public against the risk of being supplied without their knowledge with the servi of unqualified persons, possibly at high fees.

SERVICE M.O.s OF QUEEN'S UNIVERSITY, BELFAST

The Northern Ireland Government has made a grant to Queen's University to enable a scheme for demobilized medical officers to be evolved similar to that in Great Britain. Under this scheme graduates who joined the Forces within a year or so of qualification (Class I) will be appointed house physicians or surgeons for a period of 6 months in a teaching hospital. Remuneration will be at the rate of £350 per annum if resident, £450 if non-resident.

For those practitioners who on recruitment were being trained to become specialists or consultants a number of posts of registrar status will be available. The salaries for these posts will be of the order of £550 a year plus board and lodging, or £100 in lieu thereof. Facilities for refresher courses will also be made available for general practitioners if so desired.

All applications concerning these appointments should be made to Prof. J. Henry Biggart, Dean of the Medical Faculty, Queen's University, Belfast.

RELEASE FROM THE R.A.F.

The Central Medical War Committee has been informed of a further acceleration of the rate of release of R.A.F. medical officers. In addition to age-service groups 21 and 22, groups 23, 24, and 25 will be released during December, 1945.

LOAN OF LIBRARY BOOKS OVER-SEAS

The Council of the British Medical Association has decided to extend the facilities for borrowing books from the Library to members serving with Occupation Forces, and other official organizations, in the Continent of Europe. This is an experiment, and its continuance will depend upon the various factors applicable to conditions prevailing on the Continent in so far as loss of and damage to books are concerned. The ordinary rules as to the borrowing of books will apply, with an extension for time taken in transit. No deposit will be required. Applications for books should be made to the Librarian at B.M.A. House, Tavistock Square, London, W.C.1.

MEDICAL WAR RELIEF FUND

SEVENTY-SECOND LIST

Amount previously acknowledged £58,397 19s. 9d. *and* £100 3½% *Conversion Stock and* £40 3% *Defence Bonds*

Individual Subscriptions

£5 5s.—Dr. J. G. Thwaites, Brighton.
£2 2s.—Major W. Happer, I.M.S. (27th donation).
£1 1s.—Dr. T. B. Evans, Prestatyn (27th donation).
10s.—Capt. G. C. Tresidder, I.M.S. (3rd donation).

Local Medical and Panel Committees

£52 10s.—Carmarthenshire (4th donation).
£50.—Dorset (3rd donation).
£44 3s.—Newcastle-upon-Tyne (17th donation).
£42 16s. 7d.—County of Ayr (19th donation).
£32 17s. 11d.—Midlothian (19th donation).
£18 4s. 2d.—East Lothian (18th donation).

Total—£58,647 9s. 5d. *and* £100 3½% *Conversion Stock and* £40 3% *Defence Bonds*

Sums for Books for Prisoners of War

Amount previously acknowledged, £216 14s. 6d.

Cheques, payable to the Medical War Relief Fund, should be sent to the Hon. Treasurer of the Fund, British Medical Association House, Tavistock Square, London, W.C.1.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following ha[illegible]esumed civilian practice: Dr. J. B. Harman, F.R.C.P., at 89, [illegible]eet, W.1: Dr. R. H. Leaver, at 49, Wimpole Street, W.1; [illegible]Kim H. McCullagh, F.R.C.S., at 149, Harley Street, [illegible] J. Shortall, F.R.C.S.I., at Laurel Lodge, Downshire [illegible] Co. Down: Dr. Bernard C. Tate, F.R.C.P., at 25, [illegible] Edgbaston, Birmingham; Dr. E. A. Wood, at [illegible] Hill, St. Leonards-on-Sea.

Association Notices

SCHOLARSHIPS IN AID OF SCIENTIFIC RESEARCH

Scholarships

The Council of the British Medical Association is prepared to receive applications for research scholarships as follows: an Ernest Hart Memorial Scholarship of the value of £200 per annum, a Walter Dixon Scholarship of the value of £200 per annum, and four research scholarships, each of the value of £150 per annum. These scholarships are given to candidates whom the Science Committee of the Association recommends as qualified to undertake research in any subject (including State medicine) relating to the causation, prevention, or treatment of disease. Preference will be given, other things being equal, to members of the medical profession. The scholarships will be tenable for nine months in the first instance, commencing on Jan. 1, 1946. A scholar may be reappointed for not more than two additional terms of one year each. A scholar is not necessarily required to devote the whole of his or her time to the work of research, but may be a member of H.M. Forces, or hold a junior appointment at a university medical school or hospital, provided the duties of such appointment do not interfere with his or her work as a scholar.

Conditions of Awards: Applications

Applications for scholarships must be made not later than Saturday, Dec. 1, 1945, on the prescribed form, a copy of which will be supplied on application to the Secretary of the Association, B.M.A. House, Tavistock Square, London, W.C.1. Applicants are required to furnish the names of three referees who are competent to speak as to their capacity for the research contemplated.

Branch and Division Meetings to be Held

WAKEFIELD, PONTEFRACT, AND CASTLEFORD DIVISION.—At Clayton Hospital, Sunday, Dec. 2, 11 a.m., Mr. D. H. Russell: Defects and Deformities of the Foot.

WESTMINSTER AND HOLBORN DIVISION.—At City Hall, Charing Cross Road, W.C., Thursday, Dec. 6, 8 p.m., ordinary meeting.

POSTGRADUATE NEWS

The Fellowship of Medicine announces: (1) Week-end course in general medicine and surgery, at North Middlesex County Hospital, all day Saturday and Sunday, Dec. 1 and 2; (2) Week-end course in diseases of the ear, nose, and throat, at Metropolitan Ear, Nose, and Throat Hospital, all day Saturday and Sunday, Dec. 8 and 9; (3) Week-end course in gynaecology, at South London Hospital for Women, all day Saturday and Sunday, Dec. 15 and 16; (4) Primary F.R.C.S. course, three evenings weekly, 6 p.m. to 8.15 p.m., Jan. 28 to April 1, 1946. Full particulars of courses from the Fellowship of Medicine, 1, Wimpole Street, W.

DIARY OF SOCIETIES AND LECTURES

ROYAL COLLEGE OF SURGEONS OF ENGLAND, Lincoln's Inn Fields, W.C.—*Mon.*, 5 p.m., Air Vice-Marshal Stanford Cade: Surgery of Cancer. *Wed.*, 5 p.m., Mr. Harry Jackson: Surgery of the Spinal Cord. *Thurs.*, 5 p.m., Prof. J. Paterson Ross: Surgery of Arterial Injury and Disease.

ROYAL SOCIETY OF MEDICINE.—*Mon.*, 5 p.m., Section or Odontology. *Tues.*, 5 p.m., Section of Medicine. *Thurs.*, 8 p.m., Section of Urology.

CHADWICK TRUST.—At Westminster Hospital Medical School, Horseferry Road, S.W., *Thurs.* 2.30 p.m., Dr. A. M. H. Gray: Some Social Aspects of Industrial Dermatitis.

ROYAL INSTITUTE OF PUBLIC HEALTH AND HYGIENE, 28, Portland Place, W. *Wed.*, 3.30 p.m., Dr. W. W. Payne, Diabetes in Childhood.

BIRTHS, MARRIAGES, AND DEATHS

The charge for an insertion under this head is 10s. 6d. *for* 18 *words, or less. Extra words,* 3s. 6d. *for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.*

BIRTH

WICKES.—On Nov. 7, 1945, at the City of London Maternity Hospital, to Monica, wife of Surg. Lieut. Ian Goodson Wickes, R.N.V.R., a son.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 8 1945

HEARD AT HEADQUARTERS

In and Out of the E.M.S.—and Back Again

A London consultant recently discharged from the R.A.M.C. found the protection afforded by the Reinstatement of Civil Employment Act of 1944 highly useful in a dispute he had with the Emergency Medical Service. This is the story. At the outbreak of war he joined the E.M.S. on a whole-time basis, which, at the suggestion of the Ministry of Health, was changed to a part-time basis in December, 1939. In 1943 he joined the R.A.M.C. as a surgeon specialist with the rank of major, and when in June of this year he realized that his time for demobilization was approaching he asked to be reinstated in his last civil post—namely, that of a part-time specialist in the E.M.S. He was told that this was not possible, but that he could be employed on a sessional basis. He refused this, and said that he would apply for reinstatement under the Act referred to. Then the offer came of whole-time employment at a hospital some distance away from London, private practice being excluded. But the Major stuck to his guns and had his case presented by counsel before a Ministry of Labour Tribunal, which decided that the Ministry of Health had not complied with the Act and that he should be reinstated on a part-time contract in the London area. This seems to be a useful object-lesson for others finding themselves in a similar position.

Getting Started

About two months ago the B.M.A. decided, as an emergency measure, to supplement the normal facilities available through the medical agencies by providing an advice service for demobilized medical officers. This service came into being more or less involuntarily. On the one hand, many inquiries were being received at Headquarters from demobilized practitioners; on the other, a certain amount of information was already available, from Local Medical War Committees and other sources, of practices which were in special need of assistance. It was inevitable that the office staff should attempt to bring the two together. As a further help to the ex-Service doctor, practitioners needing help are now invited to communicate with their Local Medical War Committee in order that this information may be passed on to Headquarters. It is hoped, however, that they will not regard this action as a substitute for the usual methods of introduction.

The Expert Witness

The discussion in the General Practice Committee of the B.M.A. on the difference between the ordinary medical witness as to the fact and the expert witness who offers his opinion, and incidentally the difference in fees for the two classes of evidence (Nov. 3, p. 97), was carried a little further in Dr. Norwood East's presidential address to the Medico-Legal Society on the following day. Dr. Norwood East remarked on the curious fact that the oath administered to the expert witness is in exactly the same terms as that administered to the witness who speaks only as to facts within his knowledge. The evidence of a psychiatrist in court—as well as other special classes of medical evidence—is mostly based on the opinions the witness has formed from facts observed by himself and by others. In such circumstances to be required to tell the whole truth and nothing but the truth suggests something approaching omniscience. For the relief of tender consciences, if not for protection against possible future action, there ought to be varied forms of oath. The late Mr. Justice McCardie once made a similar observation.

Another Fine Record

A correspondent, having seen my reference in these columns a week or two ago to the long service of a Leicestershire doctor on the local insurance committee, reminds me that Dr. Robert Jackson of St. Helens, who was an original member of St. Helens Insurance Committee, is still an active member. For most of that time, too, he has been chairman of the St. Helens Local Medical and Panel Committee.

The Handbook Again

The *Annual Handbook of the B.M.A.* has made a welcome reappearance. It is dated 1945–6, and a limited number of copies have been prepared for issue to secretaries of Divisions and Branches, but there will probably be a few copies over which can be had on application to the Secretary. It is very much smaller than the *Handbook* of pre-war days, probably about three-fourths of its size in superficial dimensions, and containing fewer than half the number of pages, but that makes it suitable for slipping in the pocket. It is full of the names and addresses and figures and facts which the B.M.A. secretary or other worker wants. The historical matter has been left out, also those "more important decisions of the Representative Body," which occupied 60 pages of the old book. A brief outline is given of the constitution of the Association and the powers and composition of the Council.

Two-stage Notification

The Public Health Committee of the Association has intimated its disapproval of the proposal of the Joint Tuberculosis Council for what may be described as a two-stage procedure in the notification of tuberculosis. The idea of the Joint Tuberculosis Council is that a doctor who suspects that a patient may be tuberculous should send to the local authority a non-committal or provisional notification, instead of, as now, being compelled to decide upon a definite diagnosis of tuberculosis which would automatically place the patient on the register of tuberculous persons. If this suggestion were carried out the final diagnosis and therefore the responsibility of placing the person on the register would rest with the tuberculosis officer. This is not thought by the Public Health Committee—and in accepting the report the Council of the Association endorsed the view—to be a desirable procedure. It would mean another step in the process of attrition whereby the responsibility of the doctor is lessened, and it would create a precedent in the generally accepted principle of notification, which would be undesirable and inappropriate. If this is conceded in the case of tuberculosis, why not in diphtheria and other notifiable infectious diseases?

Hon. Secretary's "Ha'pence"

It is good to learn of another proposed revival in the B.M.A. calendar—the conference of honorary secretaries of Divisions and Branches. This conference used to be held during the week of the Annual Meeting, but the honorary secretaries have not had a chance of meeting together since "Aberdeen, 1939." It has now been decided to call a conference, presumably in London, in the spring of 1946. Meanwhile, as honorary secretaries receive "kicks" from time to time, it is only right that the "ha'pence" should be acknowledged. A letter has come our way, written to the honorary secretary of one Division by a member who is removing from the area. The member, after thanking the secretary for all his kindness, adds: "It cannot be much fun being a B.M.A. honorary secretary, but a helpful secretary makes B.M.A. membership a very live advantage."

GENERAL MEDICAL COUNCIL

The autumn session of the General Medical Council opened at Hallam Street, London, on Nov. 27, under the presidency of Sir Herbert Eason, a report of whose address appeared in last week's *Supplement* at page 121. A vote of thanks to the President for his address was adopted on the motion of Prof. Sydney Smith, seconded by Dr. J. W. Bone.

The Council, sitting *in camera*, considered a report from its Public Health Committee on the revision of the rules made under Sect. 21 of the Medical Act, 1886, as to courses of study and examinations for diplomas in public health, and also received a report from the Education and Examining Committees sitting jointly on the inspection of qualifying examinations. Still in secret session it devoted a whole day to reports on the Curriculum Committees on pre-clinical and clinical studies and on social medicine and public health. The only non-penal business taken in public was the report of the Pharmacopoeia Committee, which was of a routine nature and concerned the preparations for the next edition of the *British Pharmacopoeia.*

DISCIPLINARY BUSINESS

Cases Arising out of Convictions for Misdemeanours

The Council considered the case of Ewen Lovat Fraser, registered as of Shaftesbury Avenue, Worthing, who had been found at a previous session to have been convicted at West Sussex quarter sessions in September, 1943, of driving a motor vehicle while under the influence of drink and fined £100 and 25 guineas costs and had his licence suspended for life. The Council had postponed judgment for two years. Dr. Fraser now appeared and said that he had been a complete abstainer since this occurrence, and he produced several testimonials from medical men and others in his neighbourhood. He said that his practice was among middle-class people who expected a certain standard of treatment, and if he had failed in this respect "they would have no time for me," but in fact during the past year his practice had almost doubled. Having heard his statement and considered his testimonials the Council did not see fit to direct the Registrar to erase his name.

The case next considered—also one in which judgment had been postponed from a previous session—was that of Graham George Robertson, registered as of Mariners Lane, Tynemouth, against whom it had been found that at a court-martial held at Quetta in 1942 he had been found guilty of being drunk while on active service and had been dismissed from H.M. Service, and that in 1943 at Newcastle-upon-Tyne he had been convicted of driving a motor-car when under the influence of drink. Dr. Robertson attended, accompanied by his solicitor, who put in certain testimonials on his behalf. He said that after the hearing of his case a year ago he had worked as an assistant, to the satisfaction of his principal, who had testified for him, and had refrained from all indulgence in alcohol, but in January he started to show signs of returning depression and a tendency to take alcohol again. Thereupon he sought treatment in the Crichton Royal Institution, Dumfries, and, responding very favourably, he was eventually appointed a clinical assistant there. He had, however, a slight relapse while off duty, and became a patient again, and subsequently was transferred to Gilgal Hospital, Perth, leaving this institution after about seven weeks in order to take up an appointment in a mental hospital in England. The Council again postponed judgment for a further period of twelve months.

The Council next considered the case of Ronald Alexander Paton, registered as of Birkdale, Southport, who appeared on the charge that he had been convicted of certain misdemeanours: in 1932 at Manchester of being in charge of a motor-car while under the influence of drink; in 1939 at Liverpool of being drunk and incapable; in 1943 at Southport of being drunk and disorderly; and in 1944 at Manchester of being in charge of a motor-car while under the influence of drink. Dr. Paton appeared and was accompanied by Mr. Lester Davidson, solicitor. Mr. Davidson said that in 1943 Dr. Paton was employed as a surgeon on a ship which was torpedoed, and he was three hours in the sea before being rescued, and afterwards was detained for eight days in a prison camp for security reasons. He returned to this country suffering severely from that experience. He had insomnia and severe nervous depression, and it was then that the incident occurred which led to the conviction of being drunk and disorderly in Southport. He subsequently carried his duties on another ship for ten months with complete satis- As for the conviction of 1944 he maintained that the ere was not due to alcohol but to an overdose of insulin. iabetic subject and had at the time a very unstable blood ad now received another appointment as ship surgeon o be away for 18 months. In reply to the President, Dr. Paton stated that he started diabetes in 1938 and foolishly tried to do without insulin but eventually broke down. He then started dosing himself with insulin and took as much as 20 minims. After consideration *in camera*, the Council found the convictions proved, but in the circumstances of the case decided not to direct the Registrar to erase Dr. Paton's name.

The next case was that of John Gray Gilmour, registered as of Hyndland Road, Glasgow, against whom there were four convictions—two in Scottish courts and two in Bradford—of driving a motor-car while under the influence of drink and of being found in a state of intoxication. Mr. Hempson, who appeared on behalf of Dr. Gilmour, recited a singularly tragic story of domestic trouble. Dr. Gilmour, he said, was by no means addicted to alcohol; he was a man struggling against adversity who had weakly given way on occasion. The Council found the convictions proved, but in the circumstances decided not to direct the Registrar to erase the name

Dental Disciplinary Case

The Council considered the case of Colin Newton, registered as of Ormskirk, "Dentist, 1921," on a report from the Dental Board that his name ought to be erased from the *Register*. It had been found on inquiry that in a number of cases set out he had made false statements in dental letters issued by approved societies to their members, whereby certain small sums of money had been wrongfully obtained. Mr. Newton was ill and did not appear, but he was represented by a solicitor, who pointed out that the cases, although formidable as set out, were in reality of a trivial character. All the offences related to 1941 and 1942, and it was surely sufficient punishment that Mr. Newton should have had these charges hanging over him for so long. The Council, after private deliberation, directed the Registrar of the Dental Board to erase from the *Register* the name of Colin Newton.

The name of William Laird was restored to the *Dentists Register*

(To be concluded.)

SHORTAGE OF NURSES

SOCIALIST MEDICAL ASSOCIATION'S REMEDIES

A memorandum put out by the Socialist Medical Association claims—"unlike all the statements so far made"—to attempt to get to the root of the trouble which has resulted in a chronic shortage of nurses. The shortage arises, not from a diminished interest in nursing by young people, but from the wastage, amounting to between 50 and 60%, of recruits during training. What is the reason for this wastage? Is there some deterrent factor in the practice of nursing as presented to the nurse in training or is there some radical defect in methods of selection?

The great teaching hospitals, followed later by the local authority hospitals, have used probationer nurses as their main source of labour to the detriment of training and service. "Probationer nurses have at all times buffered the hospital machine." They have been cheap, plentiful, especially in the well-known voluntary hospitals, disciplined, and without political power. In consequence conditions of service have been poor, there has been no legal contract with right of appeal, nothing to save their labour, and often only small consideration given to their health and nutrition. "The exploitation of the nurse," says the S.M.A., "has now recoiled upon the patient."

Colleagues, not "Handmaids"

The idea of nurses and midwives as "handmaids" of the medical profession, the memorandum goes on, is out-of date. They must be regarded as professional colleagues. A careful job analysis of the work done by nurses, trained or in training, should be made. This would serve to show which duties performed by nurses can properly be described as nursing; it would also show that many services which good nurses know to be essential for the well-being of their patients are not done, often not even thought of, and in danger of becoming a lost art. It would show what services remain to be performed by persons other than nurses. Finally, such an analysis might stimulate inventiveness in hospital arrangements and administration so that the labour of the nurse was eased—the kind of inventiveness which is called forth in industry when labour becomes scarce and expensive.

As the S.M.A. sees it recruits in future will come from one of three groups: (1) girls leaving school before 18 and entering approved employment, but destined for nursing and receiving continued education; (2) girls leaving school at 18 or earlier who have done a full-time pre-nursing course; and (3) girls of 18 and older women who have not done a recognized pre-nursing course. For a long time a large proportion of entries will be from the third group, and for these candidates central preliminary training schools are suggested. The interview with the matron, which has been the traditional method of selecting probationers, in the association's view has its limitations. Certain appropriate tests should be devised.

> "The basis of good nursing is interest in other people and desire to serve, but these attributes must be accompanied by not less than average intelligence, good health, pleasant manners, and good hand-eye co-ordination."

There should also be agreement after careful research on the standard of education and the basic skills to be acquired before the candidate enters hospital.

The view is put forward that, providing nurses are relieved of non-nursing duties (which may take up 30 to 50% of the student nurse's time), a thorough basic training can be given in two years. Short intensive courses and part-time courses should be started all over the country for nurse-teachers. After the two-year period the nurse might spend six months as staff nurse under supervision before final licence to practise. Ultimately practising nurses, like practising midwives, should be required to take a compulsory, free, periodical post-certificate course. Nurses who wish to be considered for promotion to ward sister or to specialist positions should undergo periods of further training and experience.

The shortening of training would do away with the need for the "assistant nurse" category for the chronic sick; the whole nursing of the country would be done by trained nurses. The "assistant nurse" of the Nurses Act, 1943, is thought not likely to be forthcoming. "If she is good she does not care to be called by an alias, and if she is bad she has no place in nursing." The General Nursing Council is regarded as unsatisfactory, but an alternative structure is not detailed. A Central Training Council is called for to advise on nursing education.

The Immediate Programme

These are long-term proposals; certain other suggestions can be put into effect immediately. In the view of the S.M.A. nurses who are employees of hospitals should have a legal contract of service and a right to appeal against dismissal. Marriage should not be a barrier to continued employment. Salary scales should be revised, and in particular more recognition should be given to the ward sister; at present the salary gap between the matron and sister tutor and the ward sister is too wide. Superannuation payments should be interchangeable between all forms of nursing service. Hospital work should be on the basis of three eight-hour shifts; overtime should be paid for, and all instances of overtime should be the subject of inquiry by Nurses Representative Councils, which, to deal with this and other matters, should be set up in all institutions.

The health of nurses during and after training should be safeguarded, with initial medical examination and periodical re-examination, and there should be satisfactory sick-bay accommodation. The dietary of nurses should be adequate and appetizing. Trained nurses and, if suitable accommodation is arranged, nurses in training should be allowed to choose where they will live. Nurses' homes and hostels should be run by a specially selected warden assisted by a house committee of residents. In large hospitals there should be trained welfare supervisors. As for nurses in training, the student status of nurses should become the concern of the education authorities, and the rule of the General Nursing Council requiring registration of student nurses should be brought into effect immediately.

Perhaps the crux of the matter is stated in the final paragraph of the memorandum—that in the past hospitals have tried to get their nursing services as cheaply as possible.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. H. W. Applin, at 83, Park Lane, Croydon; Dr. D. Blatchley, at 2, Chatsworth Road, Chiswick, W.4.

Correspondence

Naval Medical Establishments

SIR,—In the *Supplement* of Oct. 27 (p. 95) you published a letter from "Three R.N.V.R. M.O.s" testifying to the waste of medical personnel in the Services. They give the instance of the gross over-establishments in hospital ships. Here is another instance given to me this week by an R.A.M.C. medical officer serving in a hospital ship. It has 505 beds. He assured me that if he had to do the whole work involved himself he would not have to work as hard as he did at home in private practice; that three medical officers would be ample; that four would be excessive. In that ship there are twelve medical officers.

The letter you publish casts doubt on the efficiency of the Central Medical War Committee because on it "the Services are represented only by permanent Service officers." All the work of the Central Medical War Committee is done by its subcommittee—the Services Committee—and on this committee there are no Service "representatives." There is an "observer" from each of the three Fighting Services, really more of the nature of an "assessor." Their advice has been and is most helpful to the committee, but they have no part in making its decisions.

The committee is just as alive to the urgent need for demobilization as your correspondents and has taken what steps it can to urge this in the proper quarters. It seems not unlikely that the result may shortly prove to be acceptable to the "Three R.N.V.R. M.O.s" as well as to others, but it must be remembered that the "Services Committee" as well as the Central Medical War Committee are advisory bodies only and have no executive powers.—I am, etc.,

PETER MACDONALD,
Chairman, Services Committee.

York.

*** The above letter was written by Dr. Peter Macdonald on Oct. 27, but went astray.—ED., *B.M.J.*

Praise where it is Due

SIR,—While one usually hears criticism of the Protection of Practices Scheme, I would like it placed on record that my own experience of it has been entirely satisfactory. I feel the personnel concerned in it are all to be congratulated on its being carried out so successfully, and this applies particularly to the doctors who were in the scheme, the Insurance Committee, and its Clerk. To them my thanks. From conversations from other Service M.O.s it would appear that others have been less fortunate, but I am in the happy position of having a fair nucleus once again instead of a start from absolute zero, as was the case with those returning in 1918.—I am, etc.,

B. M. JENSEN.

Prestatyn.

The Case for Private Practice

SIR,—I am surprised not to have seen any reference in your columns to Dr. J. Campbell Young's well-thought-out scheme as expressed in the article "The Case for Private Practice" (*Supplement*, Oct. 20, p. 87). It is simple, workable, and much more straightforward than any put forward by our accredited representatives. Nationalization of medical services is demanded by none but rabid Socialists, and, in my experience, what the average man wants is rather to revert to the custom of his doctor visiting him than any extension of clinics or panel surgeries. Since it is the patient who has to pay in one way or another why not give him what he wants instead of what the politicians think he ought to have?—I am, etc.,

H. G. LEYTON.

Oxford.

SIR,—I am, to say the least of it, most surprised that the admirable article by Dr. J. Campbell Young (*Supplement*, Oct. 20, p. 87), entitled "The Case for Private Practice," should have evoked no response whatever in the correspondence columns. To my mind it solves the apparently insoluble problem of reconciling the principle of 100% health insurance (accepted, as he says, by all parties) with the democ principle of an independent alternative service, usable without incurring financial disability. It certainly seems amazing that above all else the Council of the B.M.A. should apparently have ignored the article at a time when one would have imagined that every possible means would have been explored in order to find a certain method of preserving real freedom for our patients—and, incidentally, for ourselves.—I am, etc.,

Hungerford, Berks. D. H. STUART BOYD.

Local Medical War Committees

SIR,—In the *Supplement* of Nov. 24 (p. 117) Dr. Thomas Robson suggests that a consideration by Local Medical War Committees of the flustered Isabella's retort to the hard-hearted Angelo may prove salutary. Perhaps! But he might have continued to quote Isabella, who, in a calmer moment, said:

> "... authority, though it err like others,
> Hath yet a kind of medicine in itself."
>
> *Measure for Measure*, Act II, Scene 2.

—I am, etc.,

"CHAIRMAN OF ONE OF THEM."

Organization of Physiotherapists

SIR,—I have just read the letter on physiotherapists and other auxiliaries in the *Journal* of Sept. 29 (p. 444). I am much interested in some of the points raised, particularly the suggestion that the functions of the Chartered Society of Physiotherapy should be split up. The Devon and Cornwall Branch of that Society has been advocating for some time that an association of members should be formed which would deal with all social matters relating to members, while the council of the Society should continue with its functions as the examining, registering, and disciplinary body. There is already a committee known as the Branches' Central Committee, composed of a representative from each branch, which could be developed into the executive body of an association. Up to the present the majority of the council have not welcomed the suggestion of the Devon and Cornwall Branch.

A special general meeting of the Society was held recently to obtain the sanction of members to approach the Privy Council for permission to alter certain by-laws of the charter to allow of the introduction of a compulsory annual subscription. The majority of members present voted in favour, but only a very small percentage of members of the Society were present at that meeting. I should like to point out that at that meeting the chairman stated that the council holds absolute power within the charter. Members of the Society should consider whether this is altogether a satisfactory position from their point of view. With over 14,000 members scattered over the whole of the British Isles, is it possible for one body, such as the council, to deal adequately with the social as well as the academic duties entailed? We are constantly told that we appoint council, and in theory that is the case, but in practice it is quite impracticable; the majority of the members know nothing of those members nominated for council: therefore they do not vote. At this last election 900-odd votes were received out of a membership of 14,000.

An association of members could be divided into areas; each area could be responsible for the nomination of a candidate for council, who would be known to the majority of members in that area. Some form of a compulsory annual subscription would be necessary to finance the association, but the association would have the financial control of its funds.

The Devon and Cornwall Branch has put forward this suggestion of an association of members in no antagonistic spirit to our council, but with the honest desire to make the whole Society as efficient as possible and to enable every member to take a personal and an intelligent and active part in all affairs of our Society. I do urge all members to consider this matter now before a compulsory annual subscription is in force. Now [illegible]e time to form an association which would be the safe-[illegible]ggested by your correspondent, and I would ask the [illegible]rofession as a whole to support the suggestion of [illegible] and Cornwall Branch to form an Association of [illegible]siotherapists.—I am, etc.,

D. S. PALMER,
Hon. Sec., Devon and Cornwall Branch, C.S.P.

Association Notices

GROUP OF DERMATOLOGY

Notice is hereby given of the formation by the Council of a Group of Dermatology, which shall be composed of all those members of the Association who are engaged predominantly in the practice of dermatology. Members of the Association who claim to conform to this definition, including those serving with H.M. Forces, are requested to apply to the Secretary, B.M.A. House, Tavistock Square, W.C.1, not later than Jan. 31, 1946, for a form of application for membership of the Group. The first general meeting of the Group will be held at a date to be subsequently announced in the *Supplement*.

CHARLES HILL,
Dec. 1, 1945. *Secretary.*

Meetings of Branches and Divisions

KENYA BRANCH: MOMBASA DIVISION

A start has been made to carry out the decision to hold more clinical meetings which was arrived at by the Mombasa Division at its annual general meeting last February. Two clinical meetings were held on June 11 and July 18 respectively. At the former a unit of the No. 6 General Hospital showed a number of interesting medical and surgical cases and Major A. P. L. Blakely opened a discussion on "Typhus Syndrome as seen in the Mombasa Area," and Capt. H. B. Young, R.A.M.C., one on "Metatarsalgia." On July 18, after another demonstration of cases, Major B. Lowbury opened a discussion on relapsing fever and its treatment with penicillin.

SUNDERLAND DIVISION

There was a good attendance at Sunderland Division's first meeting of the 1945–6 session, which was held at the Royal Infirmary, Sunderland, on Oct. 19. A clinical demonstration by Dr. A. A. McIntosh Nicol and Messrs. Hamilton Ross and Jowett was followed by an address on some experiences as O.C. of a West African Hospital by Col. P. Hickey, T.D., late R.A.M.C.

Branch and Division Meetings to be Held

AYRSHIRE DIVISION.—At Kilmarnock Infirmary, Sunday, Dec. 16, 7 p.m., Clinical meeting.

EAST YORKSHIRE BRANCH.—At Jackson's Restaurant, Paragon Street, Hull, Wednesday, Dec. 12, 7.30 for 7.45 p.m., annual dinner.

GUILDFORD DIVISION.—At Royal Surrey County Hospital, Guildford, Friday, Dec. 7, 8.30 p.m., Dr. Bruce Williamson: Diastole, or the Economics of the Heart.

DIARY OF SOCIETIES AND LECTURES

ROYAL SOCIETY OF MEDICINE.—*Tues.*, 5.30 p.m., Section of Experimental Medicine and Therapeutics; 5.30 p.m., Section of Psychiatry. *Wed.*, 4.30 p.m., Section of Physical Medicine. *Fri.*, 5 p.m., Clinical Section.

MEDICAL SOCIETY OF LONDON, 11, Chandos Street, W.—*Mon.*, 8.30 p.m. Discussion: Present Position of Hormone Therapy in the Treatment of Cancer. To be introduced by Prof. E. C. Dodds, F.R.S., and Mr. Terence Millin.

ROYAL SOCIETY OF TROPICAL MEDICINE AND HYGIENE, 26, Portland Place, W.—*Thurs.*, 8 p.m. Presentation by Mr. J. S. Winant, U.S.A. Ambassador to Great Britain, of the Theobald Smith Gold Medal, awarded by the American Academy of Tropical Medicine, to Dr. C. M. Wenyon, F.R.S. Discussion, to be opened by Dr. Everard Napier: Teaching of Tropical Medicine. Sir Philip Manson-Bahr, Prof. R. M. Gordon, Dr. George Macdonald, and Lieut.-Cols. E. H. Vere-Hodge and W. R. M. Drew will also speak.

BIRTHS, MARRIAGES, AND DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTHS

CRUICKSHANK.—On Nov. 30, 1945, at Old Court Nursing Home, to Eileen, wife of Alexander Cruickshank, F.R.C.S., 89, Harley Street, W.1, a son.

EASTES.—On Nov. 22, 1945, at Marshfield, Glos., to Drs. Zeta and Henry J. Eastes, a daughter—Janet.

DEATH

JACQUES.—On Nov. 21, 1945, at 55, Hurlingham Court, S.W.6, Evelyn Bessie Jacques, M.B., Ch.B. (Bristol), D.T.M.&H., late Malayan Medical Service, wife of Frederick Viel Jacques, M.B., Ch.B. (Bristol), D.P.H., D.T.M.&H., Malayan Medical Service. Cremated at Mortlake on Nov. 24.

Correction

An error of identification crept into the report of the Panel Conference in the *Supplement* of Nov. 24. The speaker reported on pages 113 and 116 was Dr. F. McEwen Sinclair of Fife and not Dr. G. H. Sinclair of Dumfriesshire.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 15 1945

HEARD AT HEADQUARTERS

The Secretary's Letter

One after another pre-war customs are revived. One which has just been restored at B.M.A. House is the periodical letter from the Secretary to the chairmen and honorary secretaries of Divisions. Into the late 'twenties this was a useful method of communication; Dr. Alfred Cox was accustomed to send a monthly letter. Later Dr. Anderson felt that more was to be gained by an occasional letter, not necessarily monthly, but written when he had anything important to say. Dr. Hill has now sent out the first periodical letter of a new series. It is an informal and personal letter, not for printing or quotation, but designed to give to those responsible for Division work some up-to-date information on matters that cannot be conveyed with quite the same freedom in public print. With the letter, which is concerned with anticipations of the Government's proposals concerning the National Health Service, goes a copy of *The Returning Doctor*, a booklet prepared by Headquarters for the information of medical officers released from the Forces. I hear good opinions of this publication from many sides.

Demobilized Officers and N.H.I.

The position of demobilized officers as insured persons has been the subject of correspondence between the Ministry of Health and the B.M.A. Officers who were not entitled to medical benefit before they joined the Services are now presenting cards to insurance practitioners, and in one case an insurance committee is said to have informed a practitioner that all officers on being demobilized, whether or not they were insured before joining, are entitled to medical benefit. The Ministry now states that the position generally is that an officer is entitled to medical benefit after demobilization if he was compulsorily insured under the Insurance Acts during his service. Liability to compulsory insurance during service is determined in the following way: regular officers are not compulsorily insured; other officers—that is, officers of the reserve and auxiliary Forces and those appointed to temporary commisssions or warrants—are compulsorily insurable during their period of service if they were to any extent insured under N.H.I. or the Contributory Pensions Act on the date of joining the Service. The only exception is that officers promoted from the ranks, who were insured at the beginning of their commissioned service, can elect within two months from the date of their appointment to discontinue their insurance if they were not insured when their war service began. Therefore the statement of the insurance committee that all officers on demobilization, whether insured before joining up or not, are entitled to medical benefit is not correct.

Friendly Societies Up in Arms

The National Friendly Societies Conference in London coincided with the announcement in Parliament by the Minister of National Insurance that it was not proposed to use the Friendly Societies in the Government's insurance scheme. The first reaction in the conference was one of profound depression, but later all the societies bound themselves by a strong resolution to fight the Government on this issue. The fact that the Friendly Societies represent eight and a half million voluntarily insured members, not to speak of a similar number of State-insured persons, makes them a formidable obstacle. They talk of a nation-wide campaign, the formation of a Friendly Societies' Group of Labour Members of Parliament, fighting by-elections, and other means of preserving their existence and continuing what is now a century-old tradition. On the subject of the National Health Service the conference reaffirmed a previous resolution which laid down two fundamental principles: the preservation of the right of the individual to choose his own doctor and to change his doctor if he wants to, and the utilization of good existing facilities and experience with no unnecessary uprooting of established services.

Compulsory Health Insurance in the U.S.A.

The Washington correspondent of the *News Chronicle* reports that Bills introduced into the Senate and House of Representatives recently, following a message to Congress from President Truman, mark the beginning of fresh attempts to get compulsory health insurance accepted in the U.S.A. President Truman, in his message, asked for legislation that would in effect increase the amount of money spent by the Federal Government on hospitals and clinics, would insure workers against loss of wages when ill, and would make prepayment of medical costs compulsory "under a plan that would leave patients free to choose their own doctors and hospitals." He said that the need for health insurance was evident from the fact that Americans had been spending nearly 4% of their income to cure sickness, and from the revelation that during the war one-third of the men examined for military service had to be rejected on health grounds, while a further three million who were passed had later to be discharged. Senator Wagner, who is responsible for the Bill in the Senate, has sponsored legislation on health insurance before; he was part-author of the Wagner-Murray-Dingell Bill, which, introduced into Congress in June, 1943, aimed at extending social security law to provide medical and hospital insurance. The last we heard of that Bill, which was described in these columns on March 10 this year, was that it had aroused strong opposition and was still being discussed. That there will be opposition from the medical profession as well as from leading conservatives in Congress to the latest efforts to secure compulsory health insurance seems certain.

A Medical Family

The influence of heredity in medicine could be supported by many examples, but not often does there come to light such a medical family tradition as is recalled by the recent marriage of Dr. R. Hayden Ellis, the only son of Dr. Robert Ellis, chairman of the Cambridgeshire County Council. The *Independent Press and Chronicle* of Cambridge states that Dr. Hayden Ellis comes of a long line of doctors on both sides of his family. Those on his father's side, all connected with the Willingham and Cottenham district of Cambridgeshire, began some 150 years ago with Dr. Robert Ellis, of Willingham. After him came his nephew, Dr. R. Sage Ellis, also of Willingham, and then his son, Dr. J. W. Ellis, of Swavesey, father of the present Dr. Robert Ellis. Dr. Hayden Ellis's mother was a daughter of Dr. C. Hayden Cox, of Cottenham, and on her side of the family there have been eight uncles all practising as doctors. It would be interesting to know whether this record can be beaten.

Particular interest attaches this year to the figures for income and costs of administration of the Hospital Saving Association, especially to the fact, announced by the chairman, Sir Alan Anderson, at the recent annual meeting of the association, that there was "a record increase on a record income, without parallel in the hospital world." Income from contributions during the year was £1,491,354, an increase of £257,393 over that for the previous year. This figure reflects the increase in the rate of contribution from 3d. to 4d., which came into operation last August. Administration costs were only 4.6% of the contributions, the lowest yet recorded. Payments for hospital services were also higher, totalling £1,282,144. Some 2,250,000 people in the London area contributed voluntarily to these funds, which entitled over 4,500,000 men, women, and children to benefits.

GENERAL MEDICAL COUNCIL

DISCIPLINARY BUSINESS

Convictions for Misdemeanours (concluded)

The Council considered the case of John Corboy, registered as of Astley, Manchester, against whom there were two convictions at Salford police court, one on Jan. 5, 1945, and the other on July 10, of being in charge of a motor car when under the influence of drink. The practitioner had been fined £10 on the first conviction and £20 on the second, and on the second he had been disqualified from holding a licence for twelve months. Dr. Corboy attended and pleaded exceptionally heavy work and domestic worry. The Council postponed its judgment for one year.

The Council also considered the case of Bernard Maguire, registered as of Chorlton, Manchester, who appeared on two convictions at Manchester police court, one on Aug. 3, 1944, and the other on June 27, 1945, of being in charge of a motor car while under the influence of drink. He had been fined £15 on the first conviction and £30 on the second, and on the second he had been disqualified from holding a licence for two years. Dr. Maguire pleaded that at the time of both incidents he was under treatment at Manchester Royal Infirmary for anxiety neurosis. Now, on the return of his partner, he had been relieved of great pressure of work, and he assured the Council that the circumstances would never recur. In this case the Council postponed its judgment for two years.

Alleged Professional Relationship in Adultery

The Council considered the case of Charles Gibson Auld, now an officer in the R.A.M.C., registered as of Bromsgrove, who appeared on the charge of having committed adultery with Mabel Blakeway Adie, a married woman, of which adultery he had been found guilty by a decree of the Divorce Division in 1945 in a case in which he was the co-respondent, and of having stood in professional relationship with Mrs. Adie at all material times. The defendant was represented by Mr. Russell Vick, K.C., and Mr. A. A. Pereira. The complainant, Mr. Adie, was represented by Mr. Leslie Tucker, solicitor.

Mr. Adie in evidence said that he was married in 1938. After the outbreak of war his wife joined the V.A.D. and worked at Bromsgrove cottage hospital, where Dr. Auld was honorary medical officer. Early in 1943 his wife consulted Dr. Auld and was advised to undergo a curettage operation. This was performed by Dr. Auld in May at the hospital, where his wife was a patient in the private ward. Mr. Adie paid the hospital account, but, although he asked many times, he never received any account from Dr. Auld. After the operation his wife continued her work at the hospital, and consequently was in close association with the doctor. Until January, 1944, he had no suspicion that there was anything more than ordinary friendship between them. His wife then told him that she was in love with Dr. Auld and was going to leave her home and live with him. Dr. Auld saw him later and confirmed the statement. Various meetings took place with a view to preventing the break, and in February, 1944, his wife and Dr. Auld signed undertakings that they would not meet or communicate for six months if he on his part would not take any steps in the matter or report to the British Medical Association [meaning the General Medical Council]. He learned later that previous to the undertakings Dr. Auld and Mrs. Adie had stayed as man and wife at various hotels. Shortly before the time expired, Dr. Auld, who was going abroad, broke his undertaking not to meet Mrs. Adie. Divorce proceedings were started.

Dr. Auld in his evidence said that he first met Mrs. Adie in the summer of 1940 when she was a member of the V.A.D., but not until 1942 did they become friends—a friendship which developed into affection. From then onwards they met frequency and intimacy took place from time to time. From the end of 1942 until January, 1944, he used to call and see Mrs. Adie at her house when her husband was not there. She had never been a patient of his. Dr. Meldon, of Stourbridge, had always been her doctor. In the early months of 1943 Mrs. Adie told him she was suffering from backache and irregularity of periods. They were on intimate terms and, as was natural, she discussed her trouble with him. He took the view that as she was a voluntary worker at the cottage hospital the hospital ought to do what it could for her, and the operation was accordingly performed by him at the hospital in his capacity as honorary medical officer, his partner Dr. Rae giving the anaesthetic. After she left the hospital she was not in need of professional care and he did not prescribe for her. After Mrs. Adie and he had agreed to disclose to her husband the relations in which they stood transferred his share of his practice to his partner and volunteered rvice in the R.A.M.C. He observed his undertaking not to ommunicate with Mrs. Adie for six months until three re the expiration of that time, when he had to join a vice in Egypt and felt that he had to see Mrs. Adie broad. He spent three days of his embarkation leave wrote to the solicitors and told them of the broken ee days after the six months Mr. Adie, who, notwithstanding his undertaking, must have been seeking evidence, filed his petition for divorce, which was served on the practitioner while he was in Egypt. In January, 1945, he was in a train accident while on service and his right leg was crushed and had to be amputated below the knee. In due course he expected to be discharged from the R.A.M.C. with a pension in respect of his disability. If he were erased from the *Register* he would be dismissed from the Army and lose his pension. He repeated that he had never stood in the professional relationship of doctor and patient with Mrs. Adie except when he performed the operation in his capacity as honorary medical officer to the hospital.

In answer to questions from members of the Council Dr. Auld admitted that he did not inform Dr. Meldon about the operation or send him a report on it.

Mrs. Adie (who had lately changed her name by deed-poll to Auld and said she was now living with Dr. Auld) also gave evidence bearing out his statement. She said that, apart from the operation at the hospital, Dr. Meldon had always been her doctor and had attended her during an attack of paratyphoid in 1941, and again for some illness in January, 1944. She and Dr. Auld had talked of getting a surgeon from Birmingham to perform the operation, but she asked him to do it himself; she had seen him do it so often at the hospital, and it was such a simple thing.

Mr. Russell Vick: When you spoke to Dr. Auld about it did you think you were speaking to him as your doctor or as your lover?

The Witness: Definitely not as my doctor—as my lover.

The Council deliberated *in camera*, and the President afterwards announced its decision that the fact alleged against Dr. Auld that he had stood in professional relationship with Mrs. Adie at all material times had not been proved to the satisfaction of the Council. The complaint was therefore dismissed.

Restorations

The Council restored the following names to the *Medical Register*: Humphrey Manly Hamilton Ashwin, John Black, Patrick Joseph Conlin, Alan Gray, William Lyle Paterson, William Alexander Stevenson Welsh.

MEDICAL ASSISTANCE IN EVENT OF EPIDEMICS

In circulars which the Minister of Health has sent to local authorities suggesting measures that might be taken if infectious diseases, including influenza, should assume serious epidemic proportions this winter, reference is made to possible difficulties arising from a shortage of doctors (see *British Medical Journal*, Dec. 1, p. 778). To meet this contingency the Service Departments have agreed with the Ministry upon arrangements on the lines of those operating in the winter of 1943–4, whereby assistance may be given by medical officers of the Services to civilian doctors, though the Services may not be in a position to help to the extent which was possible on the previous occasion.

The Minister's Chief Medical Officer has communicated separately with medical officers of health on this subject, and the Central Medical War Committee has circularized local committees. Medical officers of health have been invited to take the initiative in calling a joint meeting as soon as possible with the secretary of the Local Medical War Committee and the appropriate Service Department representatives. General practitioners needing assistance would apply to the secretary of the Local Medical War Committee, and the method of payment will follow that adopted on the former occasion.

It is emphasized that, while there should be no delay in the preparation of plans, they should not be put into force until the local authorities receive a specific request from the Ministry of Health to that effect. The Central Medical War Committee will inform local committees if and when this contingency occurs. The Secretary of State for Scotland and his Chief Medical Officer have communicated in similar terms with the Scottish local health authorities and their medical officers of health.

Mr. Churchill, speaking to the Conservative Party recently, said that not a stiff enough opposition was being shown to Government Bills. He continued: "I will tell you why. It is because in many cases for some time to come the most important of those Bills are in a great measure our own Bills, like our proposed comprehensive National Health Service. . . . These were advocated and prepared in the Coalition Government, and we are determined by conviction and conscience to place upon the statute book those measures which we ourselves shaped with our superior majority in those days and put forward for the good of the British people. We do not turn from them because political fortune has been withdrawn from us. On the contrary, all those immense measures which have now to be carried through must in their principles be supported and driven forward faithfully by us who were committed to them and believe in them, and we must endeavour to see that they are not wrecked and ruined by spiteful Socialist additions and alterations put in in order simply to gain a little party prestige and exultation."

Correspondence

Demobilization of Naval M.O.s

Sir,—Upon whom does the rate of demobilization rest—with the Service chiefs or with civilians? We were told upon very high authority that the target for doctors in the Navy was Group 45 by June. This decision was apparently communicated to the C.M.W.C., but the official Naval figure is Group 35 by June. How is this discrepancy explained?

It is in fact essential that civilians should fix the rate of demobilization. We feel that this is slower than it need be by reason of the dog-in-the-manger attitude of heads of establishments who will not reduce complements although their medical officers have little to do.

Here [in the East Indies] my job in hospital takes 50 minutes daily for routine work, an extra hour or two on those days (about once weekly) when new patients arrive, and a 24-hour duty every eight days. In the local transit camp exist 20 doctors who have no duties and who form a reserve pool. Yet when reliefs are required they are obtained from England. Thus we have an apparent attempt to retain doctors both at the highest levels and again by heads of establishments. The whole cries aloud for rigorous civilian control. The Services must be told how much of our precious man-power they can retain. They must then cut their coats according to their cloth.

An excuse made locally recently for not releasing a doctor overdue for demobilization was that we must be prepared for any emergency, as, for instance, an influx of prisoners of war. As all known prison camps had been emptied weeks previously, the commanding officer concerned must have been thinking of those in Shangri-la. Perhaps his intimacy with this country was not surprising. So many senior officers have lived in "Cloud-Cuckoo Land" for so long.—I am, etc.,

"Surg. Lieut., R.N.V.R."

*** The Secretary of the Central Medical War Committee states: The C.M.W.C. understands that the rate of demobilization is decided by the Government and not by the Service authorities. The committee has received no information as to the age-service groups likely to be released from the Navy by June, 1946.

Emergency Reform of Representative Body

Sir,—Notices in the public press make it probable that before long we shall be faced with the necessity for making very grave decisions. The concluding sentence in the prefatory note to the *Supplement* of Nov. 10 seems to indicate that we shall not be given very long to make those decisions. It seems possible that we shall be presented with a complete scheme which we shall have to accept or decline *in toto,* though minor modifications in detail, not affecting the main principles, may perhaps be conceded. It is therefore most necessary that we should be able to speak as a united body with a clear understanding of the issues at stake.

The Representative Body, our mouthpiece, should have ample time and opportunity to consider the proposals from every aspect. I submit that Standing Orders for Representative Meetings are not adapted for the conduct of business in an emergency like this. Everything has to be done in plenary sessions, and these are consequently swamped by the multitude of business before them. In December, 1944, there were 472 items on the agenda, which, with roughly 21 working hours, allowed an average of 2½ minutes for each item. At subsequent meetings the congestion was as great, if not greater. When it is remembered that each proposer of a motion is allowed to speak for ten minutes and subsequent speakers for five, it is obvious that the great majority of motions could never be debated at all. This is not the way to deal with business in a grave crisis like the present. I venture to suggest that for the time being Standing Orders should be amended to allow of committees of the R.B. sitting simultaneously to deal with the majority of the business. Plenary sessions could then probably be reduced to two—an opening one for formal business and the election of committees; a closing one for the reception of the reports of committees and again formal business. This procedure, if adopted, would allow for adequate consideration of at least the greater part of the agenda.

May I, in conclusion, submit the urgency of undertaking such a reform at once, if it is to be done at all. Time is not unlimited. It is, too, from Divisions that the initiative must come. Governing bodies in being are notoriously unwilling to alter their ways unless the pressure of public opinion is unmistakable and overwhelming. If anything is to be done in the direction I have ventured to indicate it must be both, and also, in this case, immediate.—I am, etc.,

Andover. J. A. Balck-Foote.

State Medicine

Sir,—Some correspondents in your columns have suggested that we should give our whole-hearted support as a profession to the Labour Party's national health service. They are entitled to do this and they may be right. Unfortunately they base their support on arguments which not only are unsound but have been major causes in hindering the progress of mankind throughout the ages.

The first of these arguments is founded on "inevitability." It has been put forward in many forms, but basically it runs: "Our cause is bound to succeed; you have only to look at it to see that it is inevitable. You will waste both time and energy in opposing it. Far better come in with us and, though you don't like what is going on, you can at least use your powers constructively." This argument has unfortunately a great appeal. It depends for its success on the weakness of humanity and the general desire to back a winner. It fails because: (1) it takes no account of right and wrong; (2) accepting it at its own moral level—i.e., that right and wrong do not matter—it depends on human judgments of the inevitable. The Almighty is the only one who can make accurate judgments about the inevitability of human actions.

The people who use an argument do not make it true or false, but one could go through history and show how evil cause after evil cause has been supported by this argument. It was a mighty instrument in the hand of Hitler as he conquered Europe. Country after country was told that Germany's victory was inevitable, that resistance and obstruction were futile, and the peoples and their chosen leaders accepted it. Fortunately there were a few who believed in a cause however "inevitable" its failure and were prepared to obstruct this "inevitable" new order.

The second argument is: "The people have elected a Labour Government; the Labour Government believes in a national health service, therefore the medical profession should not oppose the wishes of the people by opposing a national health service. The argument is, of course, formally unsound, but that is a small thing. Assuming that it is valid, there is the basic fallacy that because the people want a thing and have chosen a Government to give it to them no section of the community should oppose it, however better informed it may be about the right and wrong of the matter in question.

I hope that few will be found in our profession who will agree with this argument. Its assumption would have meant the continuance of many wrongs from which we have been saved by the few who have opposed, and opposed bitterly, the wishes of the people and their representatives. The people of Germany chose Hitler and his policy; part of that policy was destruction of the Jews. The result was the greatest persecution of the medical profession which has been known for centuries. Is it suggested that because this was the will of the people and their chosen representatives the medical profession in Germany should have given it their whole-hearted support?

In conclusion I would like to state what I think should be our attitude in this matter. A State medical service may be right or wrong (unfortunately I am not yet quite certain about this). We should judge its rightness or wrongness on the following: Will it tend to lessen disease? Will it give better treatment to the diseased? Will it help the medical profession in its search for truth?

In so far as we think it will do these things we must support it and, if necessary, fight for it. In so far as we think it will hinder these things we must oppose it to the end. In making this decision there must be no expediency; there must b following the "inevitable"; there must be no uncr servience to the will of the people. Let us remember that "in our halls is hung the armoury of the invincible knights of old."—I am, etc.,

1st British Survey Regiment, R.A., S.E.A.C. EDGAR RENTOUL.

House Officers in Teaching Hospitals

SIR,—To-day, when most of our interest is focused on the improvement and reorganization of nursing and hospital conditions in general, and plans are being discussed for the improvement of undergraduate training, little is heard concerning a problem that to my mind is as needy of immediate attention as any: that of the house officer in the teaching hospital. For although we do not know what kind of a medical service we are to have in the future, nor what kind of changes will be made in the existing system, there can still be vast improvements made at the present time to meet not only the demands of the newly qualified doctors but also those of doctors being demobilized from the Forces who deserve something more than the formality of the present house job. In my opinion the training a house officer should receive is sadly neglected.

He enters the hospital unbiased, with new ideas, initiative, and a flair for research, being filled with the spirit of physiological experiment that he acquired in the laboratory. He seeks guidance and instruction, and expects the "honorary" to be his guide and his instructor; a respected teacher and not his master; a man filled with ideas like his own. Too often he ends his appointment as filled with dismay and as disillusioned as a patient who receives medicine but no sympathy or kindness.

Most house officers, however junior, have a good deal of responsibility; yet even the more senior ones often have little authority when it comes to supervising of wards or the actual nursing of the patient. This is in my opinion because "honoraries" now have so many other commitments that they let their authority slide into the hands of matrons and sisters. The result is that the house officer is placed in a ridiculous position, subservient to the sister and looked upon with indifference by the nurses, and unless his position is clarified he can never hope to inspire confidence or encourage hope as he should, even in the most morbid of his patients.

If the standard of hospital treatment for our people, and the quality of our doctors, are to keep pace with other countries, we must give the house officer more authority and supervision and encourage criticism both inside and outside the hospital. This could be achieved inside the hospital by the formation of committees of house officers and senior members of the hospital staff to meet fairly frequently and discuss current problems and suggestions that may be made towards the efficient running of the institution. The teaching of house officers could be improved by the introduction of lectures by their own and visiting specialists, and by meetings for house officers at which they can present to other house officers the interesting cases they have come across in their work. Opportunities should be made available for house officers to teach junior nurses and medical students, for in so doing they not only learn themselves but gain confidence. The performing of post-mortem examinations should be encouraged and regular pathological conferences held to check the accuracy of diagnosis. Facilities for research and studying should be provided and well-equipped laboratories for the use of the house officer.

Only by these measures and the replacement of surplus misdirected discipline and scepticism by a more humane and enterprising spirit of service to mankind will the teaching hospital produce a house officer who when he leaves does so confident that his patients will get the best of treatment if he sends them there, and at the same time is filled with the realization that the primary aim of medicine is to give the best possible treatment to the patient.—I am, etc.,

R. D. BROOKE WILLIAMS,
Surg. Lieut., R.N.V.R.

Ainsdale, Lancs.

The ordinary procedure which an insured person follows when he wishes to change his doctor is being relaxed in Scotland for the present. Instead of getting the agreement of his present doctor or else giving notice to the insurance committee a month before the end of a quarter, he need only ask the selected doctor to accept him. This does not apply to persons who are temporarily on the li[illegible] of their present doctor simply because their usual one is away [illegible]ervice unless they chose that doctor after Sept. 3, 1939. All [illegible]ople are automatically restored to the care of their usual [illegible]n he comes back. When most doctors have returned and [illegible]tice, the local insurance and panel committees will fix [illegible]ee months during which insured persons who have [illegible]nt doctor since Sept. 3, 1939, can transfer to any [illegible]her he has been on Service or not, without going [illegible] procedure.

H.M. Forces Appointments

ROYAL ARMY MEDICAL CORPS

Capt. F. Lanceley, holding a short-service commission, has been appointed to a permanent commission.

REGULAR ARMY RESERVE OF OFFICERS

ROYAL ARMY MEDICAL CORPS

Capt. A. G. Stevenson, having attained the age limit of liability to recall, has ceased to belong to the Reserve of Officers.

LAND FORCES: EMERGENCY COMMISSIONS

ROYAL ARMY MEDICAL CORPS

War Subs. Major N. G. C. Gane has relinquished his commission, and has been granted the honorary rank of Major.

War Subs. Capt. F. P. H. E. Orban has relinquished his commission, and has been granted the honorary rank of Major.

War Subs. Capts. J. M. Mair, W. Clark, and J. McKenzie have relinquished their commissions on account of disability, and have been granted the honorary rank of Capt.

To be Lieuts.: W. G. E. Eggleton, J. S. Webster, G. L. McEwan, G. A. B. Cowan, F. K. Lau, D. L. Cran, and W. E. Stuart.

ROYAL AIR FORCE

Squad. Ldrs. (Temp.) V. T. Powell and V. A. F. Martin have been granted the rank of War Subs. Squad. Ldrs.

ROYAL AIR FORCE VOLUNTEER RESERVE

Squad. Ldr. (Temp.) D. M. Wallace, O.B.E., has been granted the rank of War Subs. Squad. Ldr.

Fl. Lieut. W. M. Bennett has relinquished his commission on account of medical unfitness for Air Force service.

Flying Officers J. G. Fitzgerald, S. E. Greenhill, W. J. Moffett, and D. H. Sidebottom to be War Subs. Fl. Lieuts.

WOMEN'S FORCES

EMPLOYED WITH THE MEDICAL BRANCH OF THE R.A.F.

Flying Officers E. C. Baird and A. A. Jervis to be War Subs. Fl. Lieuts.

INDIAN MEDICAL SERVICE

Col. A. C. Macrae has retired.

Major de L. Carey to be Lieut.-Col.

Capts. S. C. Colbeck, J. H. Bowie, W. S. Empey, A. G. Miller, V. R. Damle, and T. D. Chablani to be Majors.

ARMY IN BURMA RESERVE OF OFFICERS

EMERGENCY COMMISSIONS

To be Lieuts.: B. Nyan, T. Min, T. Gyaw, B. C. Barua, R. B. Singh, B. Maung, O. Thwin, G. Singh, S. Maung, B. Thanchain, M. Gale, R. S. K. N. Menon, W. C. Tun, and B. Nyun.

COLONIAL MEDICAL SERVICE

The following appointments have been announced: V. O. Finlayson, M.R.C.S., L.R.C.P., Assistant Medical Officer, Jamaica; C. Bowesman, F.R.C.S., Specialist, Gold Coast; E. Jackson, M.B., Ch.B., Medical Officer, Tanganyika; D. Lennox, M.D., Assistant Director of Medical Services, Gold Coast; I. G. MacGregor, M.B., Ch.B., Senior Specialist, Nigeria; F. McLagan, M.B., Ch.B., Assistant Director of Medical Services, Sierra Leone; W. M. Quin, F.R.C.S., Specialist, Sierra Leone; J. G. S. Turner, M.B., Ch.B., Deputy Director of Medical Services, Gold Coast; G. R. Waller, M.B., Ch.B., Assistant Director of Medical Services, Nigeria.

DIARY OF SOCIETIES AND LECTURES

ROYAL SOCIETY OF MEDICINE.—*Tues.*, 4.15 p.m. Section of Pathology; 5.30 p.m. General meeting of Fellows. *Thurs.*, 5 p.m. Section of Dermatology. *Fri.*, 2.15 p.m. Section of Comparative Medicine.

BIRTHS, MARRIAGES, AND DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTH

CARTWRIGHT.—On Nov. 26, 1945, at her home in Ilminster, Somerset, to Lilias (*née* Matheson), the wife of Dr. W. H. Cartwright, a son.

MARRIAGE

DAVIES—RAPPORT.—On Dec. 12, 1945, at Bombay, Major David L. Davies, R.A.M.C., to Celia Marjorie Rapport, Capt., R.A.M.C

DEATH

BARK.—On Oct. 29, 1945, Ernest Gilbert Bark, aged 66, of "Cluny," Manor Road, Wallasey, Cheshire.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. D. Evan Bedford, F.R.C.P., at 1A, Upper Wimpole Street, W.1; Dr. E. R. Cullinan, F.R.C.P., at 140, Harley Street, W.1; Dr. T. Fane Tierney, at 40, Harley Street, W.1.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 22 1945

INSURANCE ACTS COMMITTEE OF THE B.M.A.

FIRST MEETING OF NEW SESSION

The first meeting of the new session of the Insurance Acts Committee was held on Dec. 6, and Dr. E. A. Gregg was unanimously re-elected to the chair. Two new members were welcomed—Dr. J. B. Bennett of Hyde and Dr. S. A. Forbes of Croydon. On a point arising out of the minutes a member referred to a case that came before the General Medical Council in July in which an insurance practitioner was charged with negligence. He understood that although the defending solicitor had stated that the case was brought before the council by the Ministry of Health, that was not so. This case, and another involving the insurance practitioner's contract, appeared to be of a new category so far as G.M.C. action was concerned. How was it they came before the council at all?

Dr. Dain, as one of the members of the G.M.C. and of its Penal Cases Committee, explained that the council was not concerned with contracts as such, but only with professional behaviour; not with immorality as such, but only with immorality in connexion with professional relationships. All convictions of various kinds were automatically reported to the council, and as the particular case referred to appeared on the reported facts to call for inquiry, the Penal Cases Committee decided that it should be properly investigated. This was done, with the result that the practitioner was not penalized. The council's duty was to see that the standards were maintained.

Remuneration of Insurance Practitioners

It was reported that the B.M.A.'s witnesses had appeared again before the Spens Committee to discuss the section of the written evidence dealing with net annual income.

The Insurance Acts Committee had before it a resolution from the Isle of Wight Panel Committee urging that the remuneration of doctors should be based on the assumption either of an adequate pension or of no pension; if the latter the remuneration must obviously be higher to enable the doctor to make his own provision. The Secretary stated that a special committee of the Association Council was considering the whole question of pensions, but it was difficult to make precise suggestions until it was known what range of service and mode of remuneration were proposed. He thought it unlikely that the Superannuation Committee would report before next March, by which time, it was hoped, the Spens Committee's report would be available. It was agreed that the resolution should be passed to the committee concerned.

The resolution of the recent Panel Conference declaring that the time was ripe for a substantial increase, long overdue, in the capitation fee was considered. The chairman pointed out that the appointment of the Spens Committee itself arose out of a similar declaration by the Insurance Acts Committee, and now the question was apparently being investigated "from the ground up," to use the phrase of Mr. Ernest Brown. The point had been pressed very strongly on the Spens Committee. It would be helpful to have some knowledge of the findings of the Spens Committee before taking action on the Panel Conference resolution. To send up a request for a hypothetical increase at the present time would not be very satisfactory.

It was agreed that the question be further considered at the next meeting of the I.A.C. in February.

At this point the Secretary read to the committee the statement made in the House of Commons by the Minister of Health half an hour earlier on compensation for medical practice.

Formation of a Guarantee Fund

The Treasurer of the National Insurance Defence Trust reported that the amount now standing to the credit of the fund was £318,595. The committee, sitting as trustees, considered the formation of a guarantee fund, and the following propositions were unanimously agreed to:

(1) That every Panel Committee be asked to make available to the Trust on demand all the funds at its disposal over and above the amount required for administrative expenses and to indicate immediately, precisely or approximately, the amount the Trust should expect to receive under this heading.

(2) That every Panel Committee that is not already doing so be urged to take immediate steps to secure contributions to the Trust from its constituents on the basis of a halfpenny a year for each insured person on their lists, in accordance with the decision to increase the Trust Fund to one million pounds.

(3) That the Insurance Acts Committee be urged to recommend the Council of the B.M.A.: (*a*) to establish an Emergency Guarantee Fund for the whole of the profession; (*b*) that the proposed Guarantee Fund be composed of predetermined contributions from the British Medical Association and the National Insurance Defence Trust, together with the amounts guaranteed by individual members of the profession; (*c*) that the amounts so guaranteed be called in only on the decision of the Council; (*d*) that the unexpended portion of the total fund be refunded to the B.M.A., the I.D.T., and the individual guarantors in proportion to the amounts contributed: (*e*) that each individual member of the profession be asked to guarantee a minimum contribution of £25; and (*f*) that the whole of the administrative expenditure in the collection of guarantees and contributions be borne by the B.M.A.

The chairman pointed out with regard to this third recommendation that it was felt that this was a matter not affecting insurance practitioners alone, and that on this question of a very large fund the proper course would be for the Council of the Association to seek guarantees from the whole profession, including consultants and those in all other branches. This fund would be built up in parts, part from the Association itself, part from the Trust, and part from guarantors in the whole body of the profession.

Fees for Part-time Regional Medical Officers

At its previous meeting the committee had expressed the view that the sessional fees paid to part-time regional medical officers should be increased, but as some of these officers are not insurance practitioners, and as it is desirable to have such fees in harmony with those paid by the Ministries of Labour, Education, and Pensions, as well as of Health, the matter was remitted to the General Practice Committee. It was now reported that the General Practice Committee had passed a resolution that the fee payable to part-time regional medical officers of the Ministry of Health should be increased to three guineas for a session of two hours. The Insurance Acts Committee concurred in this proposal, and it is to be pressed upon the Ministry.

Dispensing

The chairman stated that in view of the announcement that the Ministry had approved an increase in the dispensing fees paid to chemists, he, on behalf of the committee, had authorized an application to the Ministry for an increase in the dispensing capitation fee which would compensate dispensing doctors for the additional cost of the drugs they supplied and for the time they spent on dispensing, putting them in a position not less favourable than the chemists in this respect.

The action of the chairman was approved.

The Buckinghamshire Panel Committee had asked that dispensing practitioners be permitted to prescribe any of the drugs or appliances in the "specially expensive" list appended to the distribution scheme. On this point the Ministry had replied that it was thought that it would detract from the efficiency of the service if an insured person, who by reason of distance had difficulty in obtaining his supply from a chemis was required so to obtain it in the case of expensive

The Ministry appreciated that in present circumstances a doctor might sometimes have difficulty in obtaining some of the specified drugs, but it was to be expected that shortly the supply position would improve.

A special case which had arisen in Buckinghamshire where a practitioner, backed by the Panel and Insurance Committees, had applied for special payment for large quantities of dressings required by two patients, and his application had not been approved by the Ministry, is to be put forward again, with further details, at the next meeting of the committee with the Ministry.

The committee agreed to support a request from the Gateshead Panel Committee that test-tubes for diabetic patients for whom Fehling's solution is ordered, for the purpose of testing their own urine, and atomizers and nebulizers for use where inhalant preparations are ordered for the self-treatment of asthma, should be added to the schedule of appliances forming part of medical benefit.

Reference of Patients

Discussion again arose on the question of the reference of patients by the regional or divisional medical officer to the tuberculosis officer or other specialist. Dr. Dain pointed out that they had agreed to the intervention of the regional medical officer for one purpose only—namely, to check up their opinion as to the fitness or unfitness of the patient for work—nothing more and nothing less than that. The underlying suggestion that the regional medical officer should be a stepping-stone to the consultant's sphere could not be accepted. The position must be maintained that practitioners sent their patients for a consultant opinion when and where they thought well. It was impossible to accept a service where somebody was going to stand over them all the time at their work.

The Scottish members of the committee again put forward the special position of these officers in Scotland, where a different relationship has prevailed. The chairman said that in any further discussion on this subject with the Ministry the special position of Scotland would certainly be respected, but on the other hand he asked the Scottish representatives to appreciate the position of their English and Welsh colleagues in this matter of the regional medical service. He added that on the original and main question of reference of cases by the regional medical officer to the tuberculosis officer the profession had gained its point. What was now in question was a subsidiary issue.

A large amount of other business was transacted by the committee during a long afternoon sitting. Most of the business arose on resolutions of the recent Panel Conference and the appropriate action to be taken on them.

RETURN TO PRACTICE

The Central Medical War Committee announces that the following have resumed civilian practice: Dr. John Fleming, F.R.F.P.S., at 17, Woodside Terrace, Glasgow, C.3; Dr. J. U. Human, at 132, Harley Street, London, W.1; Mr. Cameron MacLeod, F.R.C.S., at 61, Harley Street, W.1; Mr. F. W. Roques, F.R.C.S., at 55, Harley Street, W.1; Mr. Walter Simpson, at 3, Perry Road, Bristol 1.

The Dental Board has been accumulating reserves against the emergency of demobilization, when it is expected that a large number of young people will seek to enter the dental schools. At the recent session of the Board a very liberal policy was adopted in educational grants. Grants ranging from £150 to £500 a year for five years in aid of the salaries of teachers, lecturers, and demonstrators, were offered to Queen's University, Belfast (two), the Universities of Birmingham, Bristol (two), Durham, Leeds, Liverpool (two), Manchester, and St. Andrews (two). In addition certain grants in aid of salaries of professors and other instructors were renewed for of Birmingham, Bristol (two), Durham, Leeds, Liverpool (two), Sheffield (two), and Queen's, Belfast. Although the General Medical Council and the Board have both made recommendations to the Interdepartmental Committee on Dentistry that the existing Board [illegible] superseded by a council with wider functions, it is not [illegible] that the duty of subsidizing dental education should form [illegible] functions. Therefore the Board has had to consider [illegible] on the alternative suppositions that on the one [illegible] called upon for an indefinite period to continue to [illegible] under the existing law, and, on the other, it [illegible] but not distant, date be relieved of them.

STAFFING OF MIDDLESEX COUNTY HOSPITALS

Employment of Whole-time Consultants

Middlesex was one of the first counties to introduce whole-time senior clinicians into the local authority hospital service, which it did eleven years ago. As the result of a report to the Public Health Committee of the Middlesex County Council by Dr. H. M. C. Macaulay, county medical officer of health, the system is being extended and improved. Dr. Macaulay states that his aim is that every patient shall be supervised by a consultant of a high degree of skill, an arrangement which obtains in the best voluntary hospitals. The clinical work of the Middlesex hospitals will be done by teams consisting of a senior clinician, chief assistant, and senior and junior house officers, the post of junior house officers being filled by the young practitioner who, under the Goodenough recommendations, would have to hold a house appointment for twelve months before registration. This team would be responsible for a definite number of beds, acute and chronic, with out-patients and teaching. A team for a specialty would be similarly constituted, except that both house officers would be senior. An obstetric team would be responsible for about 30 lying-in beds, about the same number of gynaecological beds, and a few antenatal beds, again with out-patients and teaching.

The senior clinician in such an arrangement would be a person of high professional attainments and capable of conducting graduate and postgraduate teaching, as it is accepted that the county hospitals will form centres of medical education and research. A starting salary of £1,200, rising to £1,800 and higher in cases of exceptional achievement, is recommended for this post. "I attach very great importance," says Dr. Macaulay, "to the inclusion by the county council in its grading scheme of this provision of additional financial reward for really outstanding clinicians in its hospital service, and in my opinion the knowledge that very exceptional merit would be so recognized would produce a most stimulating effect upon the service."

It is anticipated that those applying for the post of chief assistant will be men or women already holding a higher qualification and who aim at becoming consultants or specialists; therefore the appointment will be for a few years only. In the department of pathology there will be, according to the needs of the hospital, one, two, or three men respectively in charge of bacteriology, morbid anatomy, and chemical pathology. It is intended that there shall be at least one resident radiologist at each general hospital, and also a grade of radiological registrar, a person already possessing a diploma in radiology who wishes to become a specialist. The recommended salary of the medical director in each of the five major county hospitals commences at £1,400, rising to £2,300, with no emoluments.

The Medical Director

In a later report the Public Health Committee further discusses the function of the medical director. It is preferred that he should be a clinical director, remaining in active practice, not a non-clinical administrator. The committee rejects the idea of a lay secretary or house governor, such as is to be found in a large number of voluntary hospitals, where there is usually no senior whole-time medical man on the staff. "The county hospitals at the present time are in a state of active evolution, during which the process of building up strong medical staffs comparable with those of the teaching hospitals of the country should be in progress." When medical staffs, strong both in quality and in numbers, have been built up in all the council's hospitals the matter may be reviewed, as it may then be found that the purely medical administration could be undertaken perhaps by the chairman of the medical advisory committee and the rest of the hospital administration placed in the hands of a lay secretary or house governor.

Dr. Macaulay's report does not favour the employment of part-time specialists who, in addition to serving the local authority hospitals, engage also in private consulting practice, but he believes that in certain directions a specialist employed by the county might undertake work outside his own hospital, as, for instance, that of visiting consultant in charge of beds at some of the larger voluntary hospitals in the neighbourhood.

Postgraduate Education at County Hospitals

In a subsequent report to the October meeting of the Council the Public Health Committee suggests that arrangements be made for postgraduate education at county hospitals for medical officers released from the Forces. There are two classes of demobilized doctors for whom postgraduate facilities have to be provided. The first includes doctors recruited from large practices, for whom whole-time refresher courses require to be provided. The second includes practitioners who, on recruitment, were training to become specialists or consultants. Junior posts carrying a salary of £350 resident or senior or registrar posts with a salary of £550 resident are to be created for them. In the junior posts the officers concerned would largely perform the functions of a senior house officer, but the post would be primarily an educational one, while those holding the senior posts would carry out the duties of junior consultants and work under the supervision of the senior staff of the hospital.

Correspondence

Legal Obligations of the Practising Doctor

SIR,—Dr. G. L. Davies's protest (*Supplement*, Dec. 1, p. 123) against the almost complete silence of the profession on the severe penalty inflicted by the G.M.C. is fully justified. In the absence of full details of the alleged default it is not easy to come to any fair judgment on the case, but everyone must admit that the penalty was devastating, approximating a "death sentence." Personally I was deeply shocked by the decision and feel that a great injustice may have been done. I am sure that this feeling must be agitating the majority of the profession, yet practically no protest was lodged.

In the early days of the national health insurance service I was also deeply shocked at the vicious fines inflicted on members of that service for relatively small offences. Members of the Labour Party are never tired of professing that the B.M.A. is the strongest trade union in the country, which is, of course, fantastically untrue. No trade union would tolerate such action without the strongest possible protest and inquiry, yet the B.M.A. is dumb. The G.M.C. may be justified on the facts before them, but the profession, in the very serious circumstances, should have some knowledge of the true facts, and an appeal should be made to the B.M.A. to ascertain the exact position. Is there no appeal against this decision?

There is a dangerous lethargy among the profession, who *seem* to have no interest in the other fellow's trouble so long as the latter does not affect them personally. The same lack of interest is shown in ethical matters. An amusing and enlightening case of this occurred when doctors in one area were inflicted by a very bad instance of ethical misconduct. No interest was taken in another area until a much less reprehensible case occurred there, when immediately strong feelings were expressed. Is this the spirit in which the profession is going to meet the ordeal ahead? What an example and precedent to hold up before the gloating eyes of the present Government, who are determined to nationalize and enslave the profession, like all other members of the community, for the good of their soul and for the glory of Socialism (chaos).—I am, etc.,

Birkenhead. D. J. GAIR JOHNSTON.

SIR,—The letter of Dr. G. L. Davies is very timely. The profession will be wise to take stock of the new position. Two doctors have been brought before the G.M.C. on complaints brought by the Ministry of Health. One of them has been removed from the *Register*. The Ministry has power to remove them from the panel for breach of contract, but, from the reports, it would appear that this course was not adopted in either case. Instead, the Minister, not content to exercise his own authority, asked that they should be deprived of their livelihood.

This latest manifestation of the autocracy of the Ministry of Health must be carefully noted at this time. Many of us are tired of the tolerance shown by the profession to the "dictators" of Whitehall. The sands are running low, and Mr. Bevan, without discussion or negotiation, may at any moment present us with a *fait accompli*. Before our freedom is wrenched from us let us achieve that unity which alone will enable us with ease to resist further encroachments on private enterprise and individual liberty. We wield power possessed by no other section of the community, and the eyes of the country are upon us. Let us, while there is time, see that we are true to ourselves, for only thus can we ensure we are not false to the rights of other men.—I am, etc.,

Plymouth. C. H. HUTCHINSON.

A Forty-hour Week

SIR,—The politicians, press, and public have acted on the assumption that the medical and allied professions and occupations, as a whole, are totally unorganized. The end-result of this will be to our lasting disadvantage unless and until we, as individuals, take a more personal and active part in our own defence, and do not leave it for our leaders to act for us without knowing how much they can rely on our unswerving support for the principles they uphold in the public interest.

Any member who attends the Division business meetings of the Association, will have observed their sparseness, and the eventual reflection on the discussion at the Annual and Special Representative Meetings. It would be charitable to assume that the small attendance at Division meetings is due to the desire of the majority to put the patient first, and to give the service which they, as individuals, feel the public requires. Such a service, however, involves the practitioner who gives it in continuous "split-turn" and "spread-over" duties, which must of necessity prevent him from attending adequately to his private and business affairs.

The public, employers, and the Government have become acclimatized to the various forms of restricted labour supply and hours of work in all business and public services, and it should not be unbearable to add one more to their burden. I refer to the practical proposition of restricting our services, with reasonable exceptions and by mutual agreement, to morning consultations only, and so permit our evenings to be free, without a time limit, for collective discussion and organization. A forty-hour week and no "spread-over" can be as beneficial to us as it is to other workers.—I am, etc.,

London, N.11. RICHARD H. MOORE.

Retention of Specialists in the Services

SIR,—Before applying "the exigencies of the Services" clause when considering the demobilization of specialists would it not be wise for the Service chiefs to take stock of their available misemployed specialists? I feel that my own experiences may be of interest to others.

Before the end of the European war was even contemplated I was sent over-seas by the consultant of my branch to take up an appointment as a specialist at the command hospital. Draft notes agreed with my verbal instructions. After [illegible] pleasant voyage lasting several weeks I was removed from the troopship some days short of my destination and rushed into a general duty medical officer's post. On pointing out that I had been sent out to continue my special duties, which I had performed for over two years in England, I was told that there was no establishment for a specialist. Since then no action has been taken to rectify this error, although at least three general duty medical officers have been sent home after a few months' service here and their label has invariably been "Surplus to requirements."

I bring this forward because in all probability a full specialist is being retained in the Forces because such people as myself are grossly misemployed. During the past three months my average sick parade has fluctuated between 1 and 6 men with minor complaints. Knowing full well that victimization does occur in this particular State system I prefer to sign myself

"MISEMPLOYED."

Man-power Economy in the Navy

SIR,—I am the medical officer to an escort vessel in the East Indies fleet. It is now three months since VJ Day, and a Fleet Order has come round stating that there is to be economy in the use of medical man-power, yet well over half of the sixteen or so escort vessels on this station are still carrying medi officers. The average complement of these ships men. While I am not yet due to return home mys

Group 30, I feel that here is a place where economy might be exercised. If it is necessary for any of these small ships to carry medical officers in peacetime surely one per four ships would be sufficient. Doctors in lower age-and-service groups would then be freed to return home, and surgeon lieutenants with 4 or 5 years' service to their credit be given a chance to hold more responsible jobs.—I am, etc.,

"SURG. LIEUT., R.N.V.R."

MEDICAL WAR RELIEF FUND

SEVENTY-THIRD LIST

Individual Contributions

£105.—Mr. Talbot Cliff, through Mr. W. H. Ogilvie, London (2nd donation).

£100.—Dr. Mona Macnaughton, Newcastle-upon-Tyne (2nd donation).

£50.—Mr. H. C. Snell, Exmouth (2nd donation).

£26 5s.—Dr. Donald Hall, Hove.

£25.—Dr. Janet K. Aitken, London; Dr. R. I. Beggs, Oakengates; Dr. A. M. H. Gray, London (2nd donation); Mr. A. J. McNair, London; Prof. J. W. McNee, Glasgow; Col. A. H. Proctor, Southport (2nd donation); Dr. M. K. Robertson, Oxford (4th donation).

£21.—Dr. A. M. Valerie Bonhote, Tadworth (3rd donation); Dr. Kenneth Harris, London; Dr. Jenner Hoskin, London (2nd donation); Drs. Pretty, Notley, and Radcliffe, Kettering (2nd donation).

£20.—Dr. J. F. Allan, Bradford (2nd donation); Dr. D. T. Daintree, Bengal (5th donation); Dr. L. Colebrook, Birmingham; Dr. Margaret G. P. Reed, Cambridge (2nd donation); Dr. J. B. L. Tombleson, Bedford.

B.M.A.: Meetings of Branches and Divisions

NYASALAND BRANCH

Routine business at the annual general meeting of the Nyasaland Branch, held at Zomba on July 14, was followed by the election of officers; Dr. Bourke was elected president, Dr. Pretorius vice-president, and Dr. D. A. Baird hon. secretary and treasurer. After tea Mr. Cronyn demonstrated the following: (1) Three cases showing different types of amputation in the lower limb. (2) A case of sinus of the ethmoid region existing from an operation performed two years previously. (3) A tumour removed from the anal region of a child. (4) A case of melanotic carcinoma of the foot. (5) A case of leprosy with gangrene of the little finger. Mr. J. de Meza, Chief Veterinary Officer, Nyasaland, then read a paper on rabies and its control, which was followed by a good discussion. Problems of bilharzia in Nyasaland was the subject of a paper by Dr. Gopsill, which concluded the proceedings.

SUDAN BRANCH

At a meeting held in the Kitchener School of Medicine, Khartum, on Oct. 29, Dr. Robert Buchanan presiding, some forty-five doctors, mainly members of the Sudan Medical Service, heard Dr. James Dunlop of the Public Health Department, Glasgow, who is on a month's lecturing tour to the troops in the Middle East, describe the health organization of a large city. Dr. Dunlop said that there had been a big drop in infant mortality and a great improvement in the health of the pre-school child, who, in Glasgow, was now an inch taller and two pounds heavier when entering school life than was a similar-aged child some years back. This was [illegible]buted to the diet and to the regular wages among the poorer classes.

Many questions were asked and answered and the meeting closed with the usual vote of thanks.

BIRTHS, MARRIAGES, AND DEATHS

The charge for an insertion under this head is 10s. 6d. for 18 words or less. Extra words 3s. 6d. for each six or less. Payment should be forwarded with the notice, authenticated by the name and permanent address of the sender, and should reach the Advertisement Manager not later than first post Monday morning.

BIRTHS

BELL.—On Dec. 11, 1945, at 27, Preston Avenue, North Shields, to Dr. Jean Margery (*née* Cass), wife of Ralph Graham Bell, a son.

GARDNER.—On Dec. 10, 1945, at St. Johnstoun's Nursing Home. Perth, to Janet (*née* Addison-Scott), wife of Dr. A. Miller Gardner, a son.

WORMALD.—On Dec. 7, 1945, at Newcastle General Hospital, to Robina, wife of Capt. J. L. Wormald, R.A.M.C., B.A.O.R., a son.

SUPPLEMENT TO THE
BRITISH MEDICAL JOURNAL
LONDON SATURDAY DECEMBER 29 1945

HEARD AT HEADQUARTERS

Microscopic Prescription Forms

Complaints come from many quarters about the size and quality of the prescription form books now being supplied to insurance practitioners. Some doctors say that they cannot get the whole of what they want to write in the space provided in the form, which, if the reduction goes much further, will approximate in size to a postage stamp. The quality of the paper is also a matter for complaint, the pen often perforating it instead of marking it. The time in fact is ripe for a reconsideration of the quality and layout of these forms. If insurance doctors are to be condemned to so much form-filling there is no reason why the forms should not be as convenient as possible. This applies particularly to certificates; the recent Panel Conference called for a revision of forms of certificates, as well as for a reduction in their number if possible. There is a case for greater uniformity and convenience in such forms, and also for printing with counterfoils.

Two Bills

It is understood that as social insurance is now a completely separate Department in Government from the Ministry of Health there will be no connexion between the Social Insurance Bill and the Health Service Bill. This may be regretted from some points of view; on the other hand it may lessen complications.

All Except One

A piece of good recruiting is reported from Aberdeen, where the acting honorary secretary of the City Division, Dr. D. W. [illegible]y, who has always had a good measure of success in bringing newly qualified practitioners into the B.M.A., has succeeded in obtaining as members all but one of the September graduates of Aberdeen University. The farthest north has set an example to all honorary secretaries in Divisions which include university towns.

The Returning Practitioner

It was fully expected that there would be a full crop of problems arising out of the Protection of Practices Scheme as soon as men in any numbers return to their practices from military service. The problems do not imply that the scheme was defective or has been inefficiently worked; they arise from the infinite diversity of the circumstances from which the men went and to which they return. Three specific questions have been put by Local Medical War Committees: (1) What period should be allowed to elapse between release from the Forces and return to practice? (2) Should a practice be protected under a local scheme where the absentee practitioner does not return to the area but sells his practice? (3) Should it be protected where he has intimated that he is not returning to the area? The decision on these matters rests with the Local Medical War Committees, but the Central Protection of Practices Committee and the Council have given some guidance. They consider that the time permitted to a released practitioner to return to his practice should not be more than three months unless adequate reasons are given for further absence; that when the absentee practitioner is not returning to the area and [illegible] disposed of his practice to another doctor the latter should [illegible] considered the successor to the practice and be entitled to [illegible] benefits of the scheme; and, finally, when the absentee has not returned after three months, and no notification has been received of the sale of the practice or of intention to return, the local scheme need no longer be regarded as affording protection.

Then there is the difficult case, long foreseen, of the patient of the absentee who has been attended by the acting practitioner during the war and wants to transfer to him after the absentee has returned. A leaflet which is being sent to Local Medical War Committees administering the scheme gives some considered advice for these and for allied cases, but, briefly, it comes to this, that no departure should be sanctioned from the principle embodied in local schemes whereby the acting practitioner is bound by the terms of his undertaking—and this relates to any signatory practitioner in the area who has not been absent on war service—to refuse to accept on his own behalf any patients of an absentee until after the expiry of one year from the absentee's return. It is said that this is a restriction of the patient's freedom of choice, but the patient's freedom of choice is always conditioned by the doctor's freedom to accept or refuse the patient, and in this case the acting practitioner's attitude is determined by an agreement voluntarily undertaken. The great majority of such cases will, of course, be resolved by mutual good will.

Doctors as Business Men

It is so often assumed that doctors are lacking in business ability that it is worth putting on record a challenge to that statement by the new President of the Society of Medical Officers of Health. In a recent address Dr. Johnstone Jervis agreed that there are medical practitioners, like the old doctor in Ian Maclaren's *Bonnie Brier Bush*, who are completely indifferent to financial interests. But, then, every profession, including the Law and the Church, has a number of such men, and it is not apparent that medicine has a larger quota than the others. On the other hand, said Dr. Jervis, "anyone who has had business dealings with the average practitioner, be he consultant or general practitioner, must have sensed the existence of a strongly developed bargaining propensity and a possessive instinct unsurpassed by any other class or profession." The members of the profession will scarcely feel themselves complimented, and would probably prefer to be thought of as unbusinesslike rather than commercial and grasping. Surely the truth is that business ability is one thing, and "the possessive instinct" is something different which may go with business ability or may not.

Administrative Capacity

What Dr. Johnstone Jervis was leading up to, however, in his remarks on the business-like habit of the majority of doctors was in praise of the medical man as an administrator. There has grown up even in the profession itself an idea that medical men usually make poor administrators, or, if they should make good ones, it is at the sacrifice of their medical skill. There have been medical men in whom administrative capacity amounted to genius—names, past and present, could be quoted by the score—and it has not been proved that on that account they have been less good doctors. Dr. Jervis claimed for the public health departments of local authorities in this country that, taken as a whole and judged by the strictest standards, they were well administered, at least as well administered as any other departments of the town or county hall. It is important to stress this point because in the new National Health Service, whatever form it takes, administrators will be needed, and as the service will consist of a large number of institutions, hospitals, clinics, health centres, and so on, all medical in character, and each with its staff of doctors, it seems obvious that the integration of so many varying elements calls not only for administrative capacity in the ordinary sense, but for a knowledge of technical detail to be found only [illegible] those who have had a basic medical training.

Correspondence

Emergency Reform of Representative Body

SIR,—It would appear that proposals are being made in certain quarters that a Special Representative Meeting should be summoned on the requisition of 20 constituencies, as provided in By-law 46 (i), with a view to the alteration of the Articles and By-laws to give effect to the suggestions contained in Dr. Balck-Foote's letter in the issue of Dec. 15 (p. 131). It appears to me that the procedure which the proposers seem to have in view is governed under the terms of By-law 75 as it stands.

In view of the probability that there will be more than one Special Representative Meeting during 1946 to consider the proposals of the Minister of Health, it is important that an additional meeting should not be held if in any way it can be avoided.—I am, etc.,

Downton, Wilts.

J. C. MATTHEWS,
Chairman, Regulations and Standing Orders Subcommittee, 1932-44.

*** By-law 75 is as follows: "The Representative Body and the Council shall respectively have power to appoint Committees with such powers as may to them seem necessary or convenient, and to fix the quorum thereof and lay down Rules for regulating the proceedings of such Committees."—ED., *B.M.J.*

Medical Certification

SIR,—The number and variety of the certificates required from doctors are, like queues, part of the nightmare of the times. But I am sure the general public miss the point of our protests; we grumble about having to give so many certificates, but what really troubles us is the fact that so many have to be refused. Every time a doctor refuses a certificate it involves him in a conflict of some sort. In the first place there is the effort required to weigh up the pros and cons, and the tiresome struggle with his conscience; and, secondly, there is the conflict with the patient, which may be almost nothing, or it may be an extremely unpleasant and exhausting dispute.

We know well enough that, rather than give an unsound certificate, we must quarrel with our patients, but we are not at all satisfied that the certificates are always necessary—for example, certificates for [illegible]rsets. But that is not my point; there is a much more [illegible] consideration. There is a danger of a run on the doctors rather like a run on the banks. It is obvious that if the doctors were to hand out certificates to all who asked for them there would be a calamitous breakdown in the supply of coal, milk, eggs, etc., and in the national health insurance system. In the end the whole of our social security depends on the integrity of the family doctors. But if the public want a high standard of certification the doctors are entitled to demand a high standard of integrity on the Government side. We do not demand anything superhuman; we did not make trouble four or five years ago when every doctor in the country could have supplied instances of mistresses who were told by Ministry of Labour officials that if they wanted to get exemption for their maids all that they had to do was to get a medical certificate. Minor officials still push the responsibility of refusal on to us. But the state of affairs is much more serious now because the practice is winked at by the authorities.

Recently it was widely reported in the press that Miss Jenny Lee had tried to get a man in her constituency out of the Army. She told the House of Commons that as a last resort she had suggested to the man's father that he should get a medical certificate. Miss Lee admitted in the House that it was a case of fraud; and with engaging naivety added that she had been honourably refused. And it was left at that. The fact that there was no storm of protest from M.P.s is easily explainable. [illegible] is so serious is that there has been no overwhelming [illegible] from the medical profession for the removal from [illegible] (if not the decapitation) of Miss Jenny Lee. Do the [illegible] profession imagine that we general practitioners [illegible]uptible saints, or do they imagine that we have [illegible] it just that they are too busy squabbling among [illegible] correspondence columns of the *Times*? [illegible] Sir, for help and encouragement from the [illegible] extremely difficult, distasteful, and often unnecessary work of certification. We do not ask for any My point is simply that if you want a high standard of ce tion you will have to insist on a much higher stand Government circles.—I am, etc.,

Wetherby.

R. L. KITC

The Case for Private Practice

SIR,—Like Drs. Leyton, Boyd (*Supplement*, Dec. 8, 22 and others I have been greatly surprised at the apparen bl ness of reaction on the part of members of the B.M. as whole to the extremely suggestive article entitled "Th Cas for Private Practice," by Dr. J. Campbell Young (*Supplemen* Oct. 20, p. 87). Is this a case of soft pedalling or is it, as were, a delayed-action bomb? The silence of the execu can more easily be accounted for by the fact that it is al committed to the principle of a centrally controlled service. it has no intention of altering this policy until it is forced t do so by members of the Association.—I am, etc.,

Bexley, Kent.

E. U. MACW M.

Terms, then Conditions

SIR,—In connexion with the proposed medical servic the threatened annexation of our practices there are so points which would seem to be of importance to the gener practitioner.

1. When a person applies for a job he usually wants to what remuneration is offered. Upon that depends whether is willing to undertake certain conditions and hours of The more the remuneration obviously the more he is will undertake. Surely the same should apply to our own p to some degree. It seems to be absurd to negotiate ditions of service, etc., without knowing in the least wh financial side of the bargain.

2. If our practices are to be nationalized (I leave questions of the pros and cons as there are supporters o different methods of organization), then surely we shoul that the ruling authority, whoever that eventually should also accept all the extraneous responsibilities viding surgery accommodation and necessary staff for it in order, drugs, bottles, pill-boxes, etc., door-mats, s etc.; and all travelling facilities (the purchase tax o car would then be their affair) necessary to carry out th As it is, in very many doctors' households the wif answer the door, be surgery cleaner, etc., as well as r home when the doctor is out. Such a thing as an ev together seems to be almost a thing of the past.

If we are to be virtual civil servants then let us have the amenities of other civil servants and let our rem be real remuneration and not some problematical sun ing upon how cheaply we can manage our affairs.—I

Middlestown.

CHARLES H.

The Question of Rank

SIR,—May I add my small say to the vexed problem o conditions as they affect me directly. I returned to after five years' service over-seas. While in S.E.A.C. an Acting Lieutenant-Colonel—i.e., A/Lieut.-Col., T and W.S. Captain. I was posted to the B.A.O.R. a having retained my acting rank for one month after e tion and temporary rank for two months. In the B.A found myself junior in rank to officers who had les than I. To the question, "Are you happy in the Se my answer will inevitably be "No," because we are to everything possible will be done to ensure that heroes N.W. Europe campaign do not make way for older coming from other theatres.

I speak as an emergency-commissioned officer, bu officers are affected equally. My C.O. is three years service to the A.D.M.S., both are regulars, and his demeanour is that he, like myself, came home u "Python" scheme. We are told that [illegible] future polic make the Army a reasonable career [illegible] can the authoritie expect serving emergency-commis[illegible] officers to accep regular commissions when these inco[illegible] are allowe to continue?

Congress of Physical Medicine in recognition of his contributions in this field.

Dr. R. J. Goldacre, Ph.D., has been appointed to the London University readership in cell physiology, tenable at the Institute of Cancer Research, Royal Cancer Hospital.

COMING EVENTS

William Meredith Fletcher Shaw Lecture.—Dr. T. F. Corkill will lecture on "New Zealand's Debt to British Obstetrics," September 23, 5 p.m., at the Royal College of Obstetricians and Gynaecologists. Tickets from the Secretary of the College.

Middlesex Hospital Medical School.—Week-end course for former Middlesex men, September 30 (starting 2.15 p.m.)—October 2. Annual dinner at the Savoy Hotel (7 for 7.30 p.m.), September 30. Further information from the Medical School Secretary, the Middlesex Hospital, London W.1.

Institute of Diseases of the Chest.—Clinical demonstrations, open to medical practitioners without fee, in the lecture room of the Institute (in the grounds of the Brompton Hospital, Fulham Road, London S.W.3) on Fridays at 5 p.m. from September 30 to December 16.

Cambridge University Medical School.—Details of postgraduate courses for general practitioners during the academic year October 1, 1960, to July 31, 1961, are now available from the Secretary, the Medical School, Tennis Court Road, Cambridge.

Medical Faculty, Birmingham University.—Mr. L. Farrer-Brown will deliver the inaugural address at 3 p.m. on October 3.

Medical Defence Union.—Annual general meeting, 3.15 p.m. on October 4 at Tavistock House South, Tavistock Square, London W.C.1.

Royal Free Hospital School of Medicine.—Inaugural address: Sir Ifor Evans, October 5, 3 p.m., at the Senate House, London W.C.1.

Symposium on Cancer.—Week-end course, October 14–15, for consultants, S.H.M.O.s, and senior registrars, on recent advances in treatment, diagnosis, and research on cancer. Tickets (free) and information from the secretary, Institute of Cancer Research, Royal Cancer Hospital, 33 Sumner Place, London S.W.7.

Faculty of Radiologists.—Provincial meeting in Cardiff, October 15. Details from the Faculty, 47 Lincoln's Inn Fields, London W.C.2.

British Postgraduate Medical Federation.—Professor C. H. Waddington, F.R.S., will deliver the inaugural lecture of the 1960–1 series on the Scientific Basis of Medicine on October 20 at 5.30 p.m., at the Senate House, London University. His subject will be "The Significance of Developmental Biology."

Harben Lectures.—Professor R. A. Kehoe, department of preventive medicine and industrial health, Kettering Laboratory, Cincinnati University: "The Metabolism of Lead in Health and Disease." Three lectures, October 25, 26, 27, all at 5 p.m. Details from Royal Institute of Public Health and Hygiene, 28 Portland Place, London W.1. Admission free.

Sydney Watson Smith Lecture.—Sir Stanley Davidson will lecture on "Anaemia and Operations on the Gastrointestinal Tract" at the Royal College of Physicians of Edinburgh on October 26 at 5 p.m.

Wessex Rahere Club.—Autumn dinner, October 29, at the Grand Spa Hotel, Clifton, Bristol. Details from Mr. A. Daunt Bateman, F.R.C.S., 11 The Circus, Bath.

Conference on Accident Surgery.—Details of a conference, November 30 to December 2, arranged jointly by the Universi[illegible]lasgow and the Royal Faculty of Physicians [illegible], are given at p. 64 of the advertisements.

University College Hospital Medical School.—Programme of postgraduate demonstrations, October 27, 28, including annual dinner Savoy Hotel, Strand, London W.C.2, October 28, 7 for 8 p.m. Details from Honorary Secretary, U.C.H. Old Students' Association, University Street, London W.C.1 (Tel. EUS 5861).

SOCIETIES AND LECTURES

A fee is charged or a ticket is required for attending lectures marked ●. Application should be made first to the institution concerned.

Thursday, September 29

London Jewish Hospital Medical Society.—At 11 Chandos Street, W., 8.30 p.m., presidential address by Dr. David Preiskel: Physiotherapy.

Friday, September 30

Institute of Diseases of the Chest.—5 p.m., Dr. J. Smart: clinical demonstration.

Institute of Laryngology and Otology.—3.30 p.m., clinical discussion for general practitioners. Mr. A. S. Walker: Prescription of Hearing-aids.

Society of Chemical Industry: Fine Chemicals Group.—At Alderley Park, Cheshire, 2 p.m., symposium: Drugs for the Treatment of Hypertension.

Saturday, October 1

Cambridge University Medical School.—At Lecture Room "B," Addenbrooke's Hospital, Symposium on Haematology. Morning: 10.30 a.m., Dr. D'A. Kok: Clinical Diagnosis of Blood Disorders; 11.30 a.m., Dr. D. G. Chalmers: Use of Laboratory Services in Haematology for the General Practitioner; 12.15 p.m., Dr. F. G. J. Hayhoe: Treatment of Common Anaemias. Afternoon: 2.30 p.m., Dr. E. Davidson: Investigation and Treatment of Haemorrhagic Diseases; 3.30 p.m., Dr. C. B. V. Walker: Practitioner and the National Transfusion Service.

North-east Metropolitan Thoracic Society.—At Papworth Hall, Cambridge, 10.30 for 11 a.m., joint meeting with East Anglian Thoracic Society. Papers by Dr. Audrey Hanson, Dr. R. A. Bruce, Dr. D. J. Lawless, and Dr. H. A. Fleming.

North of England Otolaryngological Society.—At Bolton, 2 p.m., 14th annual and 40th ordinary meeting.

APPOINTMENTS

North-west Metropolitan Regional Hospital Board.—A. E. Carter, M.B., B.S., F.R.C.S., Consultant Surgeon, King Edward Memorial Hospital and Clayponds Wing; D. E. Bolt, M.B., Ch.B., F.R.C.S., Consultant Surgeon, West Middlesex and South Middlesex Hospitals; Dinah C. M. Henderson, M.B., Ch.B., D.M.R.D., Consultant Radiologist, Edgware General and West Hendon Hospitals; D. R. Sweetnam, M.B., B.Chir., F.R.C.S., Consultant Orthopaedic Surgeon, King Edward Memorial Hospital (including Clayponds Wing); A. E. Richardson, M.B., B.S., F.R.C.S., F.R.C.S.Ed., Consultant Neurosurgeon, Whittington Hospital; J. F. Hare, M.B., Ch.B., M.R.C.P., Assistant Physician (consultant grade), Windsor Group Chest Clinic and Canadian Red Cross Hospital; K. Bobath, M.D., D.P.M., Consultant Psychiatrist, Harperbury Hospital (new Cerebral Palsy Unit).

BIRTHS, MARRIAGES, AND DEATHS

BIRTHS

Porteous.—On September 6, 1960, at Liverpool Maternity Hospital, to Myfanwy (formerly Dr. Roberts), wife of Dr. Colin Ross Porteous, a son.

DEATHS

Bendle.—On August 27, 1960, at his home, 20 Littlemoor Road, Preston, Weymouth, Dorset, William George Bendle, M.B., F.R.C.S.Ed.

Black.—On August 20, 1960, the result of a road accident, Alfred Black, L.R.C.P.&S.Ed., L.R.F.P.S., of 7 Beresford Drive, Woodford Green, Essex, formerly of 97 Browning Road, Manor Park, London E.

Eckford.—On August 21, 1960, at The Rosery, Garfit's Lane, Boston, Lincs, Alan Eckford, M.D., D.Obst.R.C.O.G.

Graetz.—On August 16, 1960, at Woodside Road, Lockwood, Huddersfield, Gerhard Herman Arnold Graetz, M.B., B.Ch., aged 56.

Grant.—On August 20, 1960, Montagu Frederick Grant, M.D., D.P.H., Colonel, late R.A.M.C., retired, of Bredon House, Bredon, Tewkesbury, Glos, aged 82.

Hutchinson.—On August 22, 1960, at Whipps Cross Hospital, London E., Michael Lincoln Hutchinson, M.R.C.S., L.R.C.P., aged 59.

Hyman.—On August 22, 1960, Morris Hyman, M.B., Ch.B., of 34 Cedra Court, London N.

Neville.—On August 16, 1960, at Hill End Hospital, St. Albans, Herts, Norman Alan Neville, B.M., B.Ch., M.R.C.P., of 9 Westfield Road, Hertford, Herts, aged 46.

Oxley.—On August 17, 1960, in Kent and Canterbury Hospital, James Charles Stewart Oxley, F.R.C.S.Ed., Lieutenant-Colonel, I.M.S., retired, of 138 Dover Road, Walmer, Kent.

Pennington.—On August 19, 1960, at the Memorial Hospital, Henley-on-Thames, Oxon, Drury Pennington, M.B., B.Ch., aged 85.

Pike.—On August 26, 1960, at the Queen Elizabeth Hospital, Birmingham, Warwicks, John Donald Pike, M.B., Ch.B., of Applebeck, Streetsbrook Road, Solihull, Birmingham.

Primrose.—On August 16, 1960, at Dalchalm, Brora, Sutherland, Dorothy Anderson Primrose, M.B., Ch.B.

Richardson.—On September 16, 1960, at his home, The Holt, Gerrards Cross, Bucks, Sir Albert Victor John Richardson, K.B.E., C.B., M.B., B.Ch., D.P.H., Air Marshal, R.A.F., retired, aged 7[illegible].

Robertson.—On August 24, 1960, at Ravenswood, Whalley, near Blackburn, Lancs, Guy Scott Robertson, M.B., Ch.B., aged 60.

Russell.—On August 26, 1960, at Kirkhill Cottage, Newton Mearns, Renfrewshire, James Russell, C.B.E., M.B., F.R.C.S.Ed., F.R.F.P.S., late of Glasgow.

Symons.—On August 20, 1960, at King Edward VII Hospital, Windsor, Berks, William John Francis Symons, M.B., B.Ch.

Woodhouse.—On August 18, 1960, at Plymouth, Devon, Guy Walker Woodhouse, M.R.C.S., L.R.C.P., Surgeon Captain, R.N., retired.

Any Questions ?

We publish below a selection of those questions and answers which seem of general interest. It is regretted that it is not possible to supply answers to all questions submitted.

Chlorination of Swimming-baths

Q.—*Is there any risk of direct chemical damage to the conjunctiva or of causing increased susceptibility to local infection when water in a swimming-bath is over-chlorinated?*

A.—Over-chlorination, although causing slight discomfort, is unlikely to cause any significant damage to the eyes, and there is no evidence to suggest any increased susceptibility to local infection.

Monilial Vulvitis and Carcinoma

Q.—*Is there a risk of malignant changes occurring in pruritus vulvae due to chronic intestinal moniliasis?*

A.—Intestinal moniliasis does not usually cause pruritus vulvae unless it results in infection of the vulva itself. A special association between monilial vulvitis and carcinoma is not described. Nevertheless, some authorities take the view that any long-standing skin lesion of the vulva, and especially one which causes scratching, can ultimately result in malignant change. Considering the frequency of pruritus vulvae and the rarity of carcinoma vulvae the risk, however, must be small.

Excluding Noise

Q.—*Is there an ear-plug or any other appliance which is more effective in excluding noise than cotton-wool packed into the external auditory meatus?*

A.—Yes, there are many. First, there are many proprietary makes of ear-plugs on the market. These are made in a variety of materials—rubber, plastic (soft or firm), and even metal. They are worn by insertion into the exterior auditory meatus. Secondly, there are several ear-defenders designed for and used in noisy industries, including aviation, when it is associated with jet aircraft engines. These are worn like earphones and have large ear-encasing acoustic domes with malleable or fluid-filled rims. Thirdly, there is the so-called "bone dome" used by Service and certain civil aircraft pilots. This consists of a rigid helmet encasing the head with special ear-protecting pads.

Contact with Leprosy in Infancy

Q.—*A baby was separated from his mother at the age of 10 days and was taken into an institution. During the 10 days he was breast-fed. Three months later the mother was found to have leprosy. Bacilli were found both in her nasal secretions and in the blood around her skin lesions. So far as it can be assessed, there were no suspicious signs until two and a half months after delivery. The baby, now aged 6 months, is clinically normal. Is it possible to forecast the baby's future? What investigation should be done, and is any prophylactic treatment necessary?*

A.—While it is claimed that children are more susceptible to leprosy than adults, the incidence of leprosy amongst children who have been separated from infective parents before they were 6 months of age is so extremely rare that it can be taken that the chances of a child acquiring the disease after having been separated from an infective mother at 10 days is so infinitesimal that the risk can be discounted. So far as I know, there are only two cases on record in which leprosy has been described in children under 6 months. It must be remembered that the natural immunity to leprosy is very high indeed, and that even when children have been kept with an infective mother for as long as eighteen months the incidence of leprosy in the child is again very low. Therefore so far as this child is concerned I do not think there is any cause for concern.

With regard to the possibility of forecasting the baby's future acquirement of the disease, this would be very difficult. All one can say is that the average latent period in leprosy is one to three years, and if no signs of the disease have appeared within a period of five years one can conclude, I think, that the child would not show any signs of infection in later life.

With regard to possible investigations, workers in Bombay have found that in certain instances evidences of an early infection can be demonstrated in contacts of open cases of leprosy. An investigation that could be done would be to take a small biopsy from the skin of the back of the child and have it fixed under what is termed the hyalase technique. The area to be biopsied is injected intradermally with procaine and hyalase (1 ampoule of crystalline hyalase to 2 ml. of procaine). Then the physician waits not less than 10 minutes and not more than 20 minutes and performs a small biopsy. The tissue then is fixed in neutral formalin and despatched to a laboratory, where special investigations can be undertaken with reference to the condition of the nerves in leprosy. But the chances of any definite evidence of infection are so slight that I think that this is hardly worth while.

I would not recommend any prophylactic treatment, for in this case it would mean a course of treatment which should extend for a period of five years—that is, until the child is 5. A prophylactic dose of sulphones in a case of this type would be 10 mg. dapsone (diamino-diphenyl sulphone) twice a week for one month, then 25 mg. of dapsone twice a week until the child is aged 5. Then all treatment could be stopped. A step which could be taken would be to vaccinate the child with B.C.G., since it is generally considered that a positive lepromin reaction is more valuable than a negative. It is probably impossible to secure lepromin in this case, and therefore I would suggest that the child be vaccinated with B.C.G.

Finally, I think, because of the extreme rarity of infection at so low an age, that apart from examining the child every six months for the next three to five years no further steps need be taken.

A leading article on modern treatment of leprosy was published in a recent issue of the *Journal* (August 27, p. 655).

Up on the Points

Q.—*At what age should a child learning ballet dancing be allowed to "go up on her points"? Is it likely to be inadvisable in a child aged 10?*

A.—I do not think that we know the answer to this. I personally cannot see any reason for setting an age limit, and I am sure 10 years of age would be quite safe.

Collected Articles from the "British Medical Journal"

The following books are available through booksellers or from the Publishing Manager, B.M.A. House. Prices, which include postage, are now the same for both inland and overseas.

Refresher Course for General Practitioners, Volume 3 (26s. 9d.).
Clinical Pathology in General Practice (22s. 3d.).
Any Questions?, Volume 3 (8s. 3d.).

All communications with regard to editorial business should be addressed to THE EDITOR, BRITISH MEDICAL JOURNAL, B.M.A. HOUSE, TAVISTOCK SQUARE, LONDON, W.C.1. TELEPHONE: EUSTON 4499. TELEGRAMS: *Aitiology, Westcent, London.* ORIGINAL ARTICLES AND LETTERS forwarded for publication are understood to be offered to the *British Medical Journal* alone unless the contrary be stated.

Authors desiring REPRINTS should communicate with the Publishing Manager, B.M.A. House, Tavistock Square, W.C.1, on receipt of proofs. Authors overseas should indicate on MSS. if reprints are required, as proofs are not sent abroad.

ADVERTISEMENTS should be addressed to the Advertisement Director, B.M.A. House, Tavistock Square, London, W.C.1 (hours 9 a.m. to 5 p.m.). TELEPHONE: EUSTON 4499. TELEGRAMS: *Britmedads, Westcent, London.*

MEMBERS' SUBSCRIPTIONS should be sent to the SECRETARY of the Association. TELEPHONE: EUSTON 4499. TELEGRAMS: *Medisecra, Westcent, London.*
